METHOD FOR OPERATING DESALTING DEVICE

ABSTRACT

A method for operating a desalting apparatus having a first desalting apparatus and a second desalting apparatus comprises: a normal operation step for supplying water to be treated to the first desalting apparatus to separate a first concentrated water and a first desalted water, and supplying the first concentrated water to the second desalting apparatus to separate a second concentrated water and a second desalted water; and a recovery operation step for supplying water to be treated to the first desalting apparatus to separate a first concentrated water and a first permeated water, and passing a dilute water having a lower concentration than the first concentrated water through the second desalting apparatus to recover the desalting performance of the second desalting apparatus.
