

Description

EFFERVESCENT BEVERAGE HAVING IMPROVED QUALITY OF TASTE
EXHIBITED BY SUGAR AND SWEETENER

Technical Field

[0001]

The present invention relates to a sparkling beverage having improved quality of taste exhibited by a sugar and a sweetener and a method for producing the sparkling beverage.

Background Art

[0002]

Humans have five sensory systems, and the sense of taste is one of the sensory systems of humans. The taste receptor organ to receive tastes is called taste buds, which exist on the fungiform papillae existing over a wide area, mainly on the tip of the tongue, on the vallate papillae existing on a limited area of the back of the tongue, and on the foliate papillae. The taste buds are a cell assembly composed of elongate cells, called taste cells, and basal cells. The taste cells protrude microvilli toward the tongue surface, and form synapses at bottom of the cells with taste nerve fibers entering the taste buds. Tastes we usually sense are transmitted as taste information via the taste nerves to the brain, where the tastes are perceived. Known taste receptors of sweetness include T1R2 and T1R3. T1R2 and T1R3 are

reported to form hetero-dimers (Non-patent Literatures 1 to 3).

[0003]

Although various studies have been made on the sense of taste, little has been revealed yet in this field. We usually experience various tastes of foods. Foods that seem to be tasty have appropriately mixed and well-harmonized tastes. The taste of foods may be tasted as a single taste in some cases, but is often tasted as a mixed taste of various tastes, which are associated with one another.

[0004]

Meanwhile, foods have been required to have lower calories in addition to a good taste in recent years. This relates to a fact that lifestyle-related diseases such as obesity and diabetes are regarded as a problem.

However, to produce lower-calorie foods, their natural sugar concentration has to be maintained low. This is an obstruction in the case of providing foods that exhibit low calories and a good taste.

[0005]

As an example of a contrast effect, which is an interaction of tastes, there has been long known a phenomenon in which addition of salt to sweet red-bean soup enhances sweetness. There is an example that reports the interaction between saltiness and sweetness by focusing on this phenomenon, and it is concluded that the interaction between sweetness and saltiness requires

sweetness that is strong to a certain degree (a 15% solution) and a salt concentration that is high to a certain degree (0.1 to 0.2%) (Non Patent Literature 4).

[0006]

In addition, foods and drinks that exhibit sweetness by using a high-intensity sweetener of low calorie, such as Rebaudioside A, as a substitute for a natural sugar have also been developed, but the sweetness exhibited by a high-intensity sweetener has distinctive aftertaste, which hinders the provision of good taste.

Summary of Invention

Problem to be Solved by the Invention

[0008]

The development of a method for well improving the taste quality exhibited by a sugar and a sweetener while having an adequate sweetness intensity and maintaining the amount of the natural sugar used in a sparkling beverage low has been much awaited.

Means for Solving the Problems

[0009]

The present inventors succeeded for the first time in increasing the sweetness based on the use of a natural sugar and a specific high-intensity sweetener in combination and improving the taste quality by containing not only a natural sugar but also a specific high-intensity sweetener and adding sodium in a low concentration.

[0010]

That is, the present invention is as follows.

[1] A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2; and

(c) 6 to 60 mg/100 ml of sodium,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D,

rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

$0.1 < (X1 + X2) \leq 20$ is satisfied.

[2] The sparkling beverage according to [1], wherein a sodium content is 10 to 50 mg/100 ml.

[3] The sparkling beverage according to [1] or [2], wherein energy is 50 Kcal/100 ml or less.

[4] The sparkling beverage according to any one of [1] to [3], wherein X1 is 0.1 to 5.9.

[5] The sparkling beverage according to any one of [1] to [4], wherein a gas pressure is 2.2 to 4.0 kgf/cm².

[6] The sparkling beverage according to any one of [1] to [5], which is a beverage of orange flavor, lemon flavor, lime flavor, grape flavor, ginger ale flavor, energy drink flavor, cassis flavor, or cola flavor.

[7] The sparkling beverage according to any one of [1] to [6], wherein the natural sugar is at least one selected from the group consisting of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, lactose, psicose, allose, tagatose, and a combination thereof.

[8] The sparkling beverage according to any one of [1] to [7], wherein the high-intensity sweetener is at least one selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof.

[9] The sparkling beverage according to any one of [1] to [8], wherein the sodium is at least one selected from the

group consisting of sodium chloride, sodium hydroxide, sodium malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof.

[10] The sparkling beverage according to any one of [1] to [9], wherein the sparkling beverage comprises 10 to 35 mg/100 ml of sodium, energy is 50 Kcal/100 ml or less, and $X1 + X2$ is 6 or more.

[11] The sparkling beverage according to any one of [1] to [10], which is packed in a container.

[12] A method for producing a sparkling beverage, comprising: to a raw material,

(i) adding (a) a natural sugar in an amount corresponding to a sweetness intensity $X1$ and (b) a high-intensity sweetener in an amount corresponding to a sweetness intensity $X2$; and

(ii) adding (c) sodium such that a sodium content in the beverage is 6 to 60 mg/100 ml,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener $b1$ selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

$0.1 < (X1 + X2) \leq 20$ is satisfied.

[13] The method according to [12], wherein in the sparkling beverage, the sodium content is 10 to 50 mg/100 ml.

[14] The method according to [12] or [13], wherein energy of the sparkling beverage is 50 Kcal/100 ml or less.

[15] The method according to any one of [12] to [14], wherein X1 is 0.1 to 5.9.

[16] The method according to any one of [12] to [15], wherein a gas pressure of the sparkling beverage is 2.2 to 4.0 kgf/cm².

[17] The method according to any one of [12] to [16], wherein the sparkling beverage is a beverage of orange flavor, lemon flavor, lime flavor, grape flavor, ginger ale flavor, energy drink flavor, cassis flavor, or cola flavor.

[18] The method according to any one of [12] to [17], wherein the natural sugar is at least one selected from the group consisting of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, lactose, psicose, allose, tagatose, and a combination thereof.

[19] The method according to any one of [12] to [18], wherein the high-intensity sweetener is at least one selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof.

[20] The method according to any one of [12] to [19], wherein the sodium is at least one selected from the group consisting of sodium chloride, sodium hydroxide, sodium

malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof.

[21] The method according to any one of [12] to [20], wherein in the sparkling beverage, the sodium content is 10 to 35 mg/100 ml, energy is 50 Kcal/100 ml or less, and $X1 + X2$ is 6 or more.

[22] A concentrate for providing the sparkling beverage according to [1], comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity $X4$;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity $X5$; and

(c) 60 to 600 mg/100 ml of sodium,

wherein $(X4 + X5) \leq 200$ is satisfied.

[23] A method for enhancing a sweetness of a sparkling beverage, comprising: containing

(a) a natural sugar in an amount corresponding to a sweetness intensity $X1$;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity $X2$; and

(c) 6 to 60 mg/100 ml of sodium,

in the sparkling beverage.

Advantageous Effects of Invention

[0011]

The method of the present invention provides a method for increasing the sweetness of a sparkling beverage, which is not a simple sweetness that is obtained by increasing the amounts of a natural sugar and a high-intensity sweetener used, and providing good taste quality. In addition, the method of the present invention provides a sparkling beverage having good taste quality with increased sweetness by a means other than control of the used amounts of sugar and sweetener.

Description of Embodiments

[0012]

Hereinafter, the present invention will be described in detail. The following embodiments are examples to describe the present invention and do not intend to limit the present invention only to these embodiments. The present invention can be carried out in various embodiments without departing from the spirit of the present invention.

Note that all of the literatures, laid-open publications, patent publications, and other patent literatures cited herein are deemed to be incorporated by reference into the present specification.

In the present specification, for example, the phrase "the content of the A component is X mg/100 ml" means that "X mg of the A component is contained in 100 ml of the beverage". In addition, for example, the phrase "the content of the B component is Y ppm" means that "the B

component is contained in Y ppm with respect to the total amount (100 mass%) of the beverage".

[0013]

1. Sparkling beverage having improved taste quality exhibited by natural sugar and high-intensity sweetener

The present invention provides, as a first aspect, the following sparkling beverage (hereinafter, referred to as "the sparkling beverage of the present invention").

A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2; and

(c) 6 to 60 mg/100 ml of sodium,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

$0.1 < (X1 + X2) \leq 20$ is satisfied.

In the sparkling beverage of the present invention, sweetness of a sweetness intensity X3 is exhibited by the above-mentioned components (a) to (c).

[0014]

That is, in the sparkling beverage of the present invention, the components having sweetness are (a) a natural sugar in a specific amount and (b) a specific high-intensity sweetener in a specific amount. The calculated

sweetness of the sparkling beverage of the present invention is supposed to be the total value of the sweetness intensity when the component (a) is added to the sparkling beverage and the sweetness intensity when the component (b) is added to the sparkling beverage. However, although the concentration is low, since (c) sodium is present in the sparkling beverage, the sweetness exhibited by (a) a natural sugar and (b) a high-intensity sweetener is enhanced, and the sparkling beverage of the present invention achieves sweetness exceeding the mere sum of the individual sweetness intensities. The present invention means to possibly include additional components such as a fruit juice, an acidulant, a flavoring agent, a plant extract, a milk component, and another flavor, additionally to these components (a) to (c). However, the sparkling beverage of the present invention does not contain a sweet component other than the components (a) and (b) as a sweetener.

[0015]

Further, the sparkling beverage according to a preferable aspect of the present invention achieves an effect of improving the taste quality, in addition to an increase in sweetness. For example, in a sparkling beverage according to an aspect of the present invention, it is preferable to improve at least one of the intensity of flavor and suppression of odd taste (such as bitter taste and astringent taste). Incidentally, the effect of extracting flavor can be confirmed by not only sensory

evaluation but also analysis of the amount of volatilized aroma components by gas chromatography.

[0016]

(Sparkling beverage)

In the present invention, the term "sparkling beverage" refers to a beverage that generates bubbles therefrom and encompasses, for example, a beverage that forms a layer of bubbles on the surface thereof when poured in a container. Examples of the sparkling beverage of the present invention include carbonated beverages. The carbonated beverage are beverages containing carbon dioxide gas, and as such carbon dioxide gas, carbon dioxide gas separately injected into a beverage and carbon dioxide gas generated by fermentation of a part of raw materials are included. The carbonated beverage is not particularly limited, and examples thereof include a refreshing drink, a non-alcoholic beverage, and an alcoholic beverage. Specifically, the examples include, but not limited to, sparkling drink, cola, diet cola, ginger ale, soda pop, a fruit juice flavor carbonated beverage, and fruit juice-flavored carbonated water.

[0017]

The gas pressure of the sparkling beverage of the present invention is not particularly limited and may be 2.2 to 4.0 kgf/cm², 2.2 to 3.5 kgf/cm², 2.2 to 3.3 kgf/cm², 2.2 to 3.2 kgf/cm², 2.3 to 4.0 kgf/cm², 2.3 to 3.5 kgf/cm², 2.3 to 3.2 kgf/cm², 3.0 to 4.0 kgf/cm², or 3.0 to 3.5 kgf/cm². The content of gas in the sparkling beverage can

be regulated by the gas pressure. In the present specification, the term "gas pressure" refers to the gas pressure of carbon dioxide gas in a sparkling beverage in a container unless otherwise stated. The gas pressure can be measured by fixing a beverage with a liquid temperature of 20°C to a gas internal pressure meter, opening the gas internal pressure meter cock once for exposure to the atmosphere to remove the carbon dioxide gas in the head space, then closing the cock again, swinging the gas internal pressure meter, and reading the value when the pointer reaches a certain position. In the present specification, the gas pressure of the sparkling beverage is measured using this method, unless otherwise stated.

[0018]

The sparkling beverage of the present invention may contain alcohol. An alcoholic beverage contains alcohol, and the alcohol used herein means ethyl alcohol (ethanol), unless otherwise noted. The alcoholic beverage according to the present invention may be any type as long as it contains alcohol and may be a beverage having an alcohol content of 0.05 to 40 v/v%, such as beer, sparkling liquor, shochu highball, and a cocktail, or may be a beverage having an alcohol content of less than 0.05 v/v%, such as non-alcoholic beer, a shochu highball taste beverage, and refreshing drink. The alcohol content of the sparkling beverage of the present invention is preferably less than 0.05 v/v% and further preferably 0.00 v/v%. Incidentally, in the present specification, the alcohol content is shown

by volume/volume percentage (v/v%). Additionally, the alcohol content of a beverage can also be measured by any known method and can be measured by, for example, an oscillating densitometer.

[0019]

The flavor of the sparkling beverage of the present invention is not particularly limited, and it is possible to adjust to various flavors. For example, the sparkling beverage of the present invention may be a beverage of orange flavor, lemon flavor, lime flavor, grape flavor, ginger ale flavor, energy drink flavor, cassis flavor, or cola flavor. The flavor of the sparkling beverage of the present invention can be adjusted by adding a component that has been approved as a food additive, such as a fruit juice, an acidulant, a flavoring agent, a plant extract, a milk component, and another flavor or a component that has a long history of being eaten, even if not approved, and is generally recognized as safe. In an aspect of the present invention, the sparkling beverage of the present invention is not a beer taste beverage.

