

5 **Arrangement of disconnect terminals having coupling device,
disconnect terminal having coupling device, and
disconnect terminal having switch status display**

10 **Abstract**

An arrangement (10) comprises at least two disconnect terminals (1, 1') and at least one coupling device (100), wherein the at least two disconnect terminals (1, 1') each
15 comprise at least one switching lever (6, 6'), wherein each switching lever (6, 6') is adjustable independently from the other switching lever (1, 1') from a first switch position (I) into at least one second switch position (II) and back, wherein the switching levers (1, 1') are connectable by means of the at least one coupling device (100). The
20 at least one coupling device (100) connects the switching levers (6, 6') if the at least one coupling device (100) is switched into at least one first coupling position (A), and the at least one coupling device (100) separates the switching levers (6, 6') from one another if the at least one coupling device (100) is switched into at least one second coupling position (B). A disconnect terminal (1, 1') comprises the at least one coupling device (100).
