CIRCULAR RNAS FOR DIAGNOSIS OF DEPRESSION AND PREDICTION OF RESPONSE TO ANTIDEPRESSANT TREATMENT

Cross-Reference to Related Applications

This application claims the benefit of the filing date of U.S. Provisional Application No. 63/154,168, filed on February 26, 2021, the disclosure of which is incorporated by reference herein.

Sequence Listing

This application contains a Sequence Listing which has been submitted electronically in ASCII format and is hereby incorporated by reference in its entirety. Said ASCII copy, created on February 23, 2022, is named "CG-Sequence-1" and is 490 Kbytes in size.

Technical Field

The technology relates to the field of medical and therapeutic diagnostics, and in particular systems, methods, and compositions for the detection and treatment of psychiatric disorders using circular RNA biomarkers.

Background

Major Depressive Disorder (MDD; also known as "unipolar depression", "monopolar depression", or just "depression") is a psychiatric disorder that affects close to 10% of the world's population and is the second leading cause of disability and overall global disease burden worldwide. Although treatment with various antidepressants such as Selective Serotonin Reuptake Inhibitors (SSRIs), serotonin and norepinephrine reuptake inhibitors (SNRIs), Monoamine oxidase inhibitors (MAOIs), tricyclic antidepressants, and phycological therapy, such as cognitive behavioral therapy, has demonstrated clinical efficacy, the inherent complexity and heterogeneity of the disease and the "trial by error" approach in choosing the particular antidepressant treatment for each patient only allows for a subset of patients to respond to the first choice of treatment. As a result, the average percentage of patients with MDD that achieve response (more than 50% improvement of total score based on symptoms) or remission (elimination of depressive symptoms and a return to premorbid levels of functioning) to the first prescribed antidepressant treatment is around 30-50%. Furthermore, close to 30% of patients with MDD appear to be treatment-resistant in multiple antidepressant drug treatments. Lastly, a small subset of patients with depressive symptoms, initially diagnosed with MDD, end up being diagnosed with Bipolar Disorder (BD), thus making the differentiation between MDD and BD an important priority. It is therefore imperative to predict and monitor therapeutic efficacy and uncover better therapeutic alternatives for MDD. Moreover, the identification of early biomarkers for MDD severity can serve as a valuable tool in evaluating a patient's risk for complications and can help with excluding other differential diagnosis.

Existing RNA biomarker approaches are based on detecting linear RNA expression in adult peripheral samples such as blood. However, linear mRNAs are prone to degradation and most have very low half-lives (a few hours), thus making their expression unstable and transient,

especially in blood/serum samples, which contain high levels of enzymes that break down linear RNA.

Summary

To address the problems outlined above, the disclosure provides for the use of circular RNAs (circRNA) as biomarkers of psychiatric disorders, such as MDD, BD and the like. As described below, circRNA are produced from the backsplicing and covalent joining of exons and/or introns and are by far the most resistant to degradation RNA molecules with half-lives of several days to one week making them more suitable to use as diagnostic biomarkers.

In one embodiment, circRNAs can serve as robust biomarkers in blood and other peripheral samples, or cellular samples such as samples comprising neurons, based on a subset of specific circRNAs, e.g., either before treatment (baseline) or some weeks after treatment, that is significantly altered in the blood of patients with Major Depressive Disorder (MDD) or Bipolar Disorder (BD) and may be associated with response to specific antidepressant treatment. Moreover, a subset of circRNAs can predict MDD severity and can discriminate between MDD and BD. As a result, the disclosure provides for the use of circRNAs as a biomarker for diagnosis of MDD, response or remission to antidepressant treatment, as well as for predicting disease severity and the possibility for relapse. According to one embodiment. the present disclosure provides compositions, kits, assays, systems, and methods for the identification, diagnosis, screening, treatment and/or monitoring of brain disorders including, but not necessarily limited to, psychiatric disorders such as MDD and BD. According to a specific embodiment, the present disclosure provides a plurality of circRNAs biomarkers, the expression of which is indicative of such disorders or with response to various treatments, such as administration of one or more anti-depressants

With half-lives of several days, circRNAs can serve as robust biomarkers in blood and other peripheral samples. As disclosed herein, the expression of one or more circRNAs may be altered in the blood, or other fluid or tissue sample of a patient with a psychiatric disorder such as MDD or BD. The up or down-regulation of the expression of one or more of the circRNAs can be associated with response to an antidepressant treatment. Thus, circRNAs may be employed as a biomarker to identify a psychiatric disorder such as MDD or BD, and for response to antidepressant treatment as well as for predicting disease severity and the possibility for relapse. In particular, a relationship has been identified between circRNAs and diagnosis of MDD or BD and optionally response to antidepressant medication. The relationship found between circRNAs, MDD, BD, and response to treatment may allow for the use of those circRNAs as biomarkers to identify psychiatric disorders such as MDD or BD in patients during early stages of the disease, or before the onset of the disease, to follow therapeutic efficacy of antidepressants and/or design drug targets. Thus, the properties of the circRNAs not only allow for their use as robust peripheral biomarkers of MDD or BD, and/or disease severity, but also as strong predictors of response to treatment.

For example, detecting the presence or amount of one or more specific circRNAs allows for fast and accurate prediction of response to antidepressant mediations for MD, for a more accurate prediction of an individual's risk for developing serious MDD-related complications and/or chances for disease relapse, and/or for early diagnosis of MDD. Thus, according to an embodiment or aspect, the present disclosure provides compositions, kits, assays, systems, and methods for the identification, diagnosis, screening, treatment and/or monitoring of brain disorders including, but not necessarily limited to, MDD or BD. According to a specific embodiment, the present disclosure provides a plurality of circRNAs, the expression of which can be detected and correlated with, for example, responsiveness of a MDD patient to anti-depressant therapy, progression of MDD, and/or relapse of MDD.

In one example, the disclosure provides a composition comprising one or more isolated nucleic acids comprising a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof, a composition comprising two or more isolated nucleic acids comprising a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to a combination of two or more of SEQ ID Nos. 1-241, or the complement thereof, or a probe or primer that detects at least one of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or detects at least one of SEQ ID NO's. 1-241, or a plurality of probes that detect any combination of two or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, e.g., two or more probes that detect two or more of SEQ ID Nos. 1-241. In one embodiment, the probe has a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to the complement of one of SEQ ID Nos. 1-241.

Further provided is a panel of probes comprising probes specific for two or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69,or SEQ ID NOs. 1-241, or a plurality of primers specific for two or more of SEQ ID Nos. 1-241, wherein the probes or primers have a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to, or to the complement of, one of SEQ ID Nos. 1-241.

Also provided is an assay for detecting a mammal having or at risk of having MDD or BD comprising: one or more probes configured to identify the presence of at least one circRNA

selected from circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof. In one embodiment, the probes comprise a sequence specific for two or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241. In one embodiment, the probe comprises a sequence that spans the splice junction of the circRNA in an asymmetric manner. In one embodiment, the assay includes one or more primers configured to amplify a sequence specific for at least one of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof. In one embodiment, the primer includes a sequence that spans the splice junction of the circRNA in an asymmetric manner.

Further provided is a method for diagnosing MDD or BD in a mammal, such as a human, sometimes referred to as a subject or patient. The method includes providing or obtaining a test physiological sample from the mammal; assaying the test sample using probes and/or primers configured to identify the presence of and/or amplify one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241; and comparing the presence or amount of one or more of SEQ ID Nos. 1-241 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof, in the test sample to a control sample. In one embodiment, the sample is a physiological fluid sample. In one embodiment, the sample is a blood sample. In one embodiment, the mammal is a human suffering from, or at risk for developing a psychiatric condition, such as MDD or BD.

In one embodiment, a method to predict response or remission to an anti-depressant in a subject is provided. The method including providing or obtaining a test physiological sample from the subject; assaying the test sample using probes and/or primers configured to identify the presence of and/or amplify one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1,

circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241; and comparing the presence or amount of one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or SEQ ID NOs. 1-241 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof, in the test sample to a control sample. In one embodiment, the anti-depressant is useful to treat monopolar depression. In one embodiment, the sample is a physiological fluid sample. In one embodiment, the sample is a blood sample. In one embodiment, the subject is a human.

In one embodiment, a method to monitor progression of, or relapse of, MDD or BD in a subject is provided. The method includes providing or obtaining a test physiological sample from the subject; assaying the test sample using probes and/or primers configured to identify the presence of and/or amplify one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, e.g., identify or amplify SEQ ID Nos. 1-241 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity to one or more of SEQ ID Nos. 1-241, or the complement thereof; and comparing the presence or amount in the test sample to a sample from the mammal obtained at an earlier point in time. In one embodiment, the sample is a physiological fluid sample. In one embodiment, the sample is a blood sample. In one embodiment, the subject is a human.

Brief Description of the Drawings

Figures 1A-1B. Baseline blood PBMC circCDR1as vs circTULP4 ratio predicts remission after SSRI treatment (University of Marseille, France samples). (A) MDD patients that did not achieve remission after 30 weeks of treatment (MDD SSRI NR) display a higher baseline PBMC circCDR1as vs circTULP4 ratio ($p<0.001$, two-tailed one sample t-test, N=7 per group) than patients that achieved remission (MDD SSRI R). Data were acquired with circRNA-specific qRT-PCR in total RNA extracted from blood PBMCs (peripheral blood mononuclear cells) derived from the University of Marseille in France. (B) Differences in the PBMC circCDR1as vs circTULP4 ratio have an excellent predictive value for predicting remission after long-term SSRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.833 (more than 0.80 is considered excellent) and $p=0.0455$ ($p < 0.05$ is considered significant).