[0020]

The sparkling beverage of the present invention can further contain at least one selected from the group consisting of caramel, cinnamaldehyde, phosphoric acid, vanilla, and caffeine. Here, the caffeine may be a refined product that can be used as a food additive (refined product having a caffeine content of 98.5% or more) or a roughly refined product that can be used as food (caffeine

content of 50% to 98.5%) or can be in a form of an extract of a plant (such as tea leaves, cola nuts, coffee beans, or guarana) containing caffeine or its concentrate. In an aspect of the present invention, the content of caffeine in a sparkling beverage can be 1 to 200 ppm. Quantitative analysis of caffeine can be performed by any method and, for example, can be performed by filtering a sparkling beverage through a membrane filter (manufactured by ADVANTEC, cellulose acetate membrane: 0.45 μ m) and subjecting the sample to high-performance liquid chromatography (HPLC).

[0021]

As another aspect, the sparkling beverage of the present invention can contain cinnamaldehyde. Here, the cinnamaldehyde ($C_6H_5CH=CH-CHO$, molecular weight: 132.16) is one of aromatic aldehydes known as an aroma component of cinnamon and is available as a flavoring preparation. In an aspect of the present invention, the sparkling beverage can contain cinnamaldehyde in an amount within a specific range. For example, the content of cinnamaldehyde in the sparkling beverage of the present invention can be 0.5 to 50 ppm, preferably 0.5 to 32 ppm or 1.0 to 20 ppm. Quantitative analysis of cinnamaldehyde, for example, can be performed by a method, such as gas chromatography or a method using a mass spectrometer.

[0022]

As further another aspect, the sparkling beverage of the present invention can contain caramel (or caramel

coloring). Here, as the caramel, a known caramel coloring that is suitable for food can be used. For example, a product obtained by heat treatment of a carbohydrate for food represented by sugar or glucose or a product obtained by heat treatment of a carbohydrate for food in the presence of an acid or an alkali can be used. Additionally, a sugar component contained in a fruit juice or a vegetable juice can also be used by caramelization. In this case, the sugar component can be caramelized by heat treatment or treatment with an acid or an alkali. The sparkling beverage of the present invention can contain a caramel coloring in a content within a specific range.

[0023]

The form of the sparkling beverage of the present invention is not limited, and the sparkling beverage may be, for example, in a form of a packaged sparkling beverage packed and sealed in a container, such as a can, a bottle, or a PET bottle. When heat sterilization is performed after packaging in a container, the type thereof is not particularly limited. For example, the sterilization can be performed by a usual procedure, such as UHT sterilization and retort sterilization. The temperature of the heat sterilization process is not particularly limited, and the process is performed, for example, at 65°C to 130°C, preferably at 85°C to 120°C, for 10 to 40 minutes. However, if the sterilization value equivalent to that under the conditions above is obtained, there is no problem

in sterilization at an appropriate temperature for several seconds, for example, 5 to 30 seconds.

[0024]

(Natural Sugar)

In the present invention, a "natural sugar", which is represented by the general formula of $C_m(H_2O)_n$, wherein m and n independently represent a natural number, contains a D-form carbohydrate, digestible by humans. Examples of the D-form carbohydrate include glucose, sucrose, fructose, maltose, oligosaccharides (for example, fructooligosaccharide, maltooligosaccharide, isomaltooligosaccharide, and galactooligosaccharide), high-fructose corn syrup (isomerized sugars), lactose, psicose, allose, tagatose, and combinations thereof.

Examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharides, high-fructose corn syrup, and lactose include the following. Specifically, the combination includes sucrose and high-fructose corn syrup, sucrose and glucose, sucrose and fructose, sucrose and maltose, sucrose and an oligosaccharide, sucrose and lactose, high-fructose corn syrup and an oligosaccharide, sucrose and psicose; sucrose, high-fructose corn syrup, and glucose; sucrose, high-fructose corn syrup, and fructose; sucrose, high-fructose corn syrup, and maltose; sucrose, high-fructose corn syrup, and an oligosaccharide; sucrose, high-fructose corn syrup, glucose, and an oligosaccharide; sucrose, glucose, fructose, and an oligosaccharides; and glucose, sucrose, fructose, maltose,

an oligosaccharide, high-fructose corn syrup, lactose, and tagatose.

[0025]

Since a natural sugar has high energy, the energy (calorie) of the sparkling beverage can be greatly reduced by decreasing the content of the natural sugar. The present invention keeps the concentration of the natural sugar low to decrease the energy (i.e., low calorie), but strong sweetness is felt when ingested by a combination of a natural sugar, a high-intensity sweetener, and sodium. Accordingly, the amount of the natural sugar of a sweetness intensity X1 is preferably an amount of providing an energy of 50 Kcal/100 ml or less. The energy of the sparkling beverage of the present invention may be 0 to 50 Kcal/100 ml, 0 to 45 Kcal/100 ml, 0 to 40 Kcal/100 ml, 0 to 35 Kcal/100 ml, 0 to 30 Kcal/100 ml, 0 to 25 Kcal/100 ml, 0 to 22 Kcal/100 ml, 0 to 20 Kcal/100 ml, 0 to 15 Kcal/100 ml, 0 to 10 Kcal/100 ml, 0 to 5 Kcal/100 ml, 5 to 50 Kcal/100 ml, 5 to 45 Kcal/100 ml, 5 to 40 Kcal/100 ml, 5 to 35 Kcal/100 ml, 5 to 30 Kcal/100 ml, 5 to 25 Kcal/100 ml, 5 to 20 Kcal/100 ml, 5 to 15 Kcal/100 ml, 5 to 10 Kcal/100 ml, 10 to 50 Kcal/100 ml, 10 to 45 Kcal/100 ml, 10 to 40 Kcal/100 ml, 10 to 35 Kcal/100 ml, 10 to 30 Kcal/100 ml, 10 to 25 Kcal/100 ml, 10 to 20 Kcal/100 ml, 10 to 15 Kcal/100 ml, 15 to 50 Kcal/100 ml, 15 to 45 Kcal/100 ml, 15 to 40 Kcal/100 ml, 15 to 35 Kcal/100 ml, 15 to 30 Kcal/100 ml, 15 to 25 Kcal/100 ml, 15 to 20 Kcal/100 ml, 20 to 50 Kcal/100 ml, 20 to 45 Kcal/100 ml,

20 to 40 Kcal/100 ml, 20 to 35 Kcal/100 ml, 20 to 30 Kcal/100 ml, 20 to 25 Kcal/100 ml, 25 to 50 Kcal/100 ml, 25 to 45 Kcal/100 ml, 25 to 40 Kcal/100 ml, 25 to 35 Kcal/100 ml, or 25 to 30 Kcal/100 ml, depending on embodiments. The energy of the sparkling beverage of the present invention may also be 0 to 32 Kcal/100ml, 0 to 24 Kcal/100ml, 0 to 8 Kcal/100ml, 0 to 4 Kcal/100ml, 4 to 32 Kcal/100ml, 4 to 24 Kcal/100ml, 4 to 8 Kcal/100ml, 8 to 32 Kcal/100ml, 8 to 24 Kcal/100ml, or 24 to 32 Kcal/100ml, depending on embodiments. When a high calorie component such as a milk component, a total calorie of a natural sugar and a component such as a milk component is preferably 50 Kcal/100ml or less.

[0026]

Additionally, X1 of "the sweetness intensity X1" may be 0 to 0.5, 0 to 1.0, 0 to 1.5, 0 to 2.0, 0 to 2.5, 0 to 3.0, 0 to 3.5, 0 to 4.0, 0 to 4.5, 0 to 5.0, 0 to 5.5, 0 to 6.0, 0 to 6.5, 0 to 7.0, 0 to 7.5, 0 to 8.0, 0 to 8.25, 0 to 8.5, 0 to 8.75, 0 to 9.0, 0 to 9.25, 0 to 9.5, 0 to 9.75, 0 to 10.0, 0.05 to 0.5, 0.05 to 1.0, 0.05 to 1.5, 0.05 to 2.0, 0.05 to 2.5, 0.05 to 3.0, 0.05 to 3.5, 0.05 to 4.0, 0.05 to 4.5, 0.05 to 5.0, 0.05 to 5.5, 0.05 to 6.0, 0.05 to 6.5, 0.05 to 7.0, 0.05 to 7.5, 0.05 to 8.0, 0.05 to 8.25, 0.05 to 8.5, 0.05 to 8.75, 0.05 to 9.0, 0.05 to 9.25, 0.05 to 9.5, 0.05 to 9.75, 0.05 to 10.0, 0.1 to 0.5, 0.1 to 1.0, 0.1 to 1.5, 0.1 to 2.0, 0.1 to 2.5, 0.1 to 3.0, 0.1 to 3.5, 0.1 to 4.0, 0.1 to 4.5, 0.1 to 5.0, 0.1 to 5.5, 0.1 to 5.9, 0.1 to 6.0, 0.1 to 6.5, 0.1 to 7.0, 0.1 to 7.5,

The amount corresponding to the sweetness intensity X1 of the natural sugar refers to an amount (a concentration) that exhibits the sweetness of the sweetness intensity X1 under conditions where the natural sugar is dissolved in water at 20°C having a volume equivalent to that of the sparkling beverage of the present invention.

[0028]

Here, the sweetness intensity means sweetness exhibited by a substance. For example, in the case where the sweetness intensity exhibited by sucrose per unit concentration Brix 1 is defined as a degree of sweetness of 1, glucose has a degree of sweetness of 0.6 to 0.7 (center value: 0.65). A numerical value obtained by multiplying this degree of sweetness by the concentration Brix value of glucose is the sweetness intensity of glucose. Thus, when the concentration of glucose is Brix 1.5, the sweetness intensity of glucose is $0.65 \times 1.5 = 0.975$. When calculating the sweetness intensity in the present invention, the sweetness intensity of a sugar showing a range in the degree of sweetness, the center value is used unless otherwise noted.

Table 1

Sugar (D-form)	Degree of sweetness
Sucrose	1
Glucose	0.6 to 0.7
Fructose	1.3 to 1.7
Maltose	0.4
Fructooligosaccharide	0.6
Maltooligosaccharide	0.3
Isomaltooligosaccharide	0.4 to 0.5
Galactooligosaccharide	0.7
Isomerized sugar	0.8 to 0.9
Lactose	0.2 to 0.3
Psicose	0.7
Allose	0.8
Tagatose	0.9

[0029]

(High-Intensity Sweetener)

In the present invention, the "high-intensity sweetener" refers to a compound having sweetness more intense than that of sucrose, and may be a naturally occurring compound, a synthetic compound, and a combination of a naturally occurring compound and a synthetic compound. The high-intensity sweetener, in an amount equivalent to sucrose, exhibits sweetness 5 times or more, 10 times or more, 50 times or more, 100 times or more, 500 times or more, 1000 times or more, 5000 times or more, 10000 times or more, 50000 times or more, or 100000 times or more as that of sucrose. The high-intensity sweetener exhibits extremely intense sweetness in this way. When the existence of the natural sugar and high-intensity sweetener in the food or beverage of the present invention is expressed in a weight ratio, "natural sugar:high-intensity sweetener" is 5:1 to 10:1, 50:1 to 100:1, 50:1 to 200:1, 500:1 to 1000:1, 5000:1 to 10000:1, and 50000:1 to 100000:1.

[0030]

In the present invention, as the high-intensity sweetener, at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin is used.

The content of the high-intensity sweetener b1 based on the total amount (100 mass%) of the high-intensity sweetener as the component (b) is preferably 50 mass% or

more, more preferably 60 mass% or more, further preferably 70 mass% or more, more further preferably 80 mass% or more, and particularly preferably 90 mass% or more. In an aspect of the present invention, the high-intensity sweetener as the component (b) may substantially consist of the high-intensity sweetener b1. In the present specification, the phrase "substantially consist of the high-intensity sweetener b1" means that impurities, such as other steviol glycoside and mogroside, which are inevitably included in the process (e.g., purification of a stevia extract or a Luo han guo extract or biosynthesis) of preparing the high-intensity sweetener b1 may be included.

[0031]

Rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, and rebaudioside E may be directly extracted from stevia or may be obtained by attaching glucose to a compound having another structure contained in a stevia extract.

[0032]

The Luo han guo extract as a sweetener is an extract of Luo han guo containing a sweet substance derived from Luo han guo, and has been approved as a food additive in various countries including Japan and is commercially available. Examples of the sweet substance derived from Luo han guo include mogroside V, mogroside IV, 11-oxo-mogroside V, and Siamenoside I.

