

WIRELESS COMMUNICATION SYSTEM, WIRELESS
COMMUNICATION APPARATUS AND WIRELESS
COMMUNICATION METHOD AND COMPUTER PROGRAM

ABSTRACT OF THE DISCLOSURE

In order to solve problems arising when a communication system such as a wireless LAN is constructed as a decentralized distributed type network without a relationship of control station and controlled stations such as a master station and slave stations, in a wireless communication system composed of a plurality of communication stations without a relationship of control station and controlled stations, respective communication stations transmit beacons with information concerning a network written thereon with each other to construct the network, and it becomes possible to make sophisticated judgment such as communication states of other communication stations by those beacons.