Figures 2A-2B. Blood circCDR1as vs circTULP4 ratio before treatment predicts response after 8 weeks of Sertraline treatment (EMBARC study, University of Texas Southwestern, whole blood). (A) Major Depressive Disorder (MDD) patients that did not respond to 8 weeks of Sertraline treatment (MDD Sert NR) display a higher blood circCDR1as vs circTULP4 ratio

($p<0.001$, two-tailed one sample t-test, N=12 per group) than patients that responded to treatment (MDD Sert R) at baseline. Data were acquired with circRNA-specific qRT-PCR in total RNA extracted from whole blood derived from the EMBARC study. (B) Differences in the circCDR1as vs circTULP4 ratio before treatment have a very good predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.7679 and $p=0.0206$ ($p < 0.05$ is considered significant).

Figure 3A-3C. CircRNA profiling reveals that circMIR5695 is a novel biomarker with excellent diagnostic abilities to predict remission to SSRI antidepressant treatment (PBMCs, France samples). (A-B) MDD patients that did not achieve remission after 30 weeks of treatment (SSRI NR) display higher baseline levels of circMIR5695 (A) than patients that achieved remission (SSRI R). These differences between those two groups are erased following 8 weeks as SSRI R circMIR5695 levels increase significantly relative to baseline, thus following the initial improvements in disease severity (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****$p<0.0001$, ***$p<0.001$, **$p<0.01$, *$p<0.05$, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circMIR5695 levels have an outstanding predictive value for predicting remission after long-term SSRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 (100% specificity and sensitivity) and $p=0.0027$ ($p < 0.05$ is considered significant).

Figures 4A-4C. CircRNA profiling reveals that circRERE is a novel biomarker with excellent diagnostic abilities to predict remission to SNRI treatment (France samples). (A-B) MDD patients that achieved remission after 30 weeks of treatment with SNRIs (SNRI R) displayed higher baseline levels of circRERE (A) than patients that did not achieve remission (SNRI NR). These differences between those two groups are erased following 8 weeks as SNRI treatment as circRERE levels increase significantly relative to baseline in SNRI NR (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****$p<0.0001$, ***$p<0.001$, **$p<0.01$, *$p<0.05$, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circRERE levels have an outstanding predictive value for predicting remission after long-term SNRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9722 and $p=0.0065$.

Figures 5A-5D. CircRNA profiling reveals that circCHIC1 is a novel biomarker with excellent diagnostic abilities to predict remission to both SSRI and SNRI treatment (France samples). (A-B) MDD patients that achieved remission after 30 weeks of treatment with SNRIs (SNRI R) or SSRIs (SSRI R) displayed higher baseline levels of circCHIC1 in PBMCs (A) than

patients that did not achieve remission to either category of antidepressant (SNRI NR and SSRI NR). These differences between those two groups are erased following 8 weeks of treatment as circCHIC1 are similar between R and NR groups for both SSRIs and SNRIs (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, ***p<0.001, **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circCHIC1 levels have an outstanding predictive value for predicting remission both after long-term SNRI and SSRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.0000 for both groups and p=0.0027 (SSRI) or p=0.0039 (SNRI).

Figures 6A-6D. CircRNA profiling reveals that circCOMT is a novel biomarker with excellent diagnostic abilities to predict remission to both SSRI and SNRI treatment (France samples). (A-B) MDD patients that achieved remission after 30 weeks of treatment with SNRIs (SNRI R) or SSRIs (SSRI R) displayed higher baseline levels of circCOMT in PBMCs (A) than patients that did not achieve remission to either category of antidepressant (SNRI NR and SSRI NR). These differences between those two groups are erased following 8 weeks of treatment as circCOMT are similar between R and NR groups for both SSRIs and SNRIs (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ***p<0.001, **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circCOMT levels have an outstanding predictive value for predicting remission both after long-term SNRI and SSRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.0000 with p=0.0027 (SSRI) and 0.8611 with p=0.0374 (SNRI).

Figures 7A-7D. Levels of circRALGAPB in blood PBMCs predict remission to SSRIs before treatment and distinguish those treated with SSRIs vs SNRIs 8 weeks after treatment. (A-B) MDD patients that achieved remission after 30 weeks of treatment with SSRIs (SSRI R) displayed higher baseline levels of circCOMT in PBMCs (A) than patients that did not achieve remission after treatment (SSRI NR). These differences between those two groups are erased following 8 weeks of treatment as circCOMT are similar between SSRI R and NR groups (B). Moreover, after 8 weeks of treatment SSRI-treated patient samples exhibit higher circCOMT levels than SNRI-treated samples regardless of remission (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, ***p<0.001, **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circCOMT levels have an outstanding predictive value for predicting remission after long-term SSRI treatment and for predicting whether patients were treated with SNRIs or SSRIs 8 weeks after

treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9048 with p=0.0152 (SSRI R vs NR) and 1.000 with p<0.0001 (SSRI 8 week vs SNRI 8 week).

Figure 8A-8D. CircRNA profiling reveals that circDDX50 is a novel biomarker with excellent diagnostic abilities to predict remission to both SSRI and SNRI treatment (France samples). (A-B) MDD patients that achieved remission after 30 weeks of treatment with SNRIs (SNRI R) or SSRIs (SSRI R) displayed higher baseline levels of circDDX50 in PBMCs (A) than patients that did not achieve remission to either category of antidepressant (SNRI NR and SSRI NR). These differences between those two groups are erased following 8 weeks of treatment as circDDX50 are similar between R and NR groups for both SSRIs and SNRIs (B). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ***p<0.001, **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (C) Differences in baseline circDDX50 levels have an outstanding predictive value for predicting remission after long-term SSRI and SNRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 (100% specificity and sensitivity) and p=0.0027 for SSRI R vs SSRI NR and 0.9722 and p=0.0065 for SNRI R vs SNRI NR.

Figures 9A-9B. CircRNA profiling reveals that circPICALM is a novel biomarker with excellent diagnostic abilities to predict remission to SNRI treatment (France samples). (A-B) MDD patients that achieved remission after 30 weeks of treatment with SNRIs (SNRI R) displayed lower baseline levels of circPICALM levels (A) than patients that did not achieve remission (SNRI NR). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circPICALM levels have an outstanding predictive value for predicting remission after long-term SNRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9167 and p=0.0163.

Figures 10A-10B. Baseline SSRI remission prediction based on the ratio between circMIR5695 and circCHIC1. (A) Patients with MDD that do not achieve remission 30 weeks after SSRI treatment (SSRI NR) exhibit increased circMIR5695 vs circCHIC1 ratio at baseline (before treatment). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circMIR5695 vs circCHIC1 ratio have an outstanding predictive value for predicting remission after long-term SSRI treatment based on receiver operating characteristic

curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9910 and p=0.0001.

Fig. 11. SSRI remission prediction 8 weeks after treatment based on the ratio between circMIR5695 and circCHIC1. (A) Patients with MDD that do not achieve remission 30 weeks after SSRI treatment (SSRI NR) still exhibit increased circMIR5695 vs circCHIC1 ratio 8 weeks after treatment. Moreover, patients with MDD that achieve remission after 30 weeks of treatment (SSRI R) increase the baseline circMIR5695 vs circCHIC1 ratio after 8 weeks of treatment. Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. An explanation of the algorithm based on figures 10 and 11 is shown on the right of the figure.

Figures 12A-12B. Baseline SSRI remission prediction based on the ratio between circRALGAPB and circCHIC1. (A) Patients with MDD that do not achieve remission 30 weeks after SSRI treatment (SSRI NR) exhibit increased circRALGAPB vs circCHIC1 ratio at baseline (before treatment). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circRALGAPB vs circCHIC1 ratio have an outstanding predictive value for predicting remission after long-term SSRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9861 and p=0.0002.

Figures 13A-13B. Baseline SNRI remission prediction based on the ratio between circCHIC1 and circPICALM. (A) Patients with MDD that achieve remission 30 weeks after SNRI treatment (SNRI R) exhibit increased circCHIC1 vs circPICALM ratio at baseline (before treatment). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, ***p<0.001, **<p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circCHIC1 vs circPICALM ratio have an outstanding predictive value for predicting remission after long-term SNRI treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9722 and p=0.0004.

Figure 14. SNRI remission prediction 8 weeks after treatment based on the ratio between circCHIC1 and circPICALM. (A) Patients with MDD that do not achieve remission 30 weeks after SNRI treatment (SNRI NR) still exhibit reduced circCHIC1 vs circPICALM ratio 8 weeks after treatment. Moreover, patients with MDD that achieve remission after 30 weeks of treatment (SNRI R) decrease the baseline circCHIC1 vs circPICALM ratio after 8 weeks of treatment. Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, ***p<0.001, **p<0.01,

based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. An explanation of the algorithm based on figures 13 and 12 is shown on the right of the figure.