[0033]

Mogroside V is one of the major mogrol glycosides contained in Luo han guo, and it has been reported that it has a good-quality sweetness property close to sucrose when compared with rebaudioside A. In addition, the degree of sweetness of mogroside V is about 300 times that of sucrose (Murata Y. et al., Nippon Shokuhin Kagaku Kogaku Kaishi, Vol. 53, No. 10, 527 to 533, (2006)). Mogroside V can be obtained from a Luo han guo extract (e.g., an alcohol extract of Luo han guo) through purification by chromatography or the like. Alternatively, mogroside V may be obtained by attaching glucose to a compound having another structure contained in a Luo han guo extract.

[0034]

The Luo han guo extract preferably contains mogroside V and the ratio thereof is not limited and can be 10 wt% or more, 15 wt% or more, 20 wt% or more, 25 wt% or more, 30 wt% or more, 35 wt% or more, 40 wt% or more, 45 wt% or more, 50 wt% or more, 55 wt% or more, 60 wt% or more, 65 wt% or more, 70 wt% or more, and 75 wt% or more, of the total dry weight of a Luo han guo extract. The content of mogroside V can be determined by a known technique such as liquid chromatography. The Luo han guo extract can be obtained by extracting a fruit of Luo han guo (*Siraitia grosvenorii*) with a suitable solvent (for example, an aqueous solvent such as water, an alcohol solvent such as ethanol or methanol, a mixed solvent of an aqueous solvent and an alcohol solvent such as water-containing ethanol or water-containing methanol), and then optionally carrying

out a treatment such as degreasing, purification, concentration, and drying.

[0035]

Mogroside V may be one having a high purity, for example, a purity of 80% or more, 85% or more, 90% or more, 91% or more, 92% or more, 93% or more, 94% or more, 95% or more, 96% or more, 97% or more, or 98% or more. In mogroside V obtained by purifying a Luo han guo extract, understandably, the amount of Luo han guo extract components other than mogroside V is decreased with an increase in purity.

[0036]

Thaumatococcus is a protein-based sweetener extracted from a plant.

[0037]

In the present invention, an optional high-intensity sweetener b2 may be used in combination with the above-described high-intensity sweetener b1, as needed. Specific examples of the optional high-intensity sweetener b2 include peptide-based sweeteners, such as aspartame, neotame, and alitame; sucrose derivatives, such as sucralose; synthetic sweeteners, such as acesulfame K, saccharine, advantame, cyclamate, and dulcin; protein-based sweeteners extracted from plants, such as monellin, curculin, and brazzein, other than thaumatococcus; high-intensity sweeteners other than protein-based sweetener extracted from plants; tourmaline; and neohesperidin dihydrochalcone.

[0038]

The sucrose derivative is that obtained by substituting the OH group or the H group of sucrose with another substituent, and examples thereof include halogen derivatives of sucrose (sucralose), oxathiazinonedioxide derivatives, sugar alcohols, aldonic acid, and uronic acid.

[0039]

Examples of the high-intensity sweetener other than the protein-based sweeteners extracted from plants include sweeteners present in a stevia extract, other than rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, and rebaudioside E; sweeteners present in a Luo han guo extract, other than mogroside V; sweeteners present in a Glycyrrhiza extract; and glycosides thereof, and also include monatin and glycyrrhizin.

[0040]

Examples of the sweetener present in a stevia extract, other than rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, and rebaudioside E and the glycoside thereof include steviol, stevioside, rebaudioside A, rebaudioside B, and rebaudioside C.

[0041]

Examples of the sweetener present in a Luo han guo extract, other than mogroside V and the glycoside thereof include mogroside IV.

[0042]

The Glycyrrhiza extract refers to that obtained from roots or rhizomes of *Glycyrrhiza uralensis* Fisher,

Glycyrrhiza inflata Batalin, or Glycyrrhiza glabra Linne and having glycyrrhizic acid as a main component. Examples of the Glycyrrhiza extract include a Glycyrrhiza extract, glycyrrhizin, and a licorice extract.

[0043]

In the present invention, the high-intensity sweetener b1 is suitable at least one selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof. In particular, rebaudioside D, rebaudioside M, or a mixture of rebaudioside D and rebaudioside M is suitable as the high-intensity sweetener b1.

[0044]

Rebaudioside D and rebaudioside M have less negative flavor, such as astringent taste and metallic taste, which is observed in rebaudioside A and have characteristics, such as good-quality sweetness, and they are expected to be used in the fields of food and drink (NIPPON KAGAKU KAISHI, (5), (1981), 726-735, "Sweet Diterpene-Glycoside of Leaves of Stevia rebaudiana Bertoni Synthesis and Structure-Sweetness Relationship of Rebaudiosides-A, -D, -E and Their Related glycosides", Kasai, Kaneda, Tanaka, Yamasaki, Sakamoto, Morimoto, Okada, Kitahata, and Furukawa). Thus, rebaudioside D and rebaudioside M when used alone are excellent in that they have less odd taste compared to rebaudioside A and sweetness close to sucrose. Rebaudioside D and rebaudioside M each have sweetness about 200 times that of sucrose.

[0045]

Examples of the combination of the high-intensity sweeteners b1 and the combination of the high-intensity sweetener b1 and the optional high-intensity sweetener b2 include the followings. Specifically, the examples include combinations of rebaudioside D and rebaudioside M; rebaudioside D and rebaudioside A; rebaudioside M and rebaudioside A; rebaudioside M and mogroside V; rebaudioside D and mogroside V; rebaudioside D and advantame; rebaudioside D and acesulfame K; rebaudioside D and sucralose; rebaudioside M, rebaudioside D, and rebaudioside A; rebaudioside M, rebaudioside D, and mogroside V; rebaudioside M, rebaudioside D, and advantame; rebaudioside M, rebaudioside D, and acesulfame K; rebaudioside M, rebaudioside D, and sucralose; rebaudioside A, rebaudioside M, rebaudioside D, and mogroside V; rebaudioside A, rebaudioside M, mogroside V, and sucralose; rebaudioside D, rebaudioside M, mogroside V, and acesulfame K; rebaudioside M, rebaudioside A, mogroside V, and neohesperidin dihydrochalcone; and rebaudioside M, rebaudioside D, sucralose, neohesperidin dihydrochalcone, and brazzein.

[0046]

In addition, the examples include combinations of rebaudioside D and mogroside V; rebaudioside D and a Luo han guo extract; rebaudioside M and a Luo han guo extract; rebaudioside M, rebaudioside D, and a Luo han guo extract; rebaudioside A, rebaudioside M, rebaudioside D, and a Luo

han guo extract; rebaudioside A, rebaudioside M, a Luo han guo extract, and sucralose; rebaudioside D, rebaudioside M, a Luo han guo extract, and acesulfame K; and rebaudioside M, rebaudioside A, a Luo han guo extract, and neohesperidin dihydrochalcone.

[0048]

X2 may also be 0.05 to 6.0, 0.05 to 6.5, 0.05 to 7.0, 0.05 to 7.5, 0.05 to 8.0, 0.05 to 8.5, 0.05 to 9.0, 0.05 to 9.5, 0.05 to 10.0, 0.05 to 10.5, 0.05 to 11.0, 0.05 to 11.5, 0.05 to 12.0, 0.05 to 13.0, 0.05 to 14.0, 0.05 to 15.0, 0.05 to 16.0, 0.05 to 17.0, 0.05 to 18.0, 0.5 to 6.0, 0.5 to 6.5, 0.5 to 7.0, 0.5 to 7.5, 0.5 to 8.0, 0.5 to 8.5, 0.5 to 9.0, 0.5 to 9.5, 0.5 to 10.0, 0.5 to 10.5, 0.5 to 11.0, 0.5 to 11.5, 0.5 to 12.0, 0.5 to 13.0, 0.5 to 14.0, 0.5 to 15.0, 0.5 to 16.0, 0.5 to 17.0, 0.5 to 18.0, 1.0 to 6.0, 1.0 to 6.5, 1.0 to 7.0, 1.0 to 7.5, 1.0 to 8.0, 1.0 to 8.5, 1.0 to 9.0, 1.0 to 9.5, 1.0 to 10.0, 1.0 to 10.5, 1.0 to 11.0, 1.0 to 11.5, 1.0 to 12.0, 1.0 to 13.0, 1.0 to 14.0, 1.0 to 15.0, 1.0 to 16.0, 1.0 to 17.0, 1.0 to 18.0, 1.5 to 6.0, 1.5 to 6.5, 1.5 to 7.0, 1.5 to 7.5, 1.5 to 8.0, 1.5 to 8.5, 1.5 to 9.0, 1.5 to 9.5, 1.5 to 10.0, 1.5 to 10.5, 1.5 to 11.0, 1.5 to 11.5, 1.5 to 12.0, 1.5 to 13.0, 1.5 to 14.0, 1.5 to 15.0, 1.5 to 16.0, 1.5 to 17.0, 1.5 to 18.0, 2.0 to 8.0, 2.0 to 8.5, 2.0 to 9.0, 2.0 to 9.5, 2.0 to 10.0, 2.0 to 10.5, 2.0 to 11.0, 2.0 to 11.5, 2.0 to 12.0, 2.0 to 13.0, 2.0 to 14.0, 2.0 to 15.0, 2.0 to 16.0, 2.0 to 17.0, 2.0 to 18.0, 2.5 to 8.0, 2.5 to 8.5, 2.5 to 9.0, 2.5 to 9.5, 2.5 to 10.0, 2.5 to 10.5, 2.5 to 11.0, 2.5 to 11.5, 2.5 to 12.0, 2.5 to 13.0, 2.5 to 14.0, 2.5 to 15.0, 2.5 to 16.0, 2.5 to 17.0, 2.5 to 18.0, 3.0 to 10.0, 3.0 to 10.5, 3.0 to 11.0, 3.0 to 11.5, 3.0 to 12.0, 3.0 to 13.0, 3.0 to 14.0, 3.0 to 15.0, 3.0 to 16.0, 3.0 to 17.0, 3.0 to 18.0, 3.5 to 4.0, 3.5 to 4.5, 3.5 to 5.0, 3.5 to 5.5, 3.5 to 6.0, 3.5 to 6.5, 3.5 to 12.0, 3.5 to 13.0, 3.5

to 14.0, 3.5 to 15.0, 3.5 to 16.0, 3.5 to 17.0, 3.5 to 18.0, 4.0 to 4.5, 4.0 to 5.0, 4.0 to 5.5, 4.0 to 6.0, 4.0 to 6.5, 4.0 to 7.0, 4.0 to 10.0, 4.0 to 10.5, 4.0 to 11.0, 4.0 to 12.0, 4.0 to 13.0, 4.0 to 14.0, 4.0 to 15.0, 4.0 to 16.0, 4.0 to 17.0, or 4.0 to 18.0.

The amount corresponding to a sweetness intensity X2 of a high-intensity sweetener refers to an amount which provides sweetness of a sweetness intensity X2 under the conditions when the high-intensity sweetener is dissolved in water having the same volume as the sparkling beverage of the present invention at 20°C.

[0049]

As in a natural sugar, also here, the sweetness intensity means the sweetness exhibited by a substance. For example, when the sweetness intensity exhibited by sucrose per unit concentration Brix 1 is defined as a degree of sweetness of 1, the degree of sweetness of rebaudioside D is 200 to 250 (center value 225), the degree of sweetness of rebaudioside M is 200 to 260 (center value 230), the degree of sweetness of rebaudioside N is 200 to 250 (center value 225), the degree of sweetness of rebaudioside O is 200 to 250 (center value 225), the degree of sweetness of rebaudioside E is 70 to 80 (center value 75), the degree of sweetness of a Luo han guo extract is 110 to 150 (center value 130), the degree of sweetness of mogroside V is 240 to 300 (center value 270), and the degree of sweetness of thaumatin is 2,000. The numerical value obtained by multiplying these degrees of sweetness

by the concentration (w/v% (considered to be the same as w/w% in the case of a beverage)) of the high-intensity sweetener in the sparkling beverage is the sweetness intensity of the high-intensity sweetener. When calculating the sweetness intensity in the present invention, the sweetness intensity of a high-intensity sweetener showing a range in the degree of sweetness, the center value is used unless otherwise noted.

[0050]

Further, the amount of a high-intensity sweetener can be P2 ppm and P2 ppm herein refers to an amount corresponding to a sweetness intensity X2. The P2 herein can be a value of 20 to 550, 25 to 550, 30 to 550, 35 to 550, 40 to 550, 45 to 550, 50 to 550, 55 to 550, 20 to 540, 25 to 540, 30 to 540, 35 to 540, 40 to 540, 45 to 540, 50 to 540, 55 to 540, 20 to 530, 25 to 530, 30 to 530, 35 to 530, 40 to 530, 45 to 530, 50 to 530, 55 to 530, 20 to 520, 25 to 520, 30 to 520, 35 to 520, 40 to 520, 45 to 520, 50 to 520, 55 to 520, 20 to 510, 25 to 510, 30 to 510, 35 to 510, 40 to 510, 45 to 510, 50 to 510, 55 to 510, 20 to 505, 25 to 505, 30 to 505, 35 to 505, 40 to 505, 45 to 505, 50 to 505, 55 to 505, 20 to 500, 25 to 500, 30 to 500, 35 to 500, 40 to 500, 45 to 500, 50 to 500, 55 to 500, 20 to 495, 25 to 495, 30 to 495, 35 to 495, 40 to 495, 45 to 495, 50 to 495, 55 to 495, 20 to 490, 25 to 490, 30 to 490, 35 to 490, 40 to 490, 45 to 490, 50 to 490, or 55 to 490.

