

AIRFLOW ENVIRONMENT SYSTEM

ABSTRACT

5 Airflow environment system (1) includes discharge port (5) and reflector
(3). Discharge port (5) discharges an airflow flowing at least along specific
direction (A1) to environmental space (100). Reflector (3) is disposed to face
discharge port (5) in specific direction (A1), and is hit by the airflow flowing
along specific direction (A1). Reflector (3) is configured to return the airflow
10 that has hit reflector (3) toward discharge port (5) in environmental space (100).
