(54) Title: FLEXIBLE BAKEWARE

(57) Abstract: A flexible bakeware compound includes an addition-cured sil-
icone polymer with approximately 0.1 to 15 weight percent of polytetraflu-
oroethylene. More specifically, the compound preferably includes a methyl
vinyl silicone polymer from about 40 to 70 weight percent, a filler from about
5 to 50 weight percent, chloro platonic acid from about 0.1 to 5 weight percent,
and polytetrafluoroethylene in an amount of about 6 weight percent. A flexi-
ble bakeware container is also provided that includes a receiving channel in a
shoulder of the baking container. A carrier is received by the receiving channel
to add rigidity to the shoulder, thereby enabling a user to more easily carry the
flexible baking container.