[0051]

The P2 can also be a value of 1 to 1500, 1 to 1200, 5 to 1200, 1 to 1000, 5 to 1000, 10 to 1000, 1 to 900, 5 to 900, 10 to 900, 15 to 900, 20 to 900, 25 to 900, 30 to 900, 35 to 900, 40 to 900, 45 to 900, 50 to 900, 55 to 900, 1 to 800, 5 to 800, 10 to 800, 15 to 800, 20 to 800, 25 to 800, 30 to 800, 35 to 800, 40 to 800, 45 to 800, 50 to 800, 55 to 800, 1 to 700, 5 to 700, 10 to 700, 15 to 700, 20 to 700, 25 to 700, 30 to 700, 35 to 700, 40 to 700, 45 to 700, 50 to 700, 55 to 700, 1 to 600, 5 to 600, 10 to 600, 15 to 600, 20 to 600, 25 to 600, 30 to 600, 35 to 600, 40 to 600, 45 to 600, 50 to 600, 55 to 600, 1 to 550, 1 to 540, 1 to 530, 1 to 520, 1 to 510, 1 to 505, 1 to 500, 1 to 495, 1 to 490, 5 to 550, 5 to 540, 5 to 530, 5 to 520, 5 to 510, 5 to 505, 5 to 500, 5 to 495, 5 to 490, 10 to 550, 10 to 540, 10 to 530, 10 to 520, 10 to 510, 10 to 505, 10 to 500, 10 to 495, 10 to 490, 15 to 550, 15 to 540, 15 to 530, 15 to 520, 15 to 510, 15 to 505, 15 to 500, 15 to 495, or 15 to 490.

[0052]

(Sodium)

The present invention contains (c) 6 to 60 mg/100 ml of sodium, which means that the amount of sodium atoms is 6 to 60 mg/100 ml of sodium. The amount of sodium may be the amount of 6 to 60mg/100ml, 6 to 55mg/100ml, 6 to 50mg/100ml, 6 to 45mg/100ml, 6 to 40mg/100ml, 6 to 35mg/100ml, 6 to 30mg/100ml, 6 to 25mg/100ml, 6 to 20mg/100ml, 6 to 19mg/100ml, 6 to 18mg/100ml, 6 to 17mg/100ml, 6 to 16mg/100ml, 6 to 15mg/100ml, 6 to

14mg/100ml, 6 to 13mg/100ml, 6 to 12mg/100ml, 6 to 11mg/100ml, 6 to 10mg/100ml, 10 to 60mg/100ml, 10 to 55mg/100ml, 10 to 50mg/100ml, 10 to 45mg/100ml, 10 to 40mg/100ml, 10 to 35mg/100ml, 10 to 30mg/100ml, 10 to 25mg/100ml, 10 to 20mg/100ml, 10 to 19mg/100ml, 10 to 18mg/100ml, 10 to 17mg/100ml, 10 to 16mg/100ml, 10 to 15mg/100ml, 15 to 60mg/100ml, 15 to 55mg/100ml, 15 to 50mg/100ml, 15 to 45mg/100ml, 15 to 40mg/100ml, 15 to 35mg/100ml, 15 to 30mg/100ml, 15 to 25mg/100ml, 15 to 20mg/100ml, 20 to 60mg/100ml, 20 to 55mg/100ml, 20 to 50mg/100ml, 20 to 45mg/100ml, 20 to 40mg/100ml, 20 to 35mg/100ml, 20 to 30mg/100ml, 20 to 25mg/100ml, 25 to 60mg/100ml, 25 to 55mg/100ml, 25 to 50mg/100ml, 25 to 45mg/100ml, 25 to 40mg/100ml, 25 to 35mg/100ml, 30 to 60mg/100ml, 30 to 55mg/100ml, 30 to 50mg/100ml, 30 to 45mg/100ml, 30 to 40mg/100ml, 30 to 35mg/100ml, 335 to 60mg/100ml, 35 to 55mg/100ml, 35 to 50mg/100ml, 35 to 45mg/100ml, 35 to 40mg/100ml, 40 to 60mg/100ml, 40 to 55mg/100ml, 40 to 50mg/100ml, or 40 to 45mg/100ml, depending on embodiments.

[0053]

The amount of sodium may be the amount of 6 to 34mg/100ml, 6 to 33mg/100ml, 6 to 32mg/100ml, 6 to 31mg/100ml, 6 to 29mg/100ml, 6 to 22mg/100ml, 6 to 21mg/100ml, 10 to 34mg/100ml, 10 to 33mg/100ml, 10 to 32mg/100ml, 10 to 31mg/100ml, 10 to 29mg/100ml, 10 to 22mg/100ml, 10 to 21mg/100ml, 11.5 to 34mg/100ml, 11.5 to 33mg/100ml, 11.5 to 32mg/100ml, 11.5 to 31mg/100ml, 11.5

to 30mg/100ml, 11.5 to 29mg/100ml, 11.5 to 22mg/100ml, 11.5 to 21mg/100ml, 11.5 to 20mg/100ml, 11.5 to 19mg/100ml, 11.5 to 18mg/100ml, 11.5 to 17mg/100ml, 11.5 to 16mg/100ml, 11.5 to 15mg/100ml, 11.5 to 14mg/100ml, 11.5 to 13mg/100ml, 11.5 to 12mg/100ml, 5.75 to 34.5mg/100ml, 5.75 to 28.75mg/100ml, 5.75 to 23mg/100ml, 5.75 to 17.25mg/100ml, 5.75 to 11.5mg/100ml, 11.5 to 34.5mg/100ml, 11.5 to 28.75mg/100ml, 11.5 to 23mg/100ml, 11.5 to 17.25mg/100ml, 17.25 to 34.5mg/100ml, 17.25 to 28.75mg/100ml, 17.25 to 23mg/100ml, 23 to 34.5mg/100ml, 23 to 28.75mg/100ml, or 28.75 to 34.5mg/100ml, depending on embodiments.

[0054]

In addition, the amount of sodium that is added to a sparkling beverage may be 0.1 to 50mg/100ml, 0.1 to 45mg/100ml, 0.1 to 40mg/100ml, 0.1 to 35mg/100ml, 0.1 to 30mg/100ml, 0.1 to 25mg/100ml, 0.1 to 20mg/100ml, 0.1 to 19mg/100ml, 0.1 to 18mg/100ml, 0.1 to 17mg/100ml, 0.1 to 16mg/100ml, 0.1 to 15mg/100ml, 0.1 to 14mg/100ml, 0.1 to 13mg/100ml, 0.1 to 12mg/100ml, 0.1 to 11mg/100ml, 0.1 to 10mg/100ml, 1 to 50mg/100ml, 1 to 45mg/100ml, 1 to 40mg/100ml, 1 to 35mg/100ml, 1 to 30mg/100ml, 1 to 25mg/100ml, 1 to 20mg/100ml, 1 to 19mg/100ml, 1 to 18mg/100ml, 1 to 17mg/100ml, 1 to 16mg/100ml, 1 to 15mg/100ml, 1 to 14mg/100ml, 1 to 13mg/100ml, 1 to 12mg/100ml, 1 to 11mg/100ml, 1 to 10mg/100ml, 5 to 50mg/100ml, 5 to 45mg/100ml, 5 to 40mg/100ml, 5 to 35mg/100ml, 5 to 30mg/100ml, 5 to 25mg/100ml, 5 to 20mg/100ml, 5 to 19mg/100ml, 5 to 18mg/100ml, 5 to

17mg/100ml, 5 to 16mg/100ml, 5 to 15mg/100ml, 5 to 14mg/100ml, 5 to 13mg/100ml, 5 to 12mg/100ml, 5 to 11mg/100ml, 5 to 10mg/100ml, 10 to 50mg/100ml, 10 to 45mg/100ml, 10 to 40mg/100ml, 10 to 35mg/100ml, 10 to 30mg/100ml, 10 to 25mg/100ml, 10 to 20mg/100ml, 10 to 19mg/100ml, 10 to 18mg/100ml, 10 to 17mg/100ml, 10 to 16mg/100ml, 10 to 15mg/100ml, 15 to 50mg/100ml, 15 to 45mg/100ml, 15 to 40mg/100ml, 15 to 35mg/100ml, 15 to 30mg/100ml, 15 to 25mg/100ml, 15 to 20mg/100ml, 20 to 50mg/100ml, 20 to 45mg/100ml, 20 to 40mg/100ml, 20 to 35mg/100ml, 20 to 30mg/100ml, 20 to 25mg/100ml, 25 to 50mg/100ml, 25 to 45mg/100ml, 25 to 40mg/100ml, 25 to 35mg/100ml, or 25 to 30mg/100ml.

[0055]

Forms of sodium is not particularly limited provided that sodium in an ingestible state is contained in the sparkling beverage of the present invention, and may be in at least one form selected from the group consisting of sodium chloride, sodium hydroxide, sodium malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof, for example. In addition, since sodium can be contained in water and flavor of a sparkling beverage, such sodium contained in the raw material is also encompassed in the sodium contained in

the sparkling beverage of the present invention. Additionally, when a sparkling beverage contains a milk component, such as milk, cow's milk, or a dairy product, sodium contained in the milk component is also encompassed. In an aspect of the present invention, sodium derived from a sodium component that is used as a preservative (e.g., sodium benzoate, sodium sulfite, sodium hyposulfite, sodium dehydroacetate, sodium pyrosulfite, or sodium propionate) is not substantially included in the component (c).

[0056]

In the present specification, the sodium content in a beverage can be measured by atomic absorption spectrometry. Incidentally, when the amount of a sodium-containing compound contained in the beverage is known, the value calculated from the amount may be used.

[0057]

The sparkling beverage of the present invention has an enhanced sweetness as having been already mentioned. Whether or not the sweetness of the sparkling beverage of the present invention is enhanced can be evaluated by panelists who received sensory trainings. Further, for the sweetness intensity of the sparkling beverage of the present invention, standard sparkling beverages to be the sweetness standards are prepared with sucrose concentrations assigned as sweetness intensities 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, and 15 and panelists compare the sweetness of the sparkling beverage of the

present invention with the sweetnesses of these standard sparkling beverages thereby to measure the sweetness of the sparkling beverage of the present invention. Note that the standard sparkling beverages having a sweetness intensity of 1, 2, ... 15 are prepared by adding sucrose in such a way that a sucrose content is 1 g/100 g, 2 g/100 g, ... 15 g/100 g to the sparkling beverage to which sucrose is not added.

Furthermore, of the standard sparkling beverages having a lower sweetness than the sparkling beverage of the present invention in the above measurement, the standard sparkling beverage having the closest sweetness to that of the sparkling beverage of the present invention is selected and adjusted in such a way as to have the same sweetness as that of the sparkling beverage of the present invention by adding sucrose to the selected standard sparkling beverage, during which a sweetness intensity X3 of the sparkling beverage of the present invention can also be measured from a sucrose content in the adjusted standard sparkling beverage.

[0058]

Other examples of the method for measuring a sweetness of the sparkling beverage of the present invention include a sweetness intensity rating using Visual Analogue Scale (VAS method). For the VAS method, literatures in The journal of Japanese Society of Stomatognathic Function (2014) 20 pp. 115-129 ("Construction of a Screening Test for Gustatory Function in Four Basic Tastes" by Toyota et

al.) and the like can be referred. Specifically, in the measurement of sweetness intensity by the VAS method, for example, evaluators define sweetness intensities as "not sweet at all" at the lower end and "nothing is sweeter than this" at the upper end and, using a piece of paper on which a vertical line indicating the intensities of sweetness on the straight line, assess a sweetness intensity sensed at that time by showing a position on the straight line.

