

ABSTRACT

An embodiment of the present invention provides a catering and cooking device, a cooking system, and a user terminal. The catering and cooking device includes a machine body, a heating unit and/or a flow control unit, a control unit electrically connected to the heating unit and/or the flow control unit to control the heating unit and/or the flow control unit, and a network communication unit electrically connected to the control unit to receive processing process information to control water outlet time of a water reservoir. The catering and cooking device of the present invention receives processing process information corresponding to food via the network communication unit, controls the flow control unit to add liquid such as water or oil according to the received processing process information, and then controls the heating unit to heat according to a preset power map and heating time, the present invention can process different foods in a targeted manner, can achieve the best cooking effect of the different foods, has a simple structure and can process and cook the food via a memory system more conveniently and quickly.