Figures 15A-15D. Levels of circTULP4 and circSATB2 are significantly elevated in BDD patients 8 weeks after treatment. (A) Patients with depressive symptoms that were originally misdiagnosed with MDD but were later shown to suffer from BD show significantly elevated circTULP4B levels 8 weeks after treatment (regardless of type of treatment). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circTULP4 levels have an outstanding predictive value for predicting BDD diagnosis based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p=0.0003. (C) Patients with depressive symptoms that were originally misdiagnosed with MDD but were later shown to suffer from BD show significantly elevated circSATB2 levels 8 weeks after treatment (regardless of type of treatment). Data were acquired with circRNA array profiling in total RNA extracted from blood PBMCs derived from the University of Marseille in France. ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=5-7 per group. (B) Differences in baseline circSATB2 levels have an outstanding predictive value for predicting BDD diagnosis based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p=0.0003.

Figures 16A-16C. Sertraline response prediction based on circDDR1. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circDDR1 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circDDR1 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9022 and p=0.0002. (C) Comparison of whole blood circDDR1 expression after 1 week of treatment vs baseline in MDD patients that either achieved reponse (Sert R) or not (SERT NR) to Sertraline and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for all SERT groups and N= 8 for Control.

Figures 17A-17C. Sertraline response prediction based on circICAM1. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circICAM1 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circICAM1 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001. (C) Comparison of whole blood circICAM1 expression after 1 week of treatment vs baseline in MDD patients that either achieved reponse (Sert R) or not (SERT NR) to Sertraline and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, ***p<0.001**p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for all SERT groups and N= 8 for Control.

Figures 18A-18D. Sertraline response prediction based on circMIR5695. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circMIR5695 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circMIR5695 levels have an very good predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.7667 and p=0.0128. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circMIR5695 levels one week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (D) Differences in circMIR5695 levels 1 week after treatment have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8978 and p=0.0002.

Figures 19A-19D. Sertraline response prediction based on circRALGAPB. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circRALGAPB levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circRALGAPB levels have a very good predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.7689 and p=0.0121. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circRALGAPB levels one week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). **p<0.01, ***p<0.001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (D) Differences in circRALGAPB levels 1 week after treatment have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8889 and p=0.0003.

Figures 20A-20D. Sertraline response prediction based on circDUSP22 or circFKBP8. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circDUSP22 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circDUSP22 levels have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8578 and p=0.0008. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circFKBP8 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ***p<0.001, **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (D) Differences in baseline

circFKBP8 levels have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8400 and p=0.0015.

Figures 21A-21F. Sertraline response prediction based on circDLG5, circMYO9B, or circADAM22. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circDLG5 levels 1 week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR), unaffected Controls (Control), or patients with MDD that were given Placebo and did not respond to treatment (Placb). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ***p<0.001, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control and Placb. (B) Differences in circDLG5 levels 1 week after treatment have a very good predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8267 and p=0.0095. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circMYO9B levels 1 week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR), unaffected Controls (Control), or patients with MDD that were given Placebo and did not respond to treatment (Placb). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, ***p<0.001, **p<0.01, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control and Placb. (D) Differences in circMYO9B levels 1 week after treatment have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8267 and p=0.0023. (E) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circADAM22 levels 1 week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR), unaffected Controls (Control), or patients with MDD that were given Placebo and did not respond to treatment (Placb). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, ***p<0.001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control and Placb. (F) Differences in circADAM22 levels 1 week after treatment have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that

illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8800 and p=0.0004.

Figures 22A-22D. Sertraline response prediction based on circNFATC3. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circNFATC3 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circNFATC3, levels have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8800 and p=0.0004. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circNFATC3 levels one week after treatment compared to MDD patients that did not achieve response to Sertraline (SERT NR), unaffected Controls (Control), and patients with MDD that were given Placebo and did not respond to treatment (Placb). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ***p<0.001, *p<0.05, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control and Placb. (D) Differences in circNFATC3 levels 1 week after treatment have a very good predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.7687 and p=0.0075.

Figures 23A-23D. Sertraline response prediction based on circHMGA2 or circMALAT1. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit decreased circHMGA2 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circHMGA2 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit increased circMALAT1 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array

profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ***p<0.001, **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (D) Differences in baseline circMALAT1 levels have an excellent predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.8533 and p=0.0010.

Figures 24A-24F. Sertraline response prediction based on circVDAC2, circTRIM69, or circCYP24A1. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit decreased circVDAC2 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circVDAC2 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 0.9956 and p<0.0001. (C) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit decreased circTRIM69 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (D) Differences in baseline circTRIM69 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001. (E) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit decreased circCYP24A1 levels at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, **p<0.01, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (F) Differences in baseline circCYP24A1 levels have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001.

Figures 25A-25B. Sertraline response prediction based on the ratio of circICAM1 vs circHMGA2. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit an increased circICAM1 vs circHMGA2 ratio at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circICAM1 vs circHMGA2 ratio have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001.

Figures 26A-26B. Sertraline response prediction based on the ratio of circICAM1 vs circHMGA2. (A) Patients with MDD that achieved response after 8 weeks of Sertraline treatment (Sert R) exhibit an increased circICAM1 vs circVDAC2 ratio at baseline (before treatment) compared to MDD patients that did not achieve response to Sertraline (SERT NR) and unaffected Controls (Control). Data were acquired with circRNA array profiling in total RNA extracted from whool blood derived from the University of Texas Southwestern (EMBARC study). ****p<0.0001, based on ANOVA with Tukey's post-hoc corrections for multiple comparisons, N=15 for SERT R and SERT NR and N= 8 for Control. (B) Differences in baseline circICAM1 vs circVDAC2 ratio have an outstanding predictive value for predicting response after 8 weeks of Sertraline treatment based on receiver operating characteristic curve (ROC curve; a graphical plot that illustrates the diagnostic ability of a binary classifier system). Area under the curve = 1.000 and p<0.0001.

Figure 27. Backspliced junction sequences for selected circRNAs. Graph showing the sequences of the unique circRNA backspliced junction for an exemplary number of species of selected circRNAs (SEQ ID NO's 242-287) PCR primers are designed to span these backspliced circRNA junction sequences.

Figure 28. Exemplary number of species of selected circRNA-specific PCR primers for top circRNA candidates. Graph showing primer pair for PCR-based detection of selected circRNAs (SEQ ID NO's 288-433).

Detailed Description

According to an embodiment the present disclosure provides compositions, kits, assays, systems, and methods for the identification, diagnosis, screening, treatment and/or monitoring of brain disorders including, but not necessarily limited to, psychiatric disorders, such as Major Depressive Disorder (MDD) and Bipolar Disorder (BD). For the purposes of the present disclosure the term "Major Depressive Disorder (s)" or "MDD" is a term that describes a psychiatric disease also known as "unipolar depression", "monopolar depression", or just

"depression" and includes all subtypes and classifications of such illness. The term "Bipolar Disorder" or "BD" is a term for the spectrum of psychiatric disorders formerly called manic-depressive illness or manic depression and includes all subtypes and classifications of such illness, including Bipolar Disorder type I, Bipolar disorder type II, and Cyclothymic Disorder (also called Cyclothymia). The term antidepressant treatment is a broad term that encompasses all drugs used for treatment of MDD, including but not limited to Selective Serotonin Reuptake Inhibitors (SSRIs), serotonin and norepinephrine reuptake inhibitors (SNRIs), Monoamine oxidase inhibitors (MAOIs), tricyclic antidepressants, and other atypical antidepressants.

According to a specific embodiment, the present disclosure provides a plurality of circular RNAs (circRNAs) the expression of which is correlated with MDD diagnosis or severity, or response or remission to specific antidepressant treatment. CircRNAs are a category of long non-coding RNAs (ncRNAs) that are derived from the circularization and covalent joining of backspliced exons and/or introns. CircRNAs are particularly enriched in the mammalian brain (at least 100,000 different circRNAs have been identified in the human brain), yet, with few exceptions, lack the capacity of being translated into protein. Some circRNAs are known to sequester microRNAs (miRNAs) by containing partial complementary sequences and others to associate with RNA-binding proteins (RBPs) and transcription factors. Recent work has suggested that circRNAs could be altered in neurological and psychiatric disorders and that they could be responsible for regulating brain development, maturation, plasticity, and aging. Due to their closed loop structure, circRNAs are particularly resistant to degradation thus exhibit very high stability, with half-lives ranging from a few days to a week. This unparallel stability allows circRNAs to accumulate in various tissues and bodily fluids, whereas their tissue- and disease state- specificity allows them to serve as ideal biomarkers.

Tables 1-9 provide the specific circRNAs which showed significantly altered expression based on circRNA array profiling in the blood of individuals diagnosed with MDD that were found to exhibit remission to different antidepressant treatments vs patients with MDD that did not achieve remission after antidepressant treatment or circRNAs that show altered expression 8 weeks after treatment vs baseline (before treatment). For the purposes of the present disclosure, the circRNAs provided in Tables 1-9 are collectively referred to herein as "MDD-treatment predictive circRNAs".

Specifically, Table 1 provides circRNAs which showed significantly altered expression at baseline (before onset of treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that achieved remission after 30 weeks of SSRI treatment (SSRI-R baseline) vs patients with MDD that did not achieve remission after 30 weeks of SSRI treatment (SSRI-NR baseline).

