

FLOATING STRUCTURE PROVIDED WITH LIQUEFIED GAS STORAGE FACILITY

ABSTRACT

Provided are floating structures 1A-1E provided with a liquefied gas storage facility, the structures each having a cargo area R1 and an engine room 5 in the rear of the cargo area R1, and having a portion or all of an accommodation space 8 provided on an upper deck 4, wherein a cargo equipment room 12 is arranged in the rear of the cargo area R1 and the cargo equipment room 12 is arranged on a portion or the entirety of the upper side of the engine room 5. Consequently, while mitigating risk due to a high-pressure gas leak of a fuel gas pipe, a space in which new cargo loading and unloading facilities, new superstructures, or new large-scale fittings can be additionally arranged is ensured in the floating structures 1A-1E provided with a liquefied gas storage facility.
