

[Title of Invention] **ABSORBENT ARTICLE**

ABSTRACT

An absorbent article (1) includes: an absorber (30) disposed at least in the excretion-opening facing region (S1) and the rear region(S3); a skin-facing sheet (10) provided on the skin surface side of the absorber; and a non-skin-facing sheet (20) provided on the non-skin surface side of the absorber. The absorber (30) includes a first low basis weight region (41) extending in the width direction between the excretion-opening facing region and the rear region. The skin-facing sheet (10) includes a non-bonded region (46) which is not bonded to a member provided on the non-skin surface side of the skin-facing sheet over a region from the first low basis weight region to a region behind the first low basis weight region. The absorbent article includes a folding line (F2) extending in the width direction in a region behind the first low basis weight region of the non-bonded region and folding the absorbent article.
