(54) **Title**: PLANT CULTIVATION MEDIUM AND METHOD OF PRODUCING DRY SOY PULP

[FIG. 1]

(57) **Abstract**: The present invention provides a plant cultivation medium having advantages such as easy production, low cost, excellent plant growth, little environmental load, high design freedom, easy handling and utility for various purposes. [Solutions] A plant material, which is in a chip, fiber or powder form of a given size made by pulverization/crushing of logged wood such as thinned wood, bark, pruned branches etc., is mixed well with dry soy pulp using a mixer or manually, and then a water-soluble binder (an emulsion adhesive) is added to the mixture and also mixed well using a mixer or by hand to make a paste. Then the obtained paste is poured into a mold (20) of a given shape, and packed to a given extent by hydraulic pressing etc., and then the solidified material is taken out from the mold (20), and dried to obtain the plant cultivation medium (10).
