

ABSTRACT

5 Provided are a method for transmitting an uplink signal, a terminal device and
a network side device. The method comprises: a terminal device receives first
information sent by a network side device, the first information being used for the
terminal device to determine a beam or beam group used for sending an uplink signal
to the network side device; according to the first information, the terminal device
10 determines a target beam or target beam group for sending the uplink signal; the
terminal device uses the target beam or target beam group to send the uplink signal to
the network side device. The present invention improves the uplink signal reception
performance of the network side device.
