(54) Title: CONTEXT DISCOVERY SYSTEM AND METHOD

FIG. 1

(57) Abstract: Various embodiments described herein relate to efficient and accurate context discovery of an asset system. In this regard, telemetry data comprising a plurality of data points associated with an asset system is received. The telemetry data is then processed in accordance with one or more context discovery operations. Furthermore, based on the processing of the telemetry data, for each context discovery operation, output data is determined comprising one or more mapping structures indicative of a potential mapping for a respective data point of the plurality of data points. The output data is processed, including identifying one or more definitive mappings. Context data is then generated for the asset system comprising the one or more definitive mappings of respective data points.
