PLASTIC COMPOSITE WITH IMPROVED PHYSICAL PROPERTIES

ABSTRACT

Disclosed herein is a plastic composite capable of eliminating property deviations in the same plastic composite by lowering a content of a glass fiber contained in a LFI layer and improving properties of the plastic composite. The plastic composite according to present invention comprises a face sheet layer, a reinforcement layer formed on an upper surface of the face sheet layer and including a first glass fiber and polyurethane foam, and a LFI layer formed on an upper surface of the reinforcement layer and including a second glass fiber and a polyurethane foam.
