

ABSTRACT

Provided is a negative type photosensitive resin composition containing an epoxy group-containing resin; a metal oxide; and a cationic polymerization initiator (I).

- 5 The cationic polymerization initiator (I) contains one or more selected from the group consisting of a compound represented by Formula (I1) and a compound represented by Formula (I2). In Formula (I1), R^{b01} to R^{b04} represent an aryl group which may have a substituent or a fluorine atom. In Formula (I2), R^{b05} represents a fluorinated alkyl group which may have a substituent or a fluorine atom. A plurality of R^{b05} 's may be the same
- 10 as or different from one another. q represents an integer of 1 or greater, and Q^{q+} 's each independently represent a q -valent organic cation.
