

ABSTRACT

5 Provided are a visual interface display method and apparatus, an electronic device, and a storage medium. The display method includes determining that a target vehicle executes a driving task (S101); displaying a map within a preset range according to the real-time position of the target vehicle (S102); displaying a first object model for a first object detected by the target vehicle on the map; and displaying a second object model including at least point cloud data for a detected non-first object (S103).
