

ABSTRACT

A package for contact lenses is disclosed. The package may include a body defining an inner volume and a cover extending over an opening when being closed. The package may also include at least one removable section connected between the cover and the body such that after its removal or in its absence the lid portion would be able to open and expose the inner volume of the body. The package can be reclosed by fitting at least one tab into a corresponding groove. A package with at least one attaching element for resealing the inner volume is also disclosed.
