(54) Title: PATIENT INTERFACE

Figure 18

(57) Abstract: A cushion module for a patient interface for delivering positive pressure respiratory therapy to a user. The cushion module has a seal for forming a seal around the user's mouth and nares and has a housing connected to the seal. The housing and seal form a cavity configured to receive a flow of pressurized gas. The seal has at least one opening to communicate the pressurized gas with the user, an inlet through which the pressurized gas is received into the cavity, an outlet through which gas is exhausted from the cushion module and an exhaust conduit configured to draw gas from the user's nares through at least one exhaust conduit inlet and conduct it to the outlet of the cushion module.
