

ABSTRACTA PANEL SYSTEM AND A PANELLING MEMBER THEREFOR

A panel system, particularly a false ceiling is constructed
5 from a plurality of elongate panelling members arranged side by
side. Each panelling member comprises three elongate slats (1,
2, 3) arranged side by side and joined by flexible tape (4)
along adjacent edges. When laid out flat the panelling member
may be coiled or easily stored but for installation in a
10 ceiling the outside slats are folded perpendicular to the
central slat so as to provide the necessary rigidity.