Table 2 provides circRNAs which showed significantly altered expression 8 weeks after treatment in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with

MDD that achieved remission after 30 weeks of SSRI treatment (SSRI-R 8 week) vs patients with MDD that did not achieve remission after 30 weeks of SSRI treatment (SSRI-NR 8 week).

Table 3 provides circRNAs which showed significantly altered expression at baseline (before onset of treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that achieved remission after 30 weeks of SNRI treatment (SNRI-R baseline) vs patients with MD D that did not achieve remission after 30 weeks of SSRI treatment (SNRI-NR baseline).

Table 4 provides circRNAs which showed significantly altered expression 8 weeks after treatment in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that achieved remission after 30 weeks of SNRI treatment (SNRI-R 8 week) vs patients with MDD that did not achieve remission after 30 weeks of SSRI treatment (SNRI-NR 8week).

Table 5 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that achieved remission after 30 weeks of SSRI treatment (SSRI-R 8week vs SSRI-R baseline).

Table 6 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that did not achieve remission after 30 weeks of SSRI treatment (SSRI-NR 8week vs SSRI-NR baseline).

Table 7 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that achieved remission after 30 weeks of SNRI treatment (SNRI-R 8week vs SNRI-R baseline).

Table 8 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD that did not achieve remission after 30 weeks of SNRI treatment (SNRI-NR 8week vs SNRI-NR baseline).

Table 9 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD who achieved remission after 30 weeks of MAOI treatment (MAOI-R 8week vs MAOI-R baseline). For the purposes of the present disclosure, the term "significantly altered expression" means that the expression of a circRNA in patient samples is significantly lower or higher between two groups of compared samples via two-tailed Student's t-test with $p<0.05$ as a cutoff p-value for statistical significance and a fold change of more 1.5-fold (either reduction or increase).

Tables 10-14 provide the specific circRNAs which showed significantly altered expression based on circRNA array profiling in the blood of individuals diagnosed with either MDD or BD vs unaffected controls or circRNAs that show altered expression 8 weeks after

treatment vs baseline (before treatment) in either patients with MDD or BD, or controls. For the purposes of the present disclosure, the circRNAs provided in Tables 10-14 are collectively referred to herein as "MDD and BD diagnosis-related circRNAs".

Specifically, Table 10 provides circRNAs which showed significantly altered expression at baseline (before onset of treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD (MDD baseline) vs controls (Control Baseline).

Table 11 provides circRNAs which showed significantly altered expression 8 weeks after treatment in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with MDD (MDD 8 week) vs controls (Control 8 week).

Table 12 provides circRNAs which showed significantly altered expression at baseline (before onset of treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with BD (BD baseline) vs controls (Control Baseline).

Table 13 provides circRNAs which showed significantly altered expression 8 weeks after treatment in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with BD (BD 8 week) vs controls (Control 8 week).

Table 14 provides circRNAs which showed significantly altered expression 8 weeks after treatment vs baseline (before treatment) in peripheral blood mononuclear cells (PBMCs) derived from the blood of patients with BD (BD 8week vs BD baseline). For the purposes of the present disclosure, the term "significantly altered expression" means that the expression of a circRNA in patient samples is significantly lower or higher between two groups of compared samples via two-tailed Student's t-test with $p<0.05$ as a cutoff p-value for statistical significance and a fold change of more 1.5-fold (either reduction or increase).

Tables 15-18 provide the specific circRNAs which showed significantly altered expression based on circRNA array profiling in whole blood of individuals diagnosed MDD that were treated with Sertraline for 8 weeks and either responded (Sert R) or did not respond to treatment (Sert NR). For the purposes of the present disclosure, the circRNAs provided in Tables 15-18 are collectively referred to herein as "Sertraline treatment-related circRNAs".

Specifically, Table 15 provides circRNAs which showed significantly altered expression at baseline (before onset of treatment) in whole blood of individuals diagnosed MDD that were treated with Sertraline for 8 weeks and either responded (Sert R) or did not respond to treatment (Sert NR).

Table 16 provides circRNAs which showed significantly altered expression 1 week after treatment in whole blood of individuals diagnosed MDD that were treated with Sertraline for 8 weeks and either responded (Sert R) or did not respond to treatment (Sert NR).

Table 17 provides circRNAs which showed significantly altered expression 1 week after treatment in whole blood of individuals diagnosed MDD that were treated with Sertraline for 8 weeks and responded (Sert R)vs baseline expression in the same patients (Sert R 1 week vs Sert R baseline).

Table 18 provides circRNAs which showed significantly altered expression 1 week after treatment in whole blood of individuals diagnosed MDD that were treated with Sertraline for 8 weeks and did not respond (Sert NR) vs baseline expression in the same patients (Sert NR 1 week vs Sert NR baseline).

Each of the 18 Tables includes the unique transcript start and end chromosomal coordinates (tx Start and tx End), the chromosome (Chr) number and strand, the circRNA type, the circRNA alias based on circBase (http://circbase.mdc-berlin.de) or other circRNA databases the relative to Control fold change and uncorrected p-value, and the host gene symbol for significantly altered circRNAs ($p < .05$, two-tailed Students t-test)." All circRNA array experiments used for Tables 1-16 were performed by employing a commercially available circRNA microarray platform that uses 13,617 circRNA splice junction probes designed based on previous RNA sequencing and circRNA annotation data (Service sold by Arraystar Inc.). Additional methods for identifying these brain disorder-associated circRNA biomarkers are discussed in the Experimental section below.

Given that harsh RNaseR treatment can partially digest some circRNAs together with all linear RNAs, thus making circRNA screening semi-quantitative and given the high cost of such screening methods, the present disclosure also provides novel validated and sequence-verified circRNA-specific qRT-PCR primers aimed at the unique circRNA-specific splice junction, which enable the measurement of a subset of dysregulated circRNAs in non RNaseR-treated samples. The sequences of the backspliced junctions of a few selected circRNAs are shown in Fig. 16. PCR primers are designed so as to span the unique circRNA backspliced junctions, so that they specifically detect the circRNA of interest and not other linear or circular isoforms derived from the same gene.

According to a specific embodiment, the present disclosure provides circCDR1as (also known as CDR1as; circRNA alias via circbase and circinteractome databases: hsa_circ_0001946; see also Figure 16) and circTULP4 (also known as circTCONS_00011401; circRNA alias via circbase and circinteractome databases: hsa_circ_0131196; see also Figure 16) as biomarkers predicting response or remission to SSRI treatment in either whole blood (Fig. 1) or PBMCs or other blood-derived samples from patients with MDD (Fig. 2), as well as other biological fluids including saliva and urine, either before treatment (baseline), or after the start of antidepressant treatment. The backspliced junction sequence used for the detection of human circCDR1as and circTULP4 are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. These two circRNAs could be used alone or in conjunction with each other to predict response or remission of MDD patients to SSRI treatment.

According to a specific embodiment, the present disclosure provides that circTIAM1 (hsa_circ_0115791), circCHIC1 (hsa_circ_0091072), circSYNGR2 (hsa_circ_0045871), circSLC41A2 (hsa_circ_0027966), circCOL12A1(hsa_circ_0077032), circCOBL (hsa_circ_0080217), circHERC2 (hsa_circ_0005387), circICT1 (hsa_circ_0045581), circDDX50

(hsa_circ_0007097), circARHGEF10L (hsa_circ_0010210), circCOMT (hsa_circ_0062277), circWSB1 (hsa_circ_0042488), circKIAA1429 (hsa_circ_0084904), circNBAS (hsa_circ_0052712), circPDXDC1 (hsa_circ_0038011), circBPNT1 (hsa_circ_0000185), circMIR5695 (hsa_circ_0130587), circGRIP1 (hsa_circ_0099053), circNUP88 (hsa_circ_0041694), circEPHB4 (hsa_circ_0001730), circSETBP1 (hsa_circ_0006491), circHDHD2 (hsa_circ_0108522), circSIN3A (hsa_circ_0000636), circPPP6R1 (hsa_circ_0000959), circPDE5A (hsa_circ_0002474), circPDE5A (hsa_circ_0070805), circAHSA1 (hsa_circ_0032777), circLTBP1 (hsa_circ_0053907), circDAAM1 (hsa_circ_0000543), circPICALM (hsa_circ_0003695), circLRBA (hsa_circ_0071210), circCHD1L (hsa_circ_0013953), circTTC27 (hsa_circ_0003195), circLIMS1 (hsa_circ_0008348), circPIK3C2B (hsa_circ_0111746), circNRIP1 (hsa_circ_0004771), circLSM14A (hsa_circ_0008030), circPIP4K2A (hsa_circ_0017972), and circMBNL1 (hsa_circ_0001348) (see also Fig. 27-28), or any of the significantly altered circRNAs between SSRI R (those that achieved response or remission to SSRIs) and SSRI NR (those that did not achieve response or remission to SSRIs) shown in Table 1 (baseline) and Table 2 (8 weeks after treatment) and included in sequences 1-241, or circRNAs altered after SSRI treatment vs baseline in SSRI R patients (Table 5; SSRI R 8 week vs SSRI R baseline), or SSRI NR patients (Table 6; SSRI NR 8 week vs SSRI NR baseline) and included in sequences 1-241 (selected Table 5-6 circRNAs are: circMIR5695 (hsa_circ_0130587), circDNMBP (hsa_circ_0092382), circSTX1A (hsa_circ_0009012), circUSHBP1 (hsa_circ_0049965), circTMEM245 (hsa_circ_0087903), circGREB1L (hsa_circ_0003653), circROBO2 (hsa_circ_0066556), circHIVEP2 (hsa_circ_0007021), circIARS (hsa_circ_0087497), circFOXO3 (hsa_circ_0006404), circANXA8 (hsa_circ_0018309), circATIC (hsa_circ_0058058), circENC1 (hsa_circ_0073009), circPTK2 (hsa_circ_0005273), circWSB1 (hsa_circ_0042488), circITGAV hsa_circ_0057319), circATF6 (hsa_circ_0008857), circABL1 (hsa_circ_0089131), circAMBRA1 (hsa_circ_0009155), circRANGAP1 (hsa_circ_0063526), circSELL (hsa_circ_0000157) and circZC3H6 (hsa_circ_0001062), as biomarkers predicting response or remission to SSRI treatment in either whole blood or PBMCs or other blood-derived samples from patients with MDD, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 1, 2, 5, and 6 could be used alone or in conjunction with each other to predict response or remission of MDD patients to SSRI treatment.