[0059]

X3 may be 4.0 to 20, 4.0 to 15, 4.0 to 12.5, 4.0 to 10, 4.5 to 20, 4.5 to 15, 4.5 to 12.5, 4.5 to 10, 5.0 to 20, 5.0 to 15, 5.0 to 12.5, 5.0 to 10, 5.5 to 20, 5.5 to 15, 5.5 to 12.5, 5.5 to 10, 6.0 to 20, 6.0 to 15, 6.0 to 12.5, 6.0 to 10, 6.5 to 20, 6.5 to 15, 6.5 to 12.5, 6.5 to 10, 7.0 to 20, 7.0 to 15, 7.0 to 12.5, 7.0 to 10, 7.5 to 20, 7.5 to 15, 7.5 to 12.5, 7.5 to 10, 7.5 to 9, 7.5 to 8, 8.0 to 20, 8.0 to 15, 8.0 to 12.5, 8.0 to 10, 8.5 to 20, 8.5 to 15, 8.5 to 12.5, 8.5 to 10, 9.0 to 20, 9.0 to 15, 9.0 to 12.5, 9.0 to 10, 9.5 to 20, 9.5 to 15, 9.5 to 12.5, 9.5 to 10, 10.0 to 20, 10.0 to 15, 10.0 to 12.5, 10.5 to 20, 10.5 to 15, or 10.5 to 12.5. Alternatively, X3 may be 4.0 to 18, 4.0 to 16, 4.0 to 15.5, 4.0 to 14, 4.5 to 18, 4.5 to 16, 4.5 to 15.5, 4.5 to 14, 5.0 to 18, 5.0 to 16, 5.0 to 15.5, 5.0 to 14, 5.5 to 18, 5.5 to 16, 5.5 to 15.5, 5.5 to 14, 6.0 to 18, 6.0 to 16, 6.0 to 15.5, 6.0 to 14, 6.5 to 18, 6.5 to 16, 6.5 to 15.5, 6.5 to 14, 7.0 to 18, 7.0 to 16, 7.0 to 15.5, 7.0 to 14,

7.5 to 18, 7.5 to 16, 7.5 to 15.5, 7.5 to 14, 7.5 to 9, 7.5 to 8, 8.0 to 18, 8.0 to 16, 8.0 to 15.5, 8.0 to 14, 8.5 to 18, 8.5 to 16, 8.5 to 15.5, 8.5 to 14, 9.0 to 18, 9.0 to 16, 9.0 to 15.5, 9.0 to 14, 9.5 to 18, 9.5 to 16, 9.5 to 15.5, 9.5 to 14, 10.0 to 18, 10.0 to 16, 10.0 to 15.5, 10.5 to 18, 10.5 to 16, or 10.5 to 15.5.

[0060]

In a certain embodiment, the sparkling beverage of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1 of 0.1 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 of 0.1 to 5; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X3 of 5.5 to 12.5 is exhibited by the components (a) to (c).

[0061]

In another embodiment, the sparkling beverage of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1 of 3 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 of 1 to 5; and

(c) 10 to 35 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X3 of 5.5 to 12.5 is exhibited by the components (a) to (c). Preferably, the sparkling beverage of the present

invention further has an energy of 50 Kcal/100 ml or less, and $X1 + X2$ is 6 or more.

[0062]

In the sparkling beverage of the present invention, the sweetness intensity $X1$ of the natural sugar, the sweetness intensity $X2$ of the high-intensity sweetener, the sodium content, the sweetness intensity $X3$ exhibited by the sparkling beverage, and the energy of the sparkling beverage may be any values as long as $0.1 < (X1 + X2) \leq 20$ is satisfied. For example, it is also possible to combine any of the numerical values of the following sweetness intensity $X1$, sweetness intensity $X2$, sodium content, sweetness intensity $X3$, and energy.

[0063]

"The sweetness intensity $X1$ ": 0.1 to 0.5, 0.1 to 1.0, 0.1 to 1.5, 0.1 to 2.0, 0.1 to 2.5, 0.1 to 3.0, 0.1 to 3.5, 0.1 to 4.0, 0.1 to 4.5, 0.1 to 5.0, 0.5 to 1.0, 0.5 to 1.5, 0.5 to 2.0, 0.5 to 2.5, 0.5 to 3.0, 0.5 to 3.5, 0.5 to 4.0, 0.5 to 4.5, 0.5 to 5.0, 1.0 to 1.5, 1.0 to 2.0, 1.0 to 2.5, 1.0 to 3.0, 1.0 to 3.5, 1.0 to 4.0, 1.0 to 4.5, 1.0 to 5.0, 1.5 to 2.0, 1.5 to 2.5, 1.5 to 3.0, 1.5 to 3.5, 1.5 to 4.0, 1.5 to 4.5, 1.5 to 5.0, 2.0 to 2.5, 2.0 to 3.0, 2.0 to 3.5, 2.0 to 4.0, 2.0 to 4.5, 2.0 to 5.0, 2.5 to 3.0, 2.5 to 3.5, 2.5 to 4.0, 2.5 to 4.5, 2.5 to 5.0, 3.0 to 3.5, 3.0 to 4.0, 3.0 to 4.5, or 3.0 to 5.0.

[0068]

In addition, in the sparkling beverage of the present invention, the sweetness intensity X1 of the natural sugar, the sweetness intensity X2 of the high-intensity sweetener, the sodium content, the sweetness intensity X3 exhibited by the sparkling beverage, and the energy of the sparkling beverage are not limited to the combinations of the above-mentioned numerical values, and any of the numerical values of the sweetness intensity X1, the sweetness intensity X2, the sodium content, the sweetness intensity X3, and the energy described in the present specification can be combined within a range of satisfying $0.1 < (X1 + X2) \leq 20$.

[0069]

The sparkling beverage of the present invention, can appropriately contain, for example, an antioxidant (e.g., sodium erythorbate), an emulsifier (e.g., sucrose esters of fatty acids, sorbitan esters of fatty acids, and polyglycerin esters of fatty acids), and a flavoring agent as long as the effects of the present invention are not impaired.

[0070]

In a specific aspect, the present invention provides the following sparkling beverage (hereinafter, referred to as "the sparkling beverage A of the present invention").

A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1;

(b) a high-intensity sweetener selected from the group consisting of rebaudioside M, rebaudioside D, and a combination thereof in an amount corresponding to a sweetness intensity X2; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0071]

In the sparkling beverage A of the present invention, preferable ranges of the sweetness intensity X1, the sweetness intensity X2, the sodium content, the sweetness intensity X3, the concentration P2 of the high-intensity sweetener, and the energy are, for example, as follows. These numerical values can be arbitrarily combined within a range of satisfying $0.1 < (X1 + X2) \leq 20$.

[0078]

In the sparkling beverage A of the present invention, the forms of the natural sugar (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose) and sodium are defined as described in the section for the sparkling beverage of the present invention.

[0079]

In another specific aspect, the present invention provides the following sparkling beverage (hereinafter, referred to as "the sparkling beverage B of the present invention").

A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_1 ;

(b) a Luo han guo extract in an amount corresponding to a sweetness intensity X_2 ; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X_3 is exhibited by the components (a) to (c), and $0.1 < (X_1 + X_2) \leq 20$ is satisfied.

[0080]

In the sparkling beverage B of the present invention, preferable ranges of the sweetness intensity X_1 , the sweetness intensity X_2 , the sodium content, the sweetness intensity X_3 , the content P2 of the Luo han guo extract, and the energy are, for example, as follows. These numerical values can be arbitrarily combined within a range of satisfying $0.1 < (X_1 + X_2) \leq 20$.

[0081]

[0087]

In addition, in the sparkling beverage B of the present invention, in the sparkling beverage B of the present invention, the forms of the natural sugar (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose) and sodium are defined as described in the section for the sparkling beverage of the present invention.

[0088]

In another specific aspect, the present invention provides the following sparkling beverage (hereinafter, referred to as "the sparkling beverage C of the present invention").

A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1;

(b) mogroside V in an amount corresponding to a sweetness intensity X2; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0089]

In the sparkling beverage C of the present invention, preferable ranges of the sweetness intensity X1, the sweetness intensity X2, the sodium content, the sweetness intensity X3, the content P2 (ppm) of mogroside V, and the energy are, for example, as follows. These numerical values can be arbitrarily combined within a range of satisfying $0.1 < (X1 + X2) \leq 20$.

to 16, 8.5 to 15.5, 8.5 to 14, 9.0 to 18, 9.0 to 16, 9.0 to 15.5, 9.0 to 14, 9.5 to 18, 9.5 to 16, 9.5 to 15.5, 9.5 to 14, 10.0 to 18, 10.0 to 16, 10.0 to 15.5, 10.5 to 18, 10.5 to 16, or 10.5 to 15.5.

[0094]

"The amount of mogroside V P2 (ppm)": 20 to 550, 25 to 550, 30 to 550, 35 to 550, 40 to 550, 45 to 550, 50 to 550, 55 to 550, 20 to 540, 25 to 540, 30 to 540, 35 to 540, 40 to 540, 45 to 540, 50 to 540, 55 to 540, 20 to 530, 25 to 530, 30 to 530, 35 to 530, 40 to 530, 45 to 530, 50 to 530, 55 to 530, 20 to 520, 25 to 520, 30 to 520, 35 to 520, 40 to 520, 45 to 520, 50 to 520, 55 to 520, 20 to 510, 25 to 510, 30 to 510, 35 to 510, 40 to 510, 45 to 510, 50 to 510, 55 to 510, 20 to 505, 25 to 505, 30 to 505, 35 to 505, 40 to 505, 45 to 505, 50 to 505, 55 to 505, 20 to 500, 25 to 500, 30 to 500, 35 to 500, 40 to 500, 45 to 500, 50 to 500, 55 to 500, 20 to 495, 25 to 495, 30 to 495, 35 to 495, 40 to 495, 45 to 495, 50 to 495, 55 to 495, 20 to 490, 25 to 490, 30 to 490, 35 to 490, 40 to 490, 45 to 490, 50 to 490, 55 to 490, 1 to 700, 5 to 700, 10 to 700, 15 to 700, 20 to 700, 25 to 700, 30 to 700, 35 to 700, 40 to 700, 45 to 700, 50 to 700, 55 to 700, 1 to 600, 5 to 600, 10 to 600, 15 to 600, 20 to 600, 25 to 600, 30 to 600, 35 to 600, 40 to 600, 45 to 600, 50 to 600, 55 to 600, 1 to 550, 1 to 540, 1 to 530, 1 to 520, 1 to 510, 1 to 505, 1 to 500, 1 to 495, 1 to 490, 5 to 550, 5 to 540, 5 to 530, 5 to 520, 5 to 510, 5 to 505, 5 to 500, 5 to 495, 5 to 490, 10 to 550, 10 to 540, 10 to 530, 10 to 520, 10 to 510, 10 to 505,

10 to 500, 10 to 495, 10 to 490, 15 to 550, 15 to 550, 15 to 530, 15 to 520, 15 to 510, 15 to 505, 15 to 500, 15 to 495, or 15 to 490.

[0095]

The energy: 0 to 50Kcal/100ml, 0 to 45Kcal/100ml, 0 to 40Kcal/100ml, 0 to 35Kcal/100ml, 0 to 30Kcal/100ml, 0 to 25Kcal/100ml, 0 to 20Kcal/100ml, 0 to 15Kcal/100ml, 0 to 10Kcal/100ml, 0 to 5Kcal/100ml, 5 to 50Kcal/100ml, 5 to 45Kcal/100ml, 5 to 40Kcal/100ml, 5 to 35Kcal/100ml, 5 to 30Kcal/100ml, 5 to 25Kcal/100ml, 5 to 20Kcal/100ml, 5 to 15Kcal/100ml, 5 to 10Kcal/100ml, 10 to 50Kcal/100ml, 10 to 45Kcal/100ml, 10 to 40Kcal/100ml, 10 to 35Kcal/100ml, 10 to 30Kcal/100ml, 10 to 25Kcal/100ml, 10 to 20Kcal/100ml, 10 to 15Kcal/100ml, 15 to 50Kcal/100ml, 15 to 45Kcal/100ml, 15 to 40Kcal/100ml, 15 to 35Kcal/100ml, 15 to 30Kcal/100ml, 15 to 25Kcal/100ml, 15 to 20Kcal/100ml, 20 to 50Kcal/100ml, 20 to 45Kcal/100ml, 20 to 40Kcal/100ml, 20 to 35Kcal/100ml, 20 to 30Kcal/100ml, 20 to 25Kcal/100ml, 25 to 50Kcal/100ml, 25 to 45Kcal/100ml, 25 to 40Kcal/100ml, 25 to 35Kcal/100ml, 25 to 30Kcal/100ml, 0 to 32Kcal/100ml, 0 to 24Kcal/100ml, 0 to 8Kcal/100ml, 0 to 4Kcal/100ml, 4 to 32Kcal/100ml, 4 to 24Kcal/100ml, 4 to 8Kcal/100ml, 8 to 32Kcal/100ml, 8 to 24Kcal/100ml, or 24 to 32Kcal/100ml.

[0096]

In addition, in the sparkling beverage C of the present invention, the forms of the natural sugar (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn

syrup, or lactose) and sodium are defined as described in the section for the sparkling beverage of the present invention.

