- S201 Acquire multiple pieces of video footage from an original video footage collection
- S202 Acquire target audio materials for use as background music
- S203 With respect to the video footage, respectively perform image feature extraction with respect to video frames of the video footage, and perform segmentation processing on the basis of image feature information corresponding respectively to the video frames of the video footage to acquire target video clips corresponding to the video footage
- S204 Merge the multiple target video clips with the target audio materials to generate a target video, the target video comprising multiple video clips, the multiple video clips being produced respectively on the basis of the multiple target video clips, the video clips in the target video being played back according to the chronological order of publication, and the durations of the multiple video clips matching the durations of corresponding phrases in the target audio materials

(57) **Abstract:** The present disclosure relates to a video generating method and apparatus, an electronic device, and a readable storage medium. The method: by means of selecting multiple pieces of video footage from a video related to a user, and extracting some target video clips from the multiple pieces of video footage selected, the extracted target video clips are merged with determined target audio materials to generate a target video, thus allowing a user to revisit the past by means of the target video; moreover, the durations of the video clips in the target video match the durations of phrases in the target audio materials.