According to a specific embodiment, the present disclosure provides that circRERE (hsa_circ_0009574), circTOX2 (hsa_circ_0001160), circZFHX4 (hsa_circ_0084789), circHEATR5A (hsa_circ_0031570), circITGAV (hsa_circ_0057319), circGRIP1 (hsa_circ_0099053), circPPP2CA (hsa_circ_0073942), circDDX50 (hsa_circ_0007097),

circYTHDF1 (hsa_circ_0004858), circRERE (hsa_circ_0009581), hsa_circ_0001655 (no name; only circRNA alias available), circNBEA (hsa_circ_0029975), circFLNC (hsa_circ_0082218), circRNF167 (hsa_circ_0041623), circICT1 (hsa_circ_0045581), circPTPRM (hsa_circ_0008584), circXBP1 (hsa_circ_0001216), circGSTP1 (hsa_circ_0023115), circANAPC7 (hsa_circ_0028198), circLDHB (hsa_circ_0025597), circZFC3H1 (hsa_circ_0008912), circVRK2 (hsa_circ_0120478), circDENND4A (hsa_circ_0035957), and circPIK3C3 (hsa_circ_0007765), or any of the significantly altered circRNAs between SNRI R (those that achieved response or remission to SNRIs) and SNRI NR (those that did not achieve response or remission to SNRIs) shown in Table 3 (baseline) and Table 4 (8 weeks after treatment) and included in sequences 1-241, or circRNAs altered after SNRI treatment vs baseline in SNRI R patients (Table 7; SNRI R 8 week vs SNRI R baseline), or SSRI NR patients (Table 8; SNRI NR 8 week vs SNRI NR baseline) and included in sequences 1-241 (selected Table 5-6 circRNAs are: circSAP130 (hsa_circ_0056390), circNFAM1 (hsa_circ_0001240), circTMEM245 (hsa_circ_0087903), circHBA2 (hsa_circ_0037139), circGREB1L (hsa_circ_0003653), circGPD1L (hsa_circ_0123503), circDHX33 (hsa_circ_0000740), circITGAV (hsa_circ_0057319), circRERE (hsa_circ_0009574), circRNF167 (hsa_circ_0041623), circIRAK1BP1 (hsa_circ_0077109), circC4orf27 (hsa_circ_0071439), circDDX50 (hsa_circ_0007097), circSTX1A (hsa_circ_0009012), circRFC5 (hsa_circ_0028628), circC20orf24 (hsa_circ_0001151), circANXA8 (hsa_circ_0018309), circBPNT1 (hsa_circ_0000185), circTMEM245 (hsa_circ_0087888), circARHGEF10L (hsa_circ_0010210), circWSB1 (hsa_circ_0042488), and circNR6A1 (hsa_circ_0088511)), as biomarkers predicting response or remission to SSRI treatment in either whole blood or PBMCs or other blood-derived samples from patients with MDD, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 3, 4, 7, and 8 could be used alone or in conjunction with each other to predict response or remission of MDD patients to SNRI treatment.

According to a specific embodiment, the present disclosure provides that any of the significantly altered circRNAs before and after treatment with MAOIs in MAOI R (those that achieved response or remission to MAOIs) shown in Table 9 (MAOI R 8 week vs MAOI R baseline), such as circFCHO2 (hsa_circ_0072954), circDENND4A (hsa_circ_0035944), circSLC38A1 (hsa_circ_0098630), circEPB41 (hsa_circ_0000041), circPTK2 (hsa_circ_0008305), circNAA40 (hsa_circ_0022623), circREPS1 (hsa_circ_0005210), circCAMKMT (hsa_circ_0006530), circKIAA1586 (hsa_circ_0131987), circMYBL1 (hsa_circ_0084642), circMPHOSPH9 (hsa_circ_0006615), circTBC1D31 (hsa_circ_0001820), circSLC39A10 (hsa_circ_0057551), circRERE (hsa_circ_0009581), circSLC38A2

(hsa_circ_0025984), circSBDSP1 (hsa_circ_0006688), circPTDSS1 (hsa_circ_0001816), circFANCL (hsa_circ_0001009), circCCT3 (hsa_circ_0014724), and circBRE (hsa_circ_0053317), as biomarkers predicting response or remission to MAOI treatment in either whole blood or PBMCs or other blood-derived samples from patients with MDD, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant treatment. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Table 9 and shown in sequences 1-241 could be used alone or in conjunction with each other to predict response or remission of MDD patients to MAOI treatment.

According to a specific embodiment, the present disclosure provides that any of the significantly altered circRNAs between patients with MDD and Controls shown in Table 10 (baseline MDD vs baseline Controls) and Table 11 (8 weeks after treatment MDD vs Control 8 weeks after first visit), such as circRALGAPB (hsa_circ_0060342), circTBC1D14 (hsa_circ_0003201), circMASTL (hsa_circ_0018031), circEXOC4 (hsa_circ_0082440), circHNRNPA1 (hsa_circ_0026700), circSTRN (hsa_circ_0054033), circWDFY1 (hsa_circ_0001101), circNHP2L1 (hsa_circ_0063598), circITGB7 (hsa_circ_0026568), circSELL (hsa_circ_0000157), circSUSD1 (hsa_circ_0088059), circFBN3 (hsa_circ_0092332), circLARS (hsa_circ_0074407), circTRIP13 (hsa_circ_0071681), circDAGLB (hsa_circ_0006093), circDPH7 (hsa_circ_0006502), circPRELID2 (hsa_circ_0008132), circDAGLB (hsa_circ_0002067), circMIR5695 (hsa_circ_0130587), circUBA2 (hsa_circ_0050547), circS100PBP (hsa_circ_0011451), circITGAV (hsa_circ_0057319), circSAMD8 (hsa_circ_0018905), circNRIP1 (hsa_circ_0061276), circAKAP17A (hsa_circ_0007352), circTBC1D14 (hsa_circ_0003201), circHNRNPA1 (hsa_circ_0026700), circSYNGR2 (hsa_circ_0045871), circRALGAPB (hsa_circ_0060342), circSAMD8 (hsa_circ_0006148), circDNMBP (hsa_circ_0092382), circCWC27 (hsa_circ_0072654), circCORO1C (hsa_circ_0028067), circMTHFD2L (hsa_circ_0069977), circPLEKHG1 (hsa_circ_0078264), circARMC9 (hsa_circ_0058651), circN4BP2L2 (hsa_circ_0029934), and circPNN (hsa_circ_0101802), as biomarkers facilitating the diagnosis of BDD in either whole blood or PBMCs or other blood-derived samples, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant or other form of psychiatric treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 10 and 11 and shown in sequences 1-241 could be used alone or in conjunction with each other to diagnose MDD in patients with or without depressive symptoms.

According to a specific embodiment, the present disclosure provides that circSRGN (hsa_circ_0018594), circTM2D3 (hsa_circ_0003813), circAGFG1 (hsa_circ_0058514), circDCP2 (hsa_circ_0001520), circAGFG1 (hsa_circ_0058520), circRFWD2