[0097]

Further, another aspect of the present invention provides a sparkling beverage comprising:

(a) a natural sugar in an amount of 0.1 to 0.5 w/v%, 0.1 to 1.0 w/v%, 0.1 to 1.5 w/v%, 0.1 to 2.0 w/v%, 0.1 to 2.5 w/v%, 0.1 to 3.0 w/v%, 0.1 to 3.5 w/v%, 0.1 to 4.0 w/v%, 0.1 to 4.5 w/v%, 0.1 to 5.0 w/v%, 0.1 to 5.5 w/v%, 0.1 to 5.9 w/v%, 0.5 to 1.0 w/v%, 0.5 to 1.5 w/v%, 0.5 to 2.0 w/v%, 0.5 to 2.5 w/v%, 0.5 to 3.0 w/v%, 0.5 to 3.5 w/v%, 0.5 to 4.0 w/v%, 0.5 to 4.5 w/v%, 0.5 to 5.0 w/v%, 0.5 to 5.5 w/v%, 0.5 to 5.9 w/v%, 1.0 to 1.5 w/v%, 1.0 to 2.0 w/v%, 1.0 to 2.5 w/v%, 1.0 to 3.0 w/v%, 1.0 to 3.5 w/v%, 1.0 to 4.0 w/v%, 1.0 to 4.5 w/v%, 1.0 to 5.0 w/v%, 1.0 to 5.5 w/v%, 1.0 to 5.9 w/v%, 1.5 to 2.0 w/v%, 1.5 to 2.5 w/v%, 1.5 to 3.0 w/v%, 1.5 to 3.5 w/v%, 1.5 to 4.0 w/v%, 1.5 to 4.5 w/v%, 1.5 to 5.0 w/v%, 1.5 to 5.5 w/v%, 1.5 to 5.9 w/v%, 2.0 to 2.5 w/v%, 2.0 to 3.0 w/v%, 2.0 to 3.5 w/v%, 2.0 to 4.0 w/v%, 2.0 to 4.5 w/v%, 2.0 to 5.0 w/v%, 2.0 to 5.5 w/v%, or 2.0 to 5.9 w/v%;

(b) at least one high-intensity sweetener selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof in an amount of 20 to 550ppm, 25 to 550 ppm, 30 to 550 ppm, 35 to 550 ppm, 40 to 550 ppm, 45 to 550 ppm, 50 to 550 ppm, 55 to 550 ppm, 20 to 540 ppm, 25 to 540 ppm, 30 to 540 ppm,

35 to 540 ppm, 40 to 540 ppm, 45 to 540 ppm, 50 to 540 ppm, 55 to 540 ppm, 20 to 530 ppm, 25 to 530 ppm, 30 to 530 ppm, 35 to 530 ppm, 40 to 530 ppm, 45 to 530 ppm, 50 to 530 ppm, 55 to 530 ppm, 20 to 520 ppm, 25 to 520 ppm, 30 to 520 ppm, 35 to 520 ppm, 40 to 520 ppm, 45 to 520 ppm, 50 to 520 ppm, 55 to 520 ppm, 20 to 510 ppm, 25 to 510 ppm, 30 to 510 ppm, 35 to 510 ppm, 40 to 510 ppm, 45 to 510 ppm, 50 to 510 ppm, 55 to 510ppm, 20 to 505ppm, 25 to 505ppm, 30 to 505ppm, 35 to 505ppm, 40 to 505ppm, 45 to 505ppm, 50 to 505ppm, 55 to 505ppm, 20 to 500ppm, 25 to 500ppm, 30 to 500ppm, 35 to 500ppm, 40 to 500ppm, 45 to 500ppm, 50 to 500ppm, 55 to 500ppm, 20 to 495ppm, 25 to 495ppm, 30 to 495ppm, 35 to 495ppm, 40 to 495ppm, 45 to 495ppm, 50 to 495ppm, 55 to 495ppm, 20 to 490ppm, 25 to 490ppm, 30 to 490ppm, 35 to 490ppm, 40 to 490ppm, 45 to 490ppm, 50 to 490ppm, or 55 to 490ppm; and

(c) 6 to 60mg/100ml, 6 to 55mg/100ml, 6 to 50mg/100ml, 6 to 45mg/100ml, 6 to 40mg/100ml, 6 to 35mg/100ml, 6 to 30mg/100ml, 6 to 25mg/100ml, 6 to 20mg/100ml, 6 to 19mg/100ml, 6 to 18mg/100ml, 6 to 17mg/100ml, 6 to 16mg/100ml, 6 to 15mg/100ml, 6 to 14mg/100ml, 6 to 13mg/100ml, 6 to 12mg/100ml, 6 to 11mg/100ml, 6 to 10mg/100ml, 10 to 60mg/100ml, 10 to 55mg/100ml, 10 to 50mg/100ml, 10 to 45mg/100ml, 10 to 40mg/100ml, 10 to 35mg/100ml, 10 to 30mg/100ml, 10 to 25mg/100ml, 10 to 20mg/100ml, 10 to 19mg/100ml, 10 to 18mg/100ml, 10 to 17mg/100ml, 10 to 16mg/100ml, 10 to 15mg/100ml, 15 to 60mg/100ml, 15 to 55mg/100ml, 15 to 50mg/100ml, 15 to

45mg/100ml, 15 to 40mg/100ml, 15 to 35mg/100ml, 15 to 30mg/100ml, 15 to 25mg/100ml, 15 to 20mg/100ml, 20 to 60mg/100ml, 20 to 55mg/100ml, 20 to 50mg/100ml, 20 to 45mg/100ml, 20 to 40mg/100ml, 20 to 35mg/100ml, 20 to 30mg/100ml, 20 to 25mg/100ml, 25 to 60mg/100ml, 25 to 55mg/100ml, 25 to 50mg/100ml, 25 to 45mg/100ml, 25 to 40mg/100ml, 25 to 35mg/100ml, 25 to 30mg/100ml, 30 to 60mg/100ml, 30 to 55mg/100ml, 30 to 50mg/100ml, 30 to 45mg/100ml, 30 to 40mg/100ml, 30 to 35mg/100ml, 35 to 60mg/100ml, 35 to 55mg/100ml, 35 to 50mg/100ml, 35 to 45mg/100ml, 35 to 40mg/100ml, 40 to 60mg/100ml, 40 to 55mg/100ml, 40 to 50mg/100ml, or 40 to 45mg/100ml of sodium. [0098]

2. Method for producing sparkling beverage

Even in a sparkling beverage with a reduced energy (Kcal/100 ml) level by setting the amounts of the natural sugar and the high-intensity sweetener to low, it is possible to enhance the sweetness based on the natural sugar and the high-intensity sweetener by adding sodium in a concentration so low as to not be detectable by the human.

Accordingly, the present invention provides, as a further another aspect, the following method for producing a sparkling beverage with enhanced sweetness (hereinafter, referred to as "the method of the present invention").

A method for producing a sparkling beverage, comprising: to a raw material,

(i) adding (a) a natural sugar in an amount corresponding to a sweetness intensity X1 and (b) a high-

intensity sweetener in an amount corresponding to a sweetness intensity X2; and

(ii) adding (c) sodium such that a sodium concentration in the beverage is 6 to 60 mg/100 ml,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0099]

The sparkling beverage produced by the method of the present invention is the sparkling beverage of the present invention described in the above section "1. Sparkling beverage having improved taste quality exhibited by natural sugar and high-intensity sweetener". Additionally, the "raw material" in the method of the present invention can be each material or a mixture thereof required for production of a sparkling beverage and can further include an additional components such as a preservative, a flavoring agent, a carrier, or a milk component. The "raw material" can be made up of a plurality of materials. However, regardless of the type of the raw material, the finally produced sparkling beverage of the present invention does not include a substance that exhibits sweetness other than the components (a) and (b) as a

sweetener. In an aspect of the present invention, a syrup of concentrated components contained in a sparkling beverage of the present invention is prepared, and a sparkling beverage can be prepared by adding sparkling drinking water for adjusting to a predetermined concentration or by supplying carbon dioxide gas after addition of non-sparkling drinking water. Alternatively, without preparing a syrup as described above, the sparkling beverage of the present invention can be prepared by directly adding predetermined components to a sparkling beverage.

[0100]

In the method of the present invention, any of the following steps (i) and (ii) may be performed first:

(i) a step of adding (a) a natural sugar in an amount corresponding to a sweetness intensity X1 and (b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2; and

(ii) a step of adding (c) sodium in such a way that the sodium concentration in the beverage is 6 to 60 mg/100 ml.

[0101]

In step (i), (a) a natural sugar in an amount corresponding to a sweetness intensity X1 and (b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 are added to a raw material, where (a) a natural sugar in an amount corresponding to a sweetness intensity X1 and (b) a high-intensity sweetener

in an amount corresponding to a sweetness intensity X2 may be separately added.

Furthermore, when (a) a natural sugar in an amount corresponding to a sweetness intensity X1 is added, the natural sugar in an amount corresponding to the sweetness intensity X1 need not be added at once and may be added in several batches. Similarly, when (b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 is added, the natural sugar in an amount corresponding to the sweetness intensity X2 need not be added at once and may be added in several batches.

In addition, as another aspect, it is also possible to adjust the amounts of a natural sugar and a high-intensity sweetener contained in the finally produced sparkling beverage to the amounts corresponding to a sweetness intensity X1 and a sweetness intensity X2, respectively, by adding a mixture of the natural sugar and the high-intensity sweetener in several batches.

[0102]

In step (ii), also when (c) sodium is added in such a way that the sodium concentration in the beverage is 6 to 60 mg/100 ml, sodium need not be added at once and may be added in several batches.

Sodium that is added to a raw material in step (ii) may be, for example, at least one form selected from the group consisting of sodium chloride, sodium hydroxide, sodium malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium

bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof. In addition, since sodium can be contained in water and flavor of a sparkling beverage, the amount of sodium is adjusted such that the total content of such sodium derived from the raw material and the additional sodium is 6 to 60 mg/100 ml.

[0103]

The "addition" herein means not only the actual operation of adding either of the components (a), (b), and (c) to a raw material but also the operation of adjusting the amounts of the components (a), (b), and (c) in the finally produced sparkling beverage to an amount corresponding to a sweetness intensity X1, an amount corresponding to a sweetness intensity X2, and 6 to 60 mg/100 ml, respectively, through the production process of a sparkling beverage of the present invention.

For example, in a case in which a first raw material contains a milk component, a grain, a bean, or an extract thereof and thereby contains one or more of the components (a), (b), and (c) in the raw material in advance, a second raw material to be mixed with the first raw material also contains the components (a), (b), and (c), and a sparkling beverage of the present invention can be produced by mixing the first and second raw materials, the operation of independently adding the components (a), (b), and (c) to

the raw materials is not carried out. However, in the method of the present invention, steps (i) and (ii) are considered to have been carried out as long as the finally produced sparkling beverage of the present invention contains (a) a natural sugar in an amount corresponding to a sweetness intensity X1, (b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2, and (c) 6 to 60 mg/100 ml of sodium.

[0104]

When the sparkling beverage of the present invention is a packaged beverage, the method for producing a beverage of the present invention includes a step of filling a container with the sparkling beverage. In addition, when provided as a packaged beverage, sterilization of the sparkling beverage before or after filling a container with the sparkling beverage allows long-term storage and is therefore preferable. For example, when provided as a canned sparkling beverage, a can is filled with a predetermined amount of the sparkling beverage, and for example, heat sterilization can be performed by carrying out retort sterilization at 120 to 125°C for about 5 to 20 minutes. In addition, when provided as a beverage packed in a PET bottle, paper pack, or bottle, a packaged beverage can be obtained by performing, for example, UHT sterilization by keeping 130 to 145°C for about 2 to 120 seconds and hot pack filling or low-temperature aseptic filling of a predetermined amount of the beverage.

[0105]

In the method of the present invention, the "sparkling beverage", the "natural sugar", the "sweetness intensity X1", the "high-intensity sweetener", the "sweetness intensity X2", the sodium content, the form of sodium in the sparkling beverage, the "sweetness intensity X3", and the energy are defined as described in the above section for the sparkling beverage, and the numerical values described in the above section for the sparkling beverage are applicable as they are. In addition, examples of the "combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose" and the "combination of high-intensity sweetener" are the same as those described in the above section for the sparkling beverage.

[0106]

In a certain embodiment, the sparkling beverage produced by the method of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1 of 0.1 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 of 0.1 to 5; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity X3 of 5.5 to 12.5 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 12.5$ is satisfied.

[0107]

In another embodiment, the sparkling beverage produced by the method of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_1 of 3 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_2 of 1 to 5; and

(c) 10 to 35 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity of 5.5 to 12.5 is exhibited by the components (a) to (c), and $0.1 < (X_1 + X_2) \leq 12.5$ is satisfied. Furthermore, in the sparkling beverage of the present invention, preferably, the energy is 50 Kcal/100 ml or less, and $(X_1 + X_2)$ is 6 or more.

[0108]

In further another embodiment, the sparkling beverage produced by the method of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_1 of 0.1 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_2 of 0.1 to 3; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity of 2.0 to 12.0 is exhibited by the components (a) to (c), and $0.1 < (X_1 + X_2) \leq 12.5$ is satisfied.

[0109]

In another embodiment, the sparkling beverage produced by the method of the present invention is a sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X1 of 3 to 5;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2 of 1 to 3; and

(c) 6 to 60 mg/100 ml of sodium,

wherein sweetness of a sweetness intensity of 2.0 to 12.0 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 12.5$ is satisfied.

[0110]

In a specific aspect, the present invention provides the following method (hereinafter, referred to as "the method A of the present invention").

