Abstract:

Preparations whereby reduction or acceleration of the eliminative ability of the stomach can be noninvasively evaluated: and a method of evaluating the eliminative ability of the stomach by using these preparations. Thus, reduction or acceleration of the eliminative ability of the stomach can be safely and conveniently examined. Namely, theses preparations are useful in objectively diagnosing the motor function of the stomach, as well as in evaluating and judging the drug effect or therapeutic effect of a drug concerning the motor function of the stomach on individual patients.
