ABSTRACT OF THE DISCLOSURE (FIG. 3)

5 "CRT TYPE PROJECTION DISPLAY APPARATUS AND  
METHOD FOR EFFECTING A COLOR CORRECTION ON  
THE CRT TYPE PROJECTION DISPLAY APPARATUS"

A CRT type projection display apparatus has  
a plurality of CRT's supplied at their cathodes with  
primary color video signals and displays an image  
projected from the respective CRT's on a screen.  
10 The apparatus includes a separation portion (43) which  
separates synchronizing signals from an input video  
signal, a correction signal generating circuit (11 to  
16) which generates a correction signal for correcting  
any uneven color on the screen through the utilization  
15 of the synchronizing signals, a control circuit (17,  
18) which controls the correction signal according  
to the luminance level of the primary video signal  
supplied to the CRT, and a supply section (19 to 24)  
which supplies the controlled correction signal to  
20 a first grid or second grid of the respective CRT and  
correct an uneven color on the screen caused by the  
respective CRT's.
