PHARMACEUTICAL COMPOSITION

ABSTRACT

Disclosed is a solid pharmaceutical composition containing a low-melting-point oil/fat-like substance, which is improved in drug eluting property and has excellent stability and dissolution property. Specifically, disclosed is a solid pharmaceutical composition comprising a pharmacologically active ingredient, a low-melting-point oil/fat-like substance and a low-viscosity binder. Also disclosed is a method for improving the elution of a pharmacologically active ingredient from a solid pharmaceutical composition comprising the pharmacologically active ingredient and a low-melting-point oil/fat-like substance, characterized by using a low-viscosity binder.
