

Abstract

Provided is an elevator guide device in which, in a method for fixing a guide shoe holder and a shoe, the shoe can be
5 fixed and replaced without using a tool. The elevator guide device includes: a guide shoe (2) sliding on a guide rail (6); a guide shoe holder (3) housing the guide shoe (2) and attaching to an elevating body; and a retainer (1) provided
10 between the guide shoe holder (3) and the guide shoe (2) to hold the guide shoe (2) to prevent the guide shoe (2) from getting out of a housing position in the guide shoe holder (3) and can release the guide shoe (2) by being pushed in one direction.
