

ABSTRACT

A laminated film includes: an elongated protective film; a plurality of adhesive layers provided on the protective film; a pressure-sensitive adhesive film provided on the plurality of adhesive layers; and a defective-product identifying marking provided on the pressure-sensitive adhesive film at a position corresponding to a defective adhesive layer being an adhesive layer determined to be a defective product among the plurality of adhesive layers. A method for producing a laminated film includes: a preparation step of preparing a raw film including an elongated protective film, a plurality of adhesive layers provided on the protective film, and a pressure-sensitive adhesive film provided on the plurality of adhesive layers; an inspection step of inspecting the plurality of adhesive layers of the raw film; and a marking step of providing a defective-product identifying marking on the pressure-sensitive adhesive film at a position corresponding to a defective adhesive layer being an adhesive layer determined to be a defective product in the inspection step.
