ABSTRACT

RECORDING MEDIUM, DATA VERIFICATION METHOD, AND DATA VERIFICATION DEVICE

Provided are a recording medium, a data verification method, and a data verification device capable of enhancing the reliability of information to be described in a document and outputting it. A computer-readable recording medium stores a data verification program that causes a computer (100) to execute a process (134) of specifying, out of a plurality of sites registered as acquisition sources of specific information, the reliability of the site from which the information was acquired as the specific information based on storage content of a storage unit (120) that stores therein the reliability in association with each of the sites. The computer-readable recording medium stores the data verification program that causes the computer to execute a process (135) of outputting the information acquired as the specific information together with the specified reliability.
