

Abstract

This invention publicizes a type of communication information transmitting process and system, which belongs to the filed of communication technology. Said process comprises: acquire selected fingerprint information of communication
5 information receiving terminal, makes use of said fingerprint information of communication information receiving terminal to conduct identity authentication; After identity authentication of communication information receiving terminal is successfully completed, acquire communication information input by the user; wherein, said communication information comprises E-mail or SMS; transmit said
10 communication information to FingerQ Information Exchange Platform, which encrypts communication information, and transmit encrypted communication information to said communication information receiving terminal. Said system comprises: communication information transmitting terminal and FingerQ Information Exchange Platform. This invention makes communication information
15 not easily be acquired by a third party; moreover acquired communication information is encrypted with high degree of safety.
