

ABSTRACT

TIME INFORMATION BASED AUTHENTICATION METHOD, INTEGRATED CIRCUIT FILM, SIM CARD OR SD CARD

A time information based authentication method, an integrated circuit
5 film or with a SIM card or a SD card are provided. The time information
based authentication method comprises the following steps. A time
information is obtained from a external device. A data is received from a
memory unit of a security chip. An authentication code is generated
according to the data and the time information.
