

ABSTRACT

ROLL AND METHOD FOR PRODUCING ROLL

5 To provide a roll and a method for producing a roll,
which are capable of suppressing tunneling.

 A roll 100 includes a core 110 having a tubular shape
and a laminate 120 wound around the core. The laminate
includes a process film 125, a surface coat layer 124 formed
10 from a fluorine resin, a substrate layer 121, an adhesive
layer 122, and a release liner 123 formed from polyethylene
terephthalate (PET) in this order in a laminating direction.
The process film is formed from at least one selected from
the group consisting of polyethylene terephthalate (PET),
15 polyolefin, and polyvinyl chloride (PVC), and is thinner than
the release liner.
