(54) Title: SECURE REMOTE TRANSACTION FRAMEWORK USING DYNAMIC SECURE CHECKOUT ELEMENT

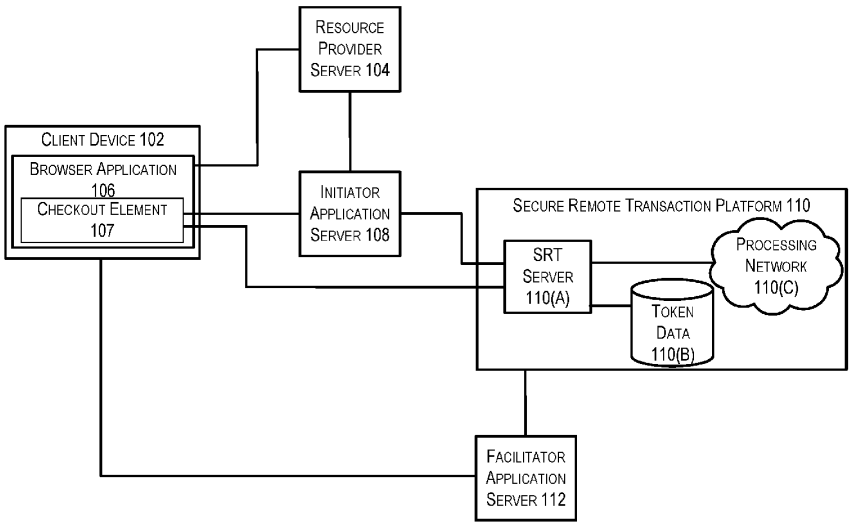

FIG. 1

(57) Abstract: Embodiments of the invention are directed to systems and methods of providing secure remote transaction (SRT) transactions. In some embodiments, a resource provider is able to embed a checkout element into a webpage that it hosts. The checkout element enables interaction between a user that has accessed the webpage and an initiator application server located remotely in order to complete a transaction while preventing the resource provider from gaining access to sensitive information. In some embodiments, the user's information may be determined by an initiator server and populated into the checkout element.
