ABSTRACT

DATA DISPLAY RADIO PAGER WITH A TIMEPIECE FUNCTION

A data display radio pager having a timepiece function and allowing the user of the pager to perform various kinds of time setting operations on a single operation switch. The pager has a single switch, time counting means, time changing means, time component replacing means, time set mode starting means, and time set mode ending means. The radio pager, therefore, can replace a component of time to be changed, increase or decrease the component of interest, and set up and end a time set mode, by the single switch.
