(54) Title: RETICULATED MATERIAL BODY SUPPORT AND METHOD

(57) Abstract: A body support comprising a top layer of flexible visco-elastic material having an exposed convoluted top surface is disclosed. The flexible visco-elastic material can have a reticulated or non-reticulated cellular structure. In some embodiments, one or more other layers of the body support comprises reticulated visco-elastic foam, and can have at least one material property responsive to temperatures in the range of a user's body heat. In these and other embodiments, one or more of the other layers of flexible material comprises non- visco- elastic foam, and can be combined in a body support with one or more layers of visco-elastic foam. The body support can include one or more layers of other material types, including one or more layers of high-resilience polyurethane foam.
