(54) Title: PROBE FOR NON-DESTRUCTIVE TESTING

(57) Abstract: A hand held probe (2) for non destructive testing of items, the probe being moveable over a surface over a test item. The probe includes a displacement sensor means (33, 34) for providing a displacement signal indicative or the spatial and/or rotational displacement of the probe over the test item. The probe contains the transmitters (31, 30) for transmitting a signal and a receiver (31, 30) for receiver for receiving the signal, and it analyses the signal to determine the spatial and/or rotational displacement of the probe. A computer in communication with the probe illustrates the position of the detected flaws relate to the test surface.
