

DATA SENDING METHOD, DATA RECEIVING METHOD, DATA SENDING APPARATUS, AND DATA RECEIVING APPARATUS

ABSTRACT

Embodiments of this application disclose a data sending method, a data receiving method, a
5 data sending apparatus, and a data receiving apparatus, so as to improve reliability of data
transmission in a flexible Ethernet group. The data sending method includes: A sending device
determines a plurality of non-faulty physical channels from a plurality of physical channels; the
sending device splits and encodes to-be-sent data to obtain a plurality of encoded data segments;
and the sending device transmits the plurality of encoded data segments through the plurality of
10 non-faulty physical channels.