A method for producing a sparkling beverage, the method comprising the steps of:

(i) adding (a) a natural sugar in an amount of a sweetness intensity X1 and (b) a high-intensity sweetener selected from the group consisting of rebaudioside M, rebaudioside D, and a combination thereof in an amount of a sweetness intensity X2; and

(ii) adding (c) sodium in such a way that the sodium content in the beverage is 6 to 60 mg/100 ml,

to a raw material,

wherein sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0111]

In the method A of the present invention, the "sparkling beverage", the "natural sugar" (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose), the "sweetness intensity X1", the "high-intensity sweetener", the "sweetness intensity X2", the sodium content, the form of sodium in the sparkling beverage, the "sweetness intensity X3", and the energy are defined as described in the above section for the sparkling beverage A, and the numerical values described in the above section for the sparkling beverage A are applicable as they are. In addition, the sparkling beverage in the method A of the present invention corresponds to the sparkling beverage A of the present invention, and the above items for the sparkling beverage A of the present invention are applicable as they are. Furthermore, the "raw material", the "addition", the order of steps (i) and (ii), and the addition mode of each component in the method A of the present invention are defined as described for the method of the present invention.

[0112]

In another specific aspect, the present invention provides the following method (hereinafter, referred to as "the method B of the present invention").

A method for producing a sparkling beverage, the method comprising the steps of:

(i) adding (a) a natural sugar in an amount of a sweetness intensity X1 and (b) a Luo han guo extract in an amount of a sweetness intensity X2; and

(ii) adding (c) sodium in such a way that the sodium content in the beverage is 6 to 60 mg/100 ml,

to a raw material,

wherein sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0113]

In the method B of the present invention, the "sparkling beverage", the "natural sugar" (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose), the "sweetness intensity X1", the "Luo han guo extract", the "sweetness intensity X2", the sodium content, the form of sodium in the sparkling beverage, the "sweetness intensity X3", and the energy are defined as described in the above section for the sparkling beverage B, and the numerical values described in the above section for the sparkling beverage B are applicable as they are. In addition, the sparkling beverage in the method B of the present invention corresponds to the sparkling beverage B of the present invention, and the above items for the sparkling beverage B of the present invention are applicable as they are. Furthermore, the "raw material", the "addition", the order of steps (i) and (ii), and the addition mode of each component in the method B of the

present invention are defined as described for the method of the present invention.

[0114]

In another specific aspect, the present invention provides the following method (hereinafter, referred to as "the method C of the present invention").

A method for producing a sparkling beverage, the method comprising the steps of:

(i) adding (a) a natural sugar in an amount of a sweetness intensity X1 and (b) mogroside V in an amount of a sweetness intensity X2; and

(ii) adding (c) sodium in such a way that the sodium content in the beverage is 6 to 60 mg/100 ml,

to a raw material,

wherein sweetness of a sweetness intensity X3 is exhibited by the components (a) to (c), and $0.1 < (X1 + X2) \leq 20$ is satisfied.

[0115]

In the method C of the present invention, the "sparkling beverage", the "natural sugar" (including examples of the combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose), the "sweetness intensity X1", the "mogroside V", the "sweetness intensity X2", the sodium content, the form of sodium in the sparkling beverage, the "sweetness intensity X3", and the energy are defined as described in the above section for the sparkling beverage C, and the numerical values described in the above section for the

sparkling beverage C are applicable as they are. In addition, the sparkling beverage in the method C of the present invention corresponds to the sparkling beverage C of the present invention, and the above items for the sparkling beverage C of the present invention are applicable as they are. Furthermore, the "raw material", the "addition", the order of steps (i) and (ii), and the addition mode of each component in the method C of the present invention are defined as described for the method of the present invention.

[0116]

In the sparkling beverage produced by a method of the present invention,

the sweetness intensity X1 of the natural sugar, the sweetness intensity X2 of the high-intensity sweetener, the sodium content, and the sweetness intensity X3 exhibited by the sparkling beverage can be any values as long as $0.1 < (X1 + X2) \leq 20$ is satisfied. For example, it is also possible to combine any of the numerical values of the sweetness intensity X1, the sweetness intensity X2, the sodium content, the sweetness intensity X3, and the energy shown in the section for the sparkling beverage of the present invention.

[0117]

3. Concentrate for providing sparkling beverage

The present invention provides, as another embodiment, a concentrate for providing the sparkling beverage of the above present invention (hereinafter, referred to as "the

concentrate of the present invention"). In an aspect of the present invention, the concentrate of the present invention comprises:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_4 ;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_5 ; and

(c) 60 to 600 mg/100 ml of sodium,

wherein $(X_4 + X_5) \leq 200$, preferably $1 < (X_4 + X_5) \leq 200$, and more preferably $50 < (X_4 + X_5) \leq 200$ are satisfied.

[0118]

The concentrate of the present invention is used for providing a sparkling beverage by diluting in an arbitrary ratio. The "sparkling beverage" is the same as that described in "1. Sparkling beverage having improved taste quality exhibited by natural sugar and high-intensity sweetener". For example, the concentrate of the present invention can be used in a beverage as a syrup or an undiluted solution. In this instance, the concentrate can be diluted 2-fold, 3-fold, 4-fold, 5-fold, 6-fold, 7-fold, 8-fold, 9-fold, or 10-fold and used. In addition, the concentrate of the present invention is concentrated and is therefore preferable in the aspects of preservability and transportability. The concentrate of the present invention may be solid or liquid.

[0119]

The concentrate of the present invention is a 2 to 10-fold concentrate, preferably 3 to 9-fold concentrate,

more preferably 4 to 8-fold concentrate, and further preferably 5 to 7-fold concentrate of the sparkling beverage of the present invention.

[0120]

The concentrate in an aspect of the present invention is a 6-fold concentrate of the sparkling beverage of the present invention and comprises:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_6 ;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_7 ; and

(c) 36 to 360 mg/100 ml of sodium,

wherein $(X_6 + X_7) \leq 120$, preferably $0.6 < (X_6 + X_7) \leq 120$, and more preferably $30 < (X_6 + X_7) \leq 120$ are satisfied.

[0121]

The concentrate in another aspect of the present invention is a 8-fold concentrate of the sparkling beverage of the present invention and comprises:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_8 ;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_9 ; and

(c) 48 to 480 mg/100 ml of sodium,

wherein $(X_8 + X_9) \leq 160$, preferably $0.8 < (X_8 + X_9) \leq 160$, and more preferably $40 < (X_8 + X_9) \leq 160$ are satisfied.

[0122]

4. Method for enhancing sweetness of sparkling beverage

The present invention provides, as another embodiment, a method for enhancing a sweetness of a sparkling beverage (hereinafter, referred to as "the sweetness enhancing method of the present invention"). In an aspect of the present invention, the sweetness enhancing method of the present invention is characterized by containing

(a) a natural sugar in an amount corresponding to a sweetness intensity X1,

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X2, and

(c) 6 to 60 mg/100 ml of sodium
in a sparkling beverage.

[0123]

According to the sweetness enhancing method of the present invention, the sweetness of the sparkling beverage is enhanced, and it is possible to provide a sparkling beverage having sweetness higher than the mere sum of the sweetness intensity when the component (a) is added to the sparkling beverage and the sweetness intensity when the component (b) is added to the sparkling beverage. In the sweetness enhancing method of the present invention, the "sparkling beverage", the "natural sugar", the "sweetness intensity X1", the "high-intensity sweetener", the "sweetness intensity X2", the sodium content, the form of sodium in the sparkling beverage, the "sweetness intensity X3", and the energy are defined as described in the above section for the sparkling beverage, and the numerical values described in the above section for the sparkling

beverage are applicable as they are. In addition, examples of the "combination of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, or lactose" and the "combination of high-intensity sweetener" are the same as those described in the above section for the sparkling beverage.

[0124]

In the present specification, the term "at least" means that the number of a specific item may be greater than or equal to the mentioned number. In addition, in the present application, the term "about" means that a subject matter is in a range of $\pm 25\%$, $\pm 10\%$, $\pm 5\%$, $\pm 3\%$, $\pm 2\%$, or $\pm 1\%$ of the numerical value following the "about". For example, "about 10" means a range of 7.5 to 12.5.

Example

[0125]

Hereinafter, the present invention will be specifically described with reference to examples but is not limited to the following examples.

Incidentally, in examples shown below, the sodium content contained in a beverage as a base before the addition of various additives was measured by atomic absorption spectrometry using SpectrAA240FS (manufactured by Agilent Technologies, Inc.). In addition, the sodium content in a beverage sample after the addition of various additives is that obtained by adding the sodium content contained in the various additives calculated from the

amounts of the additives to the sodium content in the beverage as the base measured by the above method.

[0126]

[Example 1] Evaluation of taste quality improvement effect by sodium

Experiment method

Natural sugars {sucrose (manufactured by Pacific Sugar Mfg. Co., Ltd.) and glucose (manufactured by Showa Sangyo Co., Ltd.)}, rebaudioside D (RebD) (purity: 95% or more), and sodium gluconate were dissolved in a sparkling beverage (carbonated water (3.0 kgf/cm²) and energy drink flavor, sodium content: 0 mg/100 ml) in the ratios shown in Table 2 below to prepare beverage samples. In addition, the solution not containing sodium gluconate was used as sample 1.

Incidentally, the Brix in Table 2 was calculated from the concentrations of the natural sugars, the sodium content in a beverage was calculated from the amount of sodium gluconate added, and the energy (kcal/100 ml) was calculated by taking those derived from RebD and sodium as 0 (kcal/100 ml).

Table 2

Content	Sample 1	1-1	1-2	1-3	1-4
Sucrose (w/v%)	1.0	1.0	1.0	1.0	1.0
Glucose (w/v%)	3.5	3.5	3.5	3.5	3.5
Brix (derived from sucrose + glucose)	4.5	4.5	4.5	4.5	4.5
RebD (ppm)	208	208	208	208	208
Sodium gluconate (g/L)	0	0.95	1.90	2.85	3.80

Sodium content in beverage sample (mg/100ml)	0	10	20	30	40
Energy (Kcal/100ml)	18	18	18	18	18

[0127]

The taste quality improvement effect by sodium was verified by sensory comparison of taste qualities of these beverage samples. The taste qualities as sensory evaluation items were "intensity of sweetness", "intensity of flavor (aroma)", "intensity of odd taste (such as bitter taste and astringent taste)", "intensity of saltiness", and "carbonated feeling", and the verification was carried out by those (four persons) who received sensory training as panelists.

First, each panelist calculated the "sensory evaluation score" for each taste quality of each beverage sample based on the common taste quality evaluation criteria possessed by the panelists through daily training.

The "sensory evaluation score" a difference in the taste quality from sample 1 quantified in a range of -3.0 to +3.0 based on the degree of taste quality of sample 1 defined as "0" (reference). The criteria of the "sensory evaluation score" of each item are as follows.

(Sensory evaluation score)

" +3.0": it is felt that the taste quality as an object is very strong compared with sample 1;

" +2.0": it is felt that the taste quality as an object is strong compared with sample 1;

" +1.0": it is felt that the taste quality as an object is slightly strong compared with sample 1;

"0": it is felt that the taste quality as an object is equal to sample 1;

"-1.0": it is felt that the taste quality as an object is slightly weak compared with sample 1;

"-2.0": it is felt that the taste quality as an object is weak compared with sample 1; and

"-3.0": it is felt that the taste quality as an object is very weak compared with sample 1.

Incidentally, in light of the above criteria, for example, when it was judged that the taste quality was between "+1.0" and "+2.0", it was scored as "+1.5" in 0.5 increments.

[0128]

The "sensory evaluation score" calculated by each panelist was converted to a "converted score" based on the following criteria, and the total value of the converted scores of four panelists was calculated for each taste quality.

(Converted score)

Converted score "3": a sensory evaluation score of +1.5 or more;

Converted score "2": a sensory evaluation score of +1.0 or more and less than +1.5;

Converted score "1": a sensory evaluation score of +0.5 or more and less than +1.0;

Converted score "0": a sensory evaluation score of higher than -0.5 and less than +0.5;

Converted score "-1": a sensory evaluation score of higher than -1.0 and -0.5 or less;

Converted score "-2": a sensory evaluation score of higher than -1.5 and -1.0 or less; and

Converted score "-3": a sensory evaluation score of -1.5 or less.

Incidentally, regarding the "intensity of sweetness" and the "intensity of flavor", a larger total value of converted scores is preferable, and regarding the "intensity of odd taste", the "intensity of saltiness" and the "carbonated feeling", a smaller total value of converted scores is preferable.

[0129]

Results

The results of the calculated total value of converted scores of each taste quality are shown in Table 3.

