

ABSTRACT

There is provided a method for removing a lanthanum compound capable of selectively removing the lanthanum compound over a non-removal object. The method for removing a lanthanum compound includes: a removal step of removing, from an object to be treated having a lanthanum compound serving as a target to be removed and a non-removal object not serving as the target to be removed, the lanthanum compound by bringing a treatment liquid for lanthanum compound removal into contact with the object to be treated. The treatment liquid for lanthanum compound removal is an aqueous solution containing an α -hydroxycarboxylic acid salt and having a pH of 5 or more and 10 or less.
