

ABSTRACT

Rescue System and Rescue Method, and Server Used for Rescue System and Rescue Method

5

A rescue system (10) includes: a plurality of movable bodies (100) each equipped with a camera (110); and a server (200) configured to communicate with the plurality of movable bodies (100). The rescue system identifies a protection target, based on information acquired by the camera (110). The server (200) is configured to

10 (a) define a search area to be searched for the protection target, (b) acquire positional information about the plurality of movable bodies (100) and select, from movable bodies located within the search area, at least one movable body to be used for searching for the protection target, the movable body being selected as a selected movable body, and (c) output, to the selected movable body (100), a search command

15 for searching for the protection target.
