ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: CLASP FOR EYEGLASSES

(57) Abstract: An eyeglasses clasp for maintaining eyeglasses on a cloth material. The clasp comprises magnetic means (106, 108) engaged with the eyeglasses temple bars (100, 102) and aligned with the eyeglasses frame body (104) midpoint when the temple bars are closed. The magnets are in attractive magnetic communication when the temple bars are in closed position. The clasp is used by pivoting one of the temple bars into the closed position. The frame body and closed temple bar are then positioned on one side of a clothing material. The second temple bar is the pivoted into the closed position such that it is on the other side of the clothing material. With the temple bars closed, the magnets are in attractive magnetic communication and impart a gripping force on the article of clothing. The gripping force substantially prevents relative movement between the temple bars and the clothing material.
