

Abstract

A door operator (1), in particular a swing door operator, with a drive unit (2), which can be coupled to the door via an output shaft (9) and is disposed in a housing (13), with a
5 motor (3), which is in driving connection with the drive unit (2), and with a spring force accumulator (4), which is disposed in the housing (13) and is coupled to the motor (3) and to the drive unit (2), a hydraulic pump (5) being provided, which is in driving connection with the motor (3)
10 and is in hydraulic connection with a hydraulic compartment (6) representing a reservoir volume and with a separate pressure compartment (7), which is associated to the spring force accumulator (4), and in that the drive unit (2) is formed as a cam drive with a cam plate assembly
15 (18), which, in the area of the largest diameter (D) of the reception compartment (21) of the housing (13) for the drive unit (2), is disposed around the output shaft (9).
