

1    **ABSTRACT OF DISCLOSURE**

2           A container includes a base for supporting a flat object, a cover for  
3    covering the base and at least one locking unit for locking the cover to the  
4    base.   The base includes at least one recess defined therein.   The cover  
5    includes at least one aperture defined therein.   The locking unit includes  
6    a latch and at least one fastener.   The latch is disposed in the cover and  
7    can be inserted in the recess so that the cover is locked to the base.   The  
8    fastener is driven in the latch through the aperture.   Thus, the latch is  
9    pivotally connected to the cover.   Moreover, the fastener can easily be  
10   disconnected from the latch with a tool from the exterior of the cover as  
11   shown in Fig. 2.