Table 3

Taste quality	Sample 1	1-1	1-2	1-3	1-4
Intensity of sweetness	0	1	2	1	3
Intensity of flavor	0	0	1	2	2
Intensity of odd taste	0	0	0	0	0
Intensity of saltiness	0	0	0	1	3
Carbonated feeling	0	-2	-3	-1	2

[0130]

[Example 2] Evaluation of taste quality improvement effect by various high-intensity sweeteners and sodium

[Example 2-1] Evaluation of taste quality improvement effect by mogroside V and sodium

Experiment method

As in Example 1, natural sugars {sucrose (manufactured by Pacific Sugar Mfg. Co., Ltd.), glucose (manufactured by Showa Sangyo Co., Ltd.)}, a high-intensity sweetener {mogroside V (MogV) (purity: 95% or more)}, and sodium gluconate were dissolved in a sparkling beverage (carbonated water (3.0 kgf/cm²) and energy drink flavor, sodium content: 0 mg/100 ml) in the ratios shown in Table 4-1 below to prepare beverage samples. In addition, the solution not containing sodium gluconate was used as sample 2 (containing MogV). Incidentally, the Brix in Table 4-1 was calculated from the concentrations of the natural sugars, the sodium content in a beverage was calculated from the amount of sodium gluconate added, and the energy (kcal/100 ml) was calculated by taking those derived from MogV and sodium as 0 (kcal/100 ml).

Table 4-1

Content	Sample 2	2-1
Sucrose (w/v%)	1.0	1.0
Glucose (w/v%)	3.5	3.5
Brix (derived from sucrose + glucose)	4.5	4.5
MogV (ppm)	208	208
Sodium gluconate (g/L)	0	1.90
Sodium content in beverage sample (mg/100ml)	0	20

Energy (Kcal/100ml)	18	18
---------------------	----	----

[0131]

The taste quality improvement effect by sodium was verified by sensory comparison of taste qualities of these beverage samples. The taste qualities as sensory evaluation items were "intensity of sweetness", "intensity of flavor (aroma)", "intensity of odd taste", "intensity of saltiness", and "carbonated feeling", and the verification was carried out by those (four persons) who received sensory training as panelists. Specifically, evaluation was performed as in Example 1, the "sensory evaluation score" calculated by each panelist was converted to a "converted score", and the total value of the converted scores of four panelists was calculated for each taste quality. In samples 2 and 2-1, the score of sample 2 was used as reference (0 point).

[0132]

Results

The results of the calculated total value of converted scores of each taste quality are shown in Table 4-2.

Table 4-2

Taste quality	Sample 2	2-1
Intensity of sweetness	0	3
Intensity of flavor	0	3
Intensity of odd taste	0	0
Intensity of saltiness	0	0
Carbonated feeling	0	-8

[0133]

[Example 2-2] Evaluation of taste quality improvement effect by rebaudioside M and sodium

Experiment method

As in Example 2-1, natural sugars {sucrose (manufactured by Pacific Sugar Mfg. Co., Ltd.), glucose (manufactured by Showa Sangyo Co., Ltd.)}, a high-intensity sweetener {rebaudioside M (RebM) (purity: 99% or more)}, and sodium gluconate were dissolved in a sparkling beverage (carbonated water (3.0 kgf/cm²) and energy drink flavor, sodium content: 0 mg/100 ml) in the ratios shown in Table 5-1 below to prepare beverage samples. In addition, the solution not containing sodium gluconate was used as sample 2A (containing RebM). Incidentally, the Brix in Table 5-1 was calculated from the concentrations of the natural sugars, the sodium content in a beverage was calculated from the amount of sodium gluconate added, and the energy (kcal/100 ml) was calculated by taking those derived from RebM and sodium as 0 (kcal/100 ml).

Table 5-1

Content	Sample 2A	2-2
Sucrose (w/v%)	1.0	1.0
Glucose (w/v%)	3.5	3.5
Brix (derived from sucrose + glucose)	4.5	4.5
RebM (ppm)	208	208
Sodium gluconate (g/L)	0	1.90
Sodium content in beverage sample (mg/100ml)	0	20
Energy (Kcal/100ml)	18	18

[0134]

The taste qualities as sensory evaluation items were "intensity of sweetness", "intensity of flavor (aroma)", "intensity of odd taste (such as bitter taste and astringent taste)", "intensity of saltiness", and "carbonated feeling" and the evaluation was carried out by those (four persons) who received sensory training as panelists. Specifically, evaluation was performed as in Example 1, the "sensory evaluation score" calculated by each panelist was converted to a "converted score", and the total value of the converted scores of four panelists was calculated for each taste quality. In samples 2A and 2-2, the score of sample 2A was used as reference (0 point).

[0135]

Results

The results of the calculated total value of converted scores of each taste quality are shown in Table 5-2.

Table 5-2

Taste quality	Sample 2A	2-2
Intensity of sweetness	0	3
Intensity of flavor	0	3
Intensity of odd taste	0	-4
Intensity of saltiness	0	0
Carbonated feeling	0	-4

[0136]

[Example 3] Evaluation of taste quality improvement effect by sparkling beverage in various flavors and sodium

Experiment method

As in Example 1, natural sugars {sucrose (manufactured by Pacific Sugar Mfg. Co., Ltd.), glucose (manufactured by Showa Sangyo Co., Ltd.)}, rebaudioside D (RebD) (purity: 95% or more), and sodium gluconate were dissolved in a sparkling beverage (carbonated water (3.0 kgf/cm²) and cola flavor, sodium amount: 0 mg/100 ml) in the ratios shown in Table 6 below to prepare beverage samples. The solution not containing sodium gluconate was used as sample 3. Additionally, Table 6 shows sample 1-2 in Example 1 for comparison.

Incidentally, the Brix in Table 6 was calculated from the concentrations of the natural sugar, the sodium content in a beverage was calculated from the amount of sodium gluconate added, and the energy (kcal/100 ml) was calculated by taking the components of the energy derived from RebD and sodium as 0 (kcal/100 ml).

Table 6

Content	Sample 3	3-1	1-2
Flavor	Cola	Cola	Energy drink
Sucrose (w/v%)	1.0	1.0	1.0
Glucose (w/v%)	3.5	3.5	3.5
Brix (derived from sucrose + glucose)	4.5	4.5	4.5
RebD (ppm)	208	208	208
Sodium gluconate (g/L)	0	1.90	1.90
Sodium content in beverage sample (mg/100ml)	0	20	20

Energy (Kcal/100ml)	18	18	18
------------------------	----	----	----

[0137]

The taste quality improvement effect by sodium was verified by sensory comparison of taste qualities of these beverage samples. The taste qualities as sensory evaluation items were "intensity of sweetness", "intensity of flavor (aroma)", "intensity of odd taste (such as bitter taste and astringent taste)", "intensity of saltiness", and "carbonated feeling", and the evaluation was carried out by those (four persons) who received sensory training as panelists. Specifically, evaluation was performed as in Example 1, the "sensory evaluation score" calculated by each panelist was converted to a "converted score", and the total value of the converted scores of four panelists was calculated for each taste quality.

[0138]

Results

The results of the calculated total value of converted scores of each taste quality are shown in Table 7.

Table 7

[0140]

Method for collecting sample for aroma component analysis

About 50 ml of a beverage sample was placed in an impinger. While flowing clean nitrogen at a flow rate of 100 ml/min from one end of the impinger, the gas flowing into a tedlar bag attached to the other end was collected for 10 minutes.

[0141]

Apparatus and analysis conditions

The apparatus of gas chromatography (GC) analysis and the conditions of measurement were as follows:

Apparatus: 6890N, manufactured by Agilent Technologies Japan, Ltd.;

Column: DB-1701 (0.25 mm I.D. × 30 m, df = 0.25 μm);

Column temperature: 50°C → 280°C (20°C/min, hold);

Inlet temperature: 260°C;

Carrier gas: helium, 1.5 mL/min

Detector: flame ionization detector (FID), 280°C;

Injection method: split method (1 : 5); and

Injection volume: 0.15 mL.

The peaks obtained by analysis of sample 4-1 and sample 4 were compared with each other, and the area value of the peak appearance time 5.9 minutes judged as the peak of an aroma component was calculated. The results are shown in Table 9. The results demonstrated that an effect of improving the aroma is caused by adding sodium.

Table 9

	Sample 4	4-1
Peak area value of peak appearance time 5.9 min	No detection	1.8

Industrial Applicability

[0142]

The method of the present invention provides a method for increasing the sweetness of a sparkling beverage or sweet composition, which is not a simple sweetness that is obtained by increasing the amounts of a natural sugar and a high-intensity sweetener used, and providing good taste.

Claims

1. A sparkling beverage comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity X_1 ;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity X_2 ; and

(c) 6 to 60 mg/100 ml of sodium,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

$0.1 < (X_1 + X_2) \leq 20$ is satisfied.

2. The sparkling beverage according to Claim 1, wherein a sodium content is 10 to 50 mg/100 ml.

3. The sparkling beverage according to Claim 1 or 2, wherein energy is 50 Kcal/100 ml or less.

4. The sparkling beverage according to any one of Claims 1 to 3, wherein X_1 is 0.1 to 5.9.

5. The sparkling beverage according to any one of Claims 1 to 4, wherein a gas pressure is 2.2 to 4.0 kgf/cm².

6. The sparkling beverage according to any one of Claims 1 to 5, which is a beverage of orange flavor, lemon flavor, lime flavor, grape flavor, ginger ale flavor, energy drink flavor, cassis flavor, or cola flavor.

7. The sparkling beverage according to any one of Claims 1 to 6, wherein the natural sugar is at least one selected

from the group consisting of glucose, sucrose, fructose, maltose, oligosaccharide, high-fructose corn syrup, lactose, psicose, allose, tagatose, and a combination thereof.

8. The sparkling beverage according to any one of Claims 1 to 7, wherein the high-intensity sweetener is at least one selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof.

9. The sparkling beverage according to any one of Claims 1 to 8, wherein the sodium is at least one selected from the group consisting of sodium chloride, sodium hydroxide, sodium malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof.

10. The sparkling beverage according to any one of Claims 1 to 9, wherein the sparkling beverage comprises 10 to 35 mg/100 ml of sodium, energy is 50 Kcal/100 ml or less, and $X1 + X2$ is 6 or more.

11. The sparkling beverage according to any one of Claims 1 to 10, which is packed in a container.

12. A method for producing a sparkling beverage, comprising: to a raw material,

(i) adding (a) a natural sugar in an amount corresponding to a sweetness intensity $X1$ and (b) a high-

intensity sweetener in an amount corresponding to a sweetness intensity X2; and

(ii) adding (c) sodium such that a sodium content in the beverage is 6 to 60 mg/100 ml,

wherein the high-intensity sweetener comprises at least one high-intensity sweetener b1 selected from the group consisting of rebaudioside M, rebaudioside D, rebaudioside N, rebaudioside O, rebaudioside E, a Luo han guo extract, mogroside V, and thaumatin; and

$0.1 < (X1 + X2) \leq 20$ is satisfied.

13. The method according to Claim 12, wherein in the sparkling beverage, the sodium content is 10 to 50 mg/100 ml.

14. The method according to Claim 12 or 13, wherein energy of the sparkling beverage is 50 Kcal/100 ml or less.

15. The method according to any one of Claims 12 to 14, wherein X1 is 0.1 to 5.9.

16. The method according to any one of Claims 12 to 15, wherein a gas pressure of the sparkling beverage is 2.2 to 4.0 kgf/cm².

17. The method according to any one of Claims 12 to 16, wherein the sparkling beverage is a beverage of orange flavor, lemon flavor, lime flavor, grape flavor, ginger ale flavor, energy drink flavor, cassis flavor, or cola flavor.

18. The method according to any one of Claims 12 to 17, wherein the natural sugar is at least one selected from the group consisting of glucose, sucrose, fructose,

maltose, oligosaccharide, high-fructose corn syrup, lactose, psicose, allose, tagatose, and a combination thereof.

19. The method according to any one of Claims 12 to 18, wherein the high-intensity sweetener is at least one selected from the group consisting of rebaudioside M, rebaudioside D, a Luo han guo extract, mogroside V, and a combination thereof.

20. The method according to any one of Claims 12 to 19, wherein the sodium is at least one selected from the group consisting of sodium chloride, sodium hydroxide, sodium malate, sodium sulfate, sodium citrate, sodium phosphate, sodium carbonate, sodium disulfide, sodium bicarbonate, sodium alginate, sodium arginate, sodium glucoheptanoate, sodium gluconate, sodium glutamate, sodium tartrate, sodium aspartate, sodium lactate, sodium caseinate, sodium ascorbate, and a mixture thereof.

21. The method according to any one of Claims 12 to 20, wherein in the sparkling beverage, the sodium content is 10 to 35 mg/100 ml, energy is 50 Kcal/100 ml or less, and $X1 + X2$ is 6 or more.

22. A concentrate for providing the sparkling beverage according to Claim 1, comprising:

(a) a natural sugar in an amount corresponding to a sweetness intensity $X4$;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity $X5$; and

(c) 60 to 600 mg/100 ml of sodium,

wherein $(X4 + X5) \leq 200$ is satisfied.

23. A method for enhancing a sweetness of a sparkling beverage, comprising: containing

(a) a natural sugar in an amount corresponding to a sweetness intensity $X1$;

(b) a high-intensity sweetener in an amount corresponding to a sweetness intensity $X2$; and

(c) 6 to 60 mg/100 ml of sodium,
in the sparkling beverage.
