(54) Title: METHOD AND APPARATUS FOR TRANSMITTING AND RECEIVING WIRELESS PACKET

(57) Abstract: A wireless packetization apparatus for transmitting/receiving multimedia data including video data in a radio transmitting/receiving system, and a method thereof are provided. According to the present invention, error resilience can be increased by adding error protection codes to one portion and a plurality of portions of multimedia-related header information, respectively, when multimedia data such as video data requiring real time or low delay are transmitted and received in a wireless environment, and a packet drop rate can be thereby reduced. Also, information can be more precisely recovered by inserting length identifier and length information on an information region into the header.
