ABSTRACT

A lift truck 100 includes a self-propelled truck body 120 having a cabin 110 at the front, a box-type cargo bed 140 provided so as to be elevated with respect to the truck body 120, and a platform 200 fixedly held on the work bed at a position at which a floor surface 210f coincides with the floor surface of the box-type cargo bed 140. The platform 200 is constructed so that a slit 211, which is open toward both sides, is provided on a front face 210t of a connection platform 210; a projecting portion 222 of a main platform 220, which has a width narrower than that of the slit 211, is inserted in the slit 211; a main portion 221 of the main platform 220 is supported by an extension portion 214 provided on the front face 210t of the main platform 210; the main platform 220 is provided with extension platforms 230 and 240 capable of being pulled out of and stored in the front face of the main platform 220 in the longitudinal direction; a chamfer portion 230c is formed on the extension platform 230; and an extension platform 250 capable of being pulled out of and stored in the front face of the chamfer portion 230c is provided.
