(54) **Title:** INSTRUMENT DELIVERY DEVICES, SYSTEMS, AND METHODS

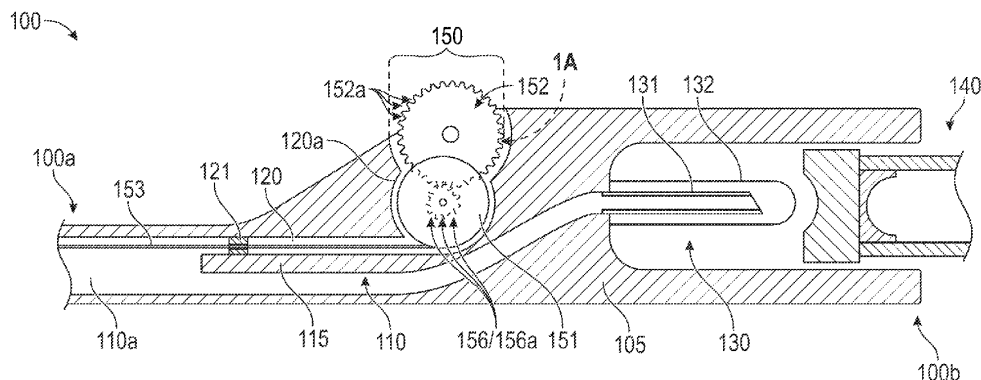

FIG. 1

(57) **Abstract:** An instrument delivery device may include a housing, which may include a distal end and a proximal end. The distal end may be configured to couple to an intravenous catheter device. The proximal end may include a proximal connector. The proximal connector may be adjustable between a first position with respect to the housing to a second position with respect to the housing. An instrument may be disposed within the housing. An advancement wheel may extend out from the housing. In response to the advancement wheel being rotated, the instrument may be advanced through the distal end of the housing. A housing of another instrument delivery device may include an advancement element, which may include a first push tab and/or a second push tab.
