TITLE OF INVENTION: TOOTHBRUSH STRUCTURE

ABSTRACT

An improved toothbrush structure includes a handle with a toothbrush head disposed at an upper end of the handle. A groove is formed on a side of the toothbrush head and the groove is provided with a cleaning device, and a glue for fixing and adhering the groove of the toothbrush head and the cleaning device with each other, and the cleaning device includes but not limited to a sponge cleaning device, a non-woven fiber cleaning device, a nylon fiber cleaning device, a plant fiber cleaning device, a functional fabric cleaning device or a plastic cleaning device. The cleaning device has an end surface in a shape including but not limited to a flat shape or a wavy shape.
