(54) Title: INTERNET-BASED PROCESS OPTIMIZATION SYSTEM AND METHOD

(57) Abstract: A process optimization system and method uses a computer network, particularly the Internet, to standardize a process performed at a number of geographically separated locations while assuring optimal use of available process technology. The system includes at least one central server computer system and at least one client-user computer station at each location. Data relating to the process is inputted into the server computer system using any one of the client-user computer stations. The server computer system the uses the data to determine an optimal approach to the process and displays the optimal approach on the client-user computer station used to input the data.
