

Abstract**Container management system**

5 The invention relates to a container management system (1) with a number
of containers (2) which have identifying, electronically readable codes
assigned to them, and with a number of dispensing/filling stations
configured for dispensing a liquid from the container (2) or supplying said
container with a fluid. The dispensing/filling stations are associated with
10 electronic reading units by means of which the codes of containers (2) can
be read. Data read by the electronic reading units are fed into a cloud-based
computer system (13) configured for storing and analyzing the data.