(hsa_circ_0015364), circMED13L (hsa_circ_0000443), circDCP2 (hsa_circ_0073608), circRNF149 (hsa_circ_0001058), circSCMH1 (hsa_circ_0005303), circDICER1 (hsa_circ_0000564), circEYA3 (hsa_circ_0008057), circPAPPA2 (hsa_circ_0015382), circKPNB1 (hsa_circ_0044301), circTLE1 (hsa_circ_0087331), circMTMR3 (hsa_circ_0001219), circMED13L (hsa_circ_0000442), circHLHL2 (hsa_circ_0071375), circKCNH1 (hsa_circ_0016348), circPICALM (hsa_circ_0023928), circSATB2 (hsa_circ_0003915), circHTRA1 (hsa_circ_0020275), circSATB2 (hsa_circ_0007422), circCAPZA1 (hsa_circ_0013526), circKLHL8 (hsa_circ_0127236), circCASC15 (hsa_circ_0075826), circSIDT2 (hsa_circ_0024379), circFBXO24 (hsa_circ_0081481), circTULP4 (hsa_circ_0131196), circHELZ2 (hsa_circ_0001176), circNPRL3 (hsa_circ_0037127), circTUBA8 (hsa_circ_0062191), circKRT8 (hsa_circ_0026467), circMETTL15 (hsa_circ_0000282), circGSE1 (hsa_circ_0040726), circFARS2 (hsa_circ_0075533), circPIGU (hsa_circ_0001142), circCHEK2 (hsa_circ_0004128), circEPB41L5 (hsa_circ_0056264), circALDOA (hsa_circ_0038981), circFBXO24 (hsa_circ_0081481), circSATB2 (hsa_circ_0007422), circHTRA1 (hsa_circ_0020275), circCAPZA1 (hsa_circ_0013526), circSATB2 (hsa_circ_0003915), circMETTL15 (hsa_circ_0000282), circTULP4 (hsa_circ_0131196), circFARS2 (hsa_circ_0075533), circCASC15 (hsa_circ_0075826), circNSD1 (hsa_circ_0075166), circSIDT2 (hsa_circ_0024379), circEPB41L5 (hsa_circ_0056264), circNPRL3 (hsa_circ_0037127), circHELZ2 (hsa_circ_0001176), circGSE1 (hsa_circ_0040726), circTUBA8 (hsa_circ_0062191), circCHEK2 (hsa_circ_0004128), circMYO1F (hsa_circ_0008990), circPIGU (hsa_circ_0001142), and circLPAR1 (hsa_circ_0004928), or any of the significantly altered circRNAs between patients with BDD and Controls or patients with MDD shown in Table 12 (baseline BD vs baseline Contrls) and Table 13 (8 weeks after treatment BD vs Control 8 weeks after first visit) some of which are shown in sequences 1-241, or circRNAs altered after various types of treatment vs baseline in BDD patients regardless or not if these patients responded to such treatments (Table 14; BD 8 week vs BD R baseline), such as some of which are shown in sequences 1-241, as biomarkers facilitating the diagnosis of BDD in either whole blood or PBMCs or other blood-derived samples, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant or other form of psychiatric treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 12, 13, and 14 and shown in sequences 1-241 could be used alone or in conjunction with each other to diagnose BD in patients with or without depressive symptoms.

According to a specific embodiment, the present disclosure provides that circDDR1 (hsa_circ_0005133), circHERC4 (hsa_circ_0007997), circLAMA3 (hsa_circ_0047232), circCYP24A1 (hsa_circ_0060930), circSESN1 (hsa_circ_0077578), circTRIM69

(hsa_circ_0103668), circSLIT3 (hsa_circ_0074930), circHMGA2 (hsa_circ_0027446), circRPS2 (hsa_circ_0037376), circRASSF8 (hsa_circ_0025638), circHMMR (hsa_circ_0128496), circDUSP22 (hsa_circ_0075410), circICAM1 (hsa_circ_0049241), circRPL13 (hsa_circ_0092337), circCYP26B1 (hsa_circ_0055161), circMAPK6 (hsa_circ_0035301), circCCDC56 (hsa_circ_0043912), circPPP6R1 (hsa_circ_0000959), circXPO5 (hsa_circ_0076560), circULK4 (hsa_circ_0123780), circVDAC2 (hsa_circ_0007335), circNFATC3 (hsa_circ_0005615), circMALAT1 (hsa_circ_0002082), and circFKBP8 (hsa_circ_0050124), circSMARCA2 (hsa_circ_0001834), circARVCF (hsa_circ_0092330), circSKA3 (hsa_circ_0029696), circZNF236 (hsa_circ_0002799), circRTEL1-TNFRSF6B (hsa_circ_0061170), circGPATCH1 (hsa_circ_0050444), circCNOT1 (hsa_circ_0039626), circWDR37 (hsa_circ_0017449), circCMTM7 (hsa_circ_0005414), circDYSF (hsa_circ_0001029), circMIR5695 (hsa_circ_0130587), circDUS2L (hsa_circ_0039908), circRALGAPB (hsa_circ_0060342), circADAM22 (hsa_circ_0080968), circMYO9B (hsa_circ_0000907), circSETD2 (hsa_circ_0065149), circPCSK5 (hsa_circ_0087234), circZFR (hsa_circ_0072088), circUBR5 (hsa_circ_0001819) circSETD2 (hsa_circ_0002569), and circDLG5 (hsa_circ_0006649) (see also Fig. 27-28), or any of the significantly altered circRNAs between Sertraline responders (Sert R) and Sertraline non-responders (Sert NR) shown in Table 15 (baseline) and Table 16 (1 week after treatment) and included in sequences 1-241, as biomarkers predicting response or remission to Sertraline treatment in either whole blood or PBMCs or other blood-derived samples from patients with MDD, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 15, or 16 and sequences 1-241 could be used alone or in conjunction with each other to predict response or remission of MDD patients to Sertraline treatment.

According to a specific embodiment, the present disclosure provides that circDYSF (hsa_circ_0001029), circDDR1 (hsa_circ_0005133), circSTRN (hsa_circ_0054033), circTIAM2 (hsa_circ_0008289), circRANBP17 (hsa_circ_0004738), circHERC4 (hsa_circ_0007997), circTRIM28 (hsa_circ_0052372), circRPL13 (hsa_circ_0092337), circINCENP (hsa_circ_0000315), circGDI2 (hsa_circ_0005379), circSMAP2 (hsa_circ_0011898), circICAM1 (hsa_circ_0049241), circHABP4 (hsa_circ_0087631), circCALR (hsa_circ_0049637), circZNF646 (hsa_circ_0000691), circPREX1 (hsa_circ_0001167), circAP3S1 (hsa_circ_0002919), circZC3HC1 (hsa_circ_0082319), circBCKDHA (hsa_circ_0000937), circPDPN (hsa_circ_0010027), circDYSF (hsa_circ_0001029), circDDR1 (hsa_circ_0005133), circAMBRA1 (hsa_circ_0009155), circTTTY10 (hsa_circ_0142668), circHERC4 (hsa_circ_0007997), circANKRA2 (hsa_circ_0129585), circLCORL (hsa_circ_0125866), circTRIM28 (hsa_circ_0052372), circRPL13 (hsa_circ_0092337), circEIF4A2

(hsa_circ_0068464), circGDI2 (hsa_circ_0005379), circSMAP2 (hsa_circ_0011898), circICAM1 (hsa_circ_0049241), circTMEM39B (hsa_circ_0006349), circHABP4 (hsa_circ_0087631), circCALR (hsa_circ_0049637), circZNF646 (hsa_circ_0000691), circAP3S1 (hsa_circ_0002919), circZC2HC1 (hsa_circ_0082319), and circBCKDHA (hsa_circ_0000937) (see also Fig. 27-28), or any of the significantly altered circRNAs after 1 week of Sertraline treatment vs baseline (before treatment) in either responders (Sert R) or non-responders (Sert NR) to Sertraline shown in Table 17 (Sert R) and Table 18 (Sert NR) and included in sequences 1-241, as biomarkers predicting response or remission to Sertraline treatment in either whole blood or PBMCs or other blood-derived samples from patients with MDD, as well as other biological fluids including saliva and urine, either before treatment (baseline), or at various intervals after the start of antidepressant treatment. The backspliced junction sequences for some of these circRNAs are shown in Fig. 27, whereas the primers designed for their detection via PCR are shown in Fig. 28. Any of these circRNAs mentioned above in this paragraph and outlined in detail in Tables 17, or 18 and sequences 1-241 could be used alone or in conjunction with each other to predict response or remission of MDD patients to Sertraline treatment.

According to an embodiment, the present disclosure provides a composition, kit or assay, comprising a panel of at least 1 circRNA, wherein the circRNA is a biomarker for either predicting response or remission to antidepressant treatment, or diagnosis of MDD and BD, or evaluation of disease severity in a subject in need thereof. According to a further embodiment, the present disclosure provides a composition comprising a panel of at least 2 circRNAs, where the 2 circRNAs are circRNA biomarkers related to response or remission to antidepressant treatment, or diagnosis of MDD and BD, or evaluation of disease severity in a subject in need thereof. According to a still further embodiment, the present disclosure provides a composition comprising a panel of a plurality of circRNAs, where the plurality circRNAs are circRNA biomarkers related to response or remission to antidepressant treatment, or diagnosis of MDD and BD, or evaluation of disease severity in a subject in need thereof. In one embodiment, this plurality of circRNA biomarkers may include 3 or more, or 2 to 10, 2 to 25, 2 to 50, 2 to 100, 2 to 200, 2 to 500, 2 to 1000, 2 to 2000, or 2 to 4000, or more than 4000 circRNAs, where the circRNAs are brain disorder-associated circRNA biomarkers. According to an embodiment, at least one of the circRNAs in the composition may include one or a plurality of circRNAs shown in Tables 1-18 and/or sequences 1-241. According to an embodiment, at least one of the circRNAs in the composition may be circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69, or a circRNAs shown in Tables 1-18 and/or sequences 1-241.

According to an embodiment, the present disclosure provides an assay for the identification, diagnosis, screening, treatment and/or monitoring of a patient who has been or is

being diagnosed, treated for, or who is suspected of having MDD or BD. For the purposes of the present disclosure, the terms "patient" or "subject" refer to any animal (e.g., mammal), including, but not limited to, humans, non-human primates, equines, canines, felines, rodents, and the like.

