

ABSTRACT

MULTI FUNCTION STICK-ON FOR FACE RESPIRATORY PIECES

5

An accessory in the form of a multi function stick-on for use with a face respiratory piece, the face respiratory piece having an interior surface in which the multi function stick-on is secured thereto, the interior surface of the face respiratory piece and a wearer's mouth forming a void, for the release of a
10 volatile substance for inhalation by the wearer.

The volatile substance which is a sublimable chemical, a biological agent, an antiseptic drug or a medicine for relief of a medical condition resides in a base of a different color from the volatile substance and is activated upon use. The
15 release of the volatile substance can be controlled by the user who would also know when the volatile substance is depleted.

The face respiratory piece could be a face mask, respiratory device or respiratory protective device.