In an embodiment, the assay may include obtaining or providing a sample from a patient or an individual with or with an increased risk for MDD or BD (family history of brain disease and/or genetic predisposition, or a person with developmental delay or other clinical symptoms that could be associated with increased risk for developing a brain disorder) and measuring the expression of one or more of the circRNA biomarkers disclosed herein to produce an expression profile. According to an embodiment, at least one of the circRNAs in the expression profile may be circTULP4. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circCDR1as. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circCHIC1. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circPICALM. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circSATB2. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circCOMT. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circRERE. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circMIR5695. According to another specific embodiment, at least one of the circRNAs in the expression profile may be DDX50. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circRALGAPB. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circICAM1. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circDDR1. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circADAM22. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circMALAT1. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circHMGA2. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circCYP24A1. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circDLG5. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circMYO9B. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circNFATC3. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circDUSP22. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circFKBP8. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circVDAC2. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circTRIM69. According to another specific

embodiment, at least one of the circRNAs in the expression profile may be selected from SEQ ID NOs. 1-241, or Tables 1-18. The assay may further include probes, or primers to detect one or more of the circRNAs described above.

The assay may further include the step of comparing the patient's expression profile to a baseline. For identification, diagnostic, screening, or risk assessment purposes, the baseline may be an expression profile derived from one or more unaffected individuals (i.e. "a control profile") or from one or more affected individuals (i.e. a "disease-state profile"). For treatment or monitoring purposes the baseline may be a control profile, disease state profile, or a previously obtained expression profile from the same individual. Because brain disorders such as MDD and BD tend to be highly inherited, there may circumstances wherein it is useful or informative for the baseline to be an expression profile derived from one or more individuals who are blood relatives of the patient.

According to some embodiments the assay may include or provide access to a database of expression profiles including, for example, control profiles, disease-state profiles, and the like. The database may include expression profiles from individuals or consolidated expression profiles from groups of individuals. The database may be curated such that all identifying information from any specific individual is scrubbed. The database may enable review of individual or consolidated expression profiles over time in order to, for example, monitor and/or evaluate disease progression, drug-response, therapy response, etc.

According to an embodiment, the sample may be, or may be produced from, a bodily fluid such as blood (including blood products such as serum, whole blood, plasma, and blood components and cells) cerebral fluid, saliva, urine, or blood from umbilical cords. According to another embodiment, the sample may be, or may be produced from, bodily tissue, such as a skin biopsy, umbilical cord tissue, or deciduous teeth.

According to a specific example, the sample may be neurons taken from the patient (such as those in the gut's enteric system) or derived from the patient from any cells from the aforementioned bodily fluids and tissues. For example, the neurons could be derived from induced pluripotent stem cells (iPSCs), embryonic stem cells, mesenchymal stem cells, or engineered somatic cells, which can in turn be derived from cells of bodily fluids and tissues as described by Kastenberg Z. J., et al, (2008) Alternative sources of pluripotency: science, ethics, and stem cells. Transplant Rev (Orlando) 22,215-222, which is hereby incorporated by reference for all purposes.

According to a specific embodiment, the neurons are derived from iPSCs. iPSCs are similar to embryonic stem cells (ESC) in that iPSCs can be expanded indefinitely at the pluripotent stage and are able to differentiate into all three primary germ layers and, therefore, potentially into all the cell types of the body. iPSCs are derived from somatic cells and the process does not involve the use of embryonic cells, removing ethnical concerns. Moreover,

iPSC cells can be derived from patient samples that are easily and even non-invasively obtained such as skin, saliva, blood, or urine samples.

According to various embodiments, the assay may include any number of sample preparation techniques and compositions including, for example, sample isolation and/or culturing and suitable reagents therefore, the use of suitable buffering solutions, etc.

According to another embodiment, the assay may include amplification of one or more brain disorder-associated circRNA biomarkers in a patient sample. Suitable amplification techniques include, for example, polymerase chain reaction (PCR), including Quantitative Real-Time PCR (qRT-PCR), reverse transcription PCR (RT-PCR), quantitative reverse transcription RT-PCR (QRT-PCR), Multiplex PCR, Nested PCR, Quantitative PCR, Hot-start PCR, Touchdown PCR, Assembly PCR, and droplet PCR.

In general, PCRs and qRT-PCRs employ the use of primers which are specifically designed to hybridize to and amplify a sequence of interest using multiple cycles of denaturation, annealing of primer pairs to opposite strands, and primer extension to exponentially produce copies of target nucleic acid sequence. Such PCRs can also be done following reverse transcription of RNA, including RNase-R-treated RNA. Accordingly, the present disclosure includes PCR and qRT-PCR primers that amplify at least a portion of one or more brain disorder-associated circRNA biomarkers to facilitate detection and/or quantification thereof.

According to an embodiment, at least one of the circRNAs being amplified may be selected from the group consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

According to an embodiment, at least one of the circRNAs being amplified may be selected from: a circRNA encoded by the nucleotide sequences according to SEQ ID NO. 1-124.

According to an embodiment, at least one of the circRNAs being amplified may be selected from: a circRNA encoded by the nucleotide sequences according to Tables 1-18.

According to an embodiment, at least one of the circRNAs being amplified may be MDD-a MDD treatment predictive circRNAs selected from: a circRNA encoded by the nucleotide sequences according to Tables 1-9.

According to an embodiment, at least one of the circRNAs being amplified may be a MDD and BD diagnosis-related circRNAs selected from: a circRNA encoded by the nucleotide sequences according to Tables 10-14.

According to an embodiment, at least one of the circRNAs being amplified may be a Sertraline treatment-related circRNAs selected from: a circRNA encoded by the nucleotide sequences according to Tables 15-18.

According to an embodiment, the assay may be or include a hybridization assay wherein a sample from a patient is obtained and interrogated using one or more probes designed to hybridize to one or more of the brain disorder-associated circRNA biomarkers or an amplicon thereof. Those of skill in the art will be familiar with a variety of different hybridization assays for detecting RNA including, but not limited to, microarrays, Northern blotting, PCR arrays, and other related technologies. Accordingly, the present disclosure provides probes that hybridize to one or more of the brain disorder-associated circRNA biomarkers disclosed herein or an amplicon thereof. Those of skill in the art will be familiar with the process for designing appropriate probes. Depending on the particular assay begin designed, it will be understood that the probes may be appropriately labeled. Examples of commonly used labels for hybridization assay probes include, for example, radiolabels, chemiluminescent labels, intercalating dyes, fluorochromes, etc.

According to an embodiment, the assay may be or include DNA or RNA sequencing techniques. Those of skill in the art will be familiar with a variety of sequencing techniques including, but not necessarily limited to, chain terminator (Sanger) sequencing, dye terminator sequencing, pyrosequencing and single-molecule sequencing, or Nanopore or other related long-read. In some cases, RNA sequences may be reverse transcribed into DNA sequencing prior to sequencing.

According to various embodiments, the present disclosure provides a kit comprising various reagents to enable the performance of one or more assays, including optionally instructions for use of the asay, wherein the assay comprises obtaining or providing a sample from a patient and measuring the expression of one or more circRNA biomarkers disclosed herein to produce an expression profile. The kit may include, for example, buffers, primers, and/or probes as needed in order to perform the assay. The kit may include only some or all of the reagents to complete the assay. The kit may further include a database or access to a database to which the expression profile obtained from the assay may be compared.

According to various embodiments, the present disclosure provides methods for the identification, diagnosis, screening, treatment, risk assessment, and/or monitoring of brain disorders such as MDD and BD. In general, the method comprises obtaining, providing, or receiving a patient sample; assaying the sample to determine the expression levels of one or more of the brain disorder-associated circRNA biomarkers disclosed herein; and comparing the expression level to a baseline profile. The baseline profile may be, for example, a control profile, a disease-state profile, or a previously obtained expression profile from the same individual or one or more blood relatives of the patient. Comparison of the expression level of one or more of the brain disorder-associated circRNA biomarkers in the patient sample to the baseline can then be used to identify, diagnose, screen, treat, assess risk, or monitor one or more brain disorders in the patient. For example, a specific expression profile compared to a baseline profile may indicate that a patient is more or less likely to respond to a particular

medication, or a specific dose of a given medication, such as antidepressants, or that a particular medication is or is not providing a benefit or has adverse effects. Such information can be used by the patient, a caretaker, or a medical provider to make both medical and non-medical decisions including, for example, starting, stopping, or changing medication(s), changing dosage(s), etc.

As used herein, a biological marker ("biomarker" or "marker") is a characteristic that is objectively measured and evaluated as an indicator of normal biologic processes, pathogenic processes, or pharmacological responses to therapeutic interventions, consistent with NIH Biomarker Definitions Working Group (1998). Markers can also include patterns or ensembles of characteristics indicative of particular biological processes. The biomarker measurement can increase or decrease to indicate a particular biological event or process. In addition, if the biomarker measurement typically changes in the absence of a particular biological process, a constant measurement can indicate occurrence of that process. The circRNA biomarkers may be used for diagnostic and prognostic purposes, as well as for therapeutic, drug screening and patient stratification purposes (e.g., to group patients into a number of "subsets" for evaluation), as well as other purposes described herein.

As used herein, "circular RNA" is understood as a circular polynucleotide that can encode at least one protein as define herein. The production of circRNAs can be performed using various methods provided in the art. For example, U.S. Pat. No. 6,210,931 teaches a method of synthesizing circRNAs by inserting DNA fragments into a plasmid containing sequences having the capability of spontaneous cleavage and self-circularization. U.S. Pat. No. 5,773,244 teaches producing circRNAs by making a DNA construct encoding an RNA cyclase ribozyme, expressing the DNA construct as an RNA, and then allowing the RNA to self-splice, which produces a circRNA free from intron in vitro. WO1992001813 teaches a process of making single strand circular nucleic acids by synthesizing a linear polynucleotide, combining the linear nucleotide with a complementary linking oligonucleotide under hybridization conditions, and ligating the linear polynucleotide. The person skilled in the art may also use methods provided in WO2015034925 or WO2016011222 to produce circular RNA. Accordingly, methods for producing circular RNA as provided in U.S. Pat. Nos. 6,210,931, 5,773,244, WO1992001813, WO2015034925 and WO2016011222 are incorporated herewith by reference.

The term "sequence identity" or "identity," as used herein in the context of two nucleic acid or polypeptide sequences, refers to the residues in the two sequences that are the same when aligned for maximum correspondence over a specified comparison window.

As used herein, the term "sequence identity" may refer to the value determined by comparing two optimally aligned sequences (e.g., nucleic acid sequences) over a comparison window, wherein the portion of the sequence in the comparison window may comprise additions or deletions (i.e., gaps) as compared to the reference sequence (which does not comprise additions or deletions) for optimal alignment of the two sequences. The percentage is calculated

by determining the number of positions at which the identical nucleotide or amino acid residue occurs in both sequences to yield the number of matched positions, dividing the number of matched positions by the total number of positions in the comparison window, and multiplying the result by 100 to yield the percentage of sequence identity. A sequence that is identical at every position in comparison to a reference sequence is said to be 100% identical to the reference sequence, and vice-versa.

An "expression vector" is a nucleic acid capable of replicating in a selected host cell or organism or *in vitro*. An expression vector can replicate as an autonomous structure, or alternatively can integrate, in whole or in part, into the host cell chromosomes or the nucleic acids of an organelle, or it may be used as a shuttle for delivering foreign DNA to cells, and thus replicate along with the host cell genome. Thus, expression vectors are polynucleotides capable of replicating in a selected in vitro system, host cell, organelle, or organism, e.g., a plasmid, virus, artificial chromosome, nucleic acid fragment, and for which certain genes on the expression vector (including genes of interest) are transcribed and translated into a polypeptide or protein within the cell, organelle or organism; or any suitable construct known in the art, which comprises an "expression cassette". In contrast, as described in the examples herein, a "cassette" is a polynucleotide containing a section of an expression vector. The use of the cassette assists in the assembly of the expression vectors. An expression vector is a replicon, such as plasmid, phage, virus, chimeric virus, or cosmid, and which contains the desired polynucleotide sequence operably linked to the expression control sequence(s).

A polynucleotide sequence is "operably linked to an expression control sequence(s)" (e.g., a promoter and, optionally, an enhancer) when the expression control sequence controls and regulates the transcription and/or translation of that polynucleotide sequence. As used herein, the phrase "gene product" refers to an RNA molecule, such as a circRNA or a protein. Moreover, the term "gene" may sometime refer to the genetic sequence, the transcribed and possibly modified mRNA of that gene, or the translated protein of that mRNA.

Notably, all DNA sequences provided may encompass all RNA and amino acid sequences, as well as primers and probes for detection of the same and vice versa as would be ascertainable by those of ordinary skill in the art, for example through Uracil substitutions as well as redundant codons. Additionally, all sequences include codon-optimized embodiments as would be ascertainable by those of ordinary skill in the art. As such, the term "encoding" or "coding sequence" or "coding" means both encoding a nucleotide and/or amino acid sequence and vice versa.

The terms "approximately" and "about" refer to a quantity, level, value or amount that varies by as much as 30%, or in another embodiment by as much as 20%, and in a third embodiment by as much as 10% to a reference quantity, level, value or amount. As used herein, the singular form "a," "an," and "the" include plural references unless the context clearly dictates otherwise.

The terms and expressions that have been employed are used as terms of description and not of limitation, and there is no intent in the use of such terms and expressions to exclude any equivalent of the features shown and described or portions thereof, but it is recognized that various modifications are possible.

Table 1 (SSRI R baseline vs SSRI NR baseline)

Exemplary Embodiments

The disclosure provides a composition comprising a panel of from 1 up to 20 or more circRNAs, where the circRNAs are MDD- or BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment. In one embodiment, at least one of the circRNAs in the expression profile may be circTULP4. In one embodiment, at least one of the circRNAs in the expression profile may be circCDR1as. In one embodiment, at least one of the circRNAs in the expression profile may be circCHIC1. In one embodiment, at least one of the circRNAs in the expression profile may be circPICALM. In one embodiment, at least one of the circRNAs in the expression profile may be circSATB2. In one embodiment, at least one of the circRNAs in the expression profile may be circCOMT. In one embodiment, at least one of the circRNAs in the expression profile may be circRERE. In one specific embodiment, at least one of the circRNAs in the expression profile may be circMIR5695. In one embodiment, at least one of the circRNAs in the expression profile may be DDX50. In one embodiment, at least one of the circRNAs in the expression profile may be circRALGAPB. In one embodiment, at least one of the circRNAs in the expression profile may be circICAM1. In one specific embodiment, at least one of the circRNAs in the expression profile may be circDDR1. In one specific embodiment, at least one of the circRNAs in the expression profile may be circADAM22. In one embodiment, at least one of the circRNAs in the expression profile may be circMALAT1. In one embodiment, at least one of the circRNAs in the expression profile may be circHMGA2. In one embodiment, at least one of the circRNAs in the expression profile may be circCYP24A1. In one embodiment, at least one of the circRNAs in the expression profile may be circDLG5. According to another specific embodiment, at least one of the circRNAs in the expression profile may be circMYO9B. In one embodiment, at least one of the circRNAs in the expression profile may be circNFATC3. In one embodiment, at least one of the circRNAs in the expression profile may be circDUSP22. In one embodiment, at least one of the circRNAs in the expression profile may be circFKBP8. In one embodiment, at least one of the circRNAs in the expression profile may be circVDAC2. In one embodiment, at least one of the circRNAs in the expression profile may be circTRIM69. In one embodiment, at least one of the circRNAs is

derived from the differentially altered circRNAs shown in tables 1-18. In one embodiment, at least one of the circRNAs is derived from the differentially altered circRNAs according to SEQ ID NOs. 1-241. In one embodiment, the circRNA or probe comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner.

Also provided is an assay for detecting MDD or BD comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker. In one embodiment, at least one of the circRNAs is circTULP4. In one embodiment, at least one of the circRNAs is circSATB2. In one embodiment, the circRNA, probe or PCR primer comprises a sequence selected from the group of sequences shown in Fig.27 (SEQ ID NO.'s 242-287) and Fig. 28 (SEQ ID NO.'s 288-433)or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof. In one embodiment, the circRNA or probe comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner. In one embodiment, the one or more primers are configured to amplify at least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker. It should be noted that the exemplary primers and sequences provided herein include a representative number of species directed to a representative number of circRNAs and is not intended to be exhaustive of the entire genus of possible primers useful to amplify circRNAs.

Also provided is an assay for detecting MDD or BD comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker selected from the circRNA biomarker according to Tables 1-18. In one embodiment, the circRNA, probe or PCR primer comprises a sequence selected from the group of sequences shown in Fig.27 and Fig. 28 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof. In one embodiment, the circRNA or probe comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner. In one embodiment, the one or more primers are configured to amplify at least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker.

Further provided is a method for assessing MDD or BD in a subject comprising: obtaining a sample from the patient; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; producing an expression profile of the one or more brain disorder-associated circRNA biomarkers based on the assay; and comparing the expression profile to a control.

The disclosure also provides for a composition comprising one or more isolated circRNAs selected from circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22,

circFKBP8, circVDAC2, or circTRIM69, or any combination thereof, one or more probes specific for circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or one or more primers specific for circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

A kit is provided comprising a panel of probes comprising probes specific for one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or comprising a plurality of primers specific

for one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

An assay is provided for detecting a mammal having or at risk of having MDD or BD, or for detecting response or remission to an anti-depressant in a mammal, comprising: one or more probes

configured to identify the presence of at least one circRNA selected from circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or one or more primers specific for circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69.

In one embodiment, the probe comprises a sequence specific for circCHIC1, circMIR5695, circRALGAPB, circCOMT, circDDX50, or a combination thereof.

In one embodiment, the probe comprises a sequence specific for circCHIC1, circCOMT, circPICALM, circDDX50, circRERE, or a combination thereof.

In one embodiment, one or more primers configured to amplify a sequence specific for two or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22,

circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

In one embodiment, the primer comprises a sequence specific for circCHIC1, circMIR5695, circRALGAPB, circCOMT, circDDX50, or a combination thereof.

In one embodiment, the primer comprises a sequence specific for circCHIC1, circCOMT, circPICALM, circDDX50, circRERE, or a combination thereof.

In one embodiment, the primer includes a sequence that spans the splice junction of the circRNA in an asymmetric manner.

Further provided is a method for diagnosing MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69 in the test sample using probes and/or primers configured to identify the presence of and/or amplify circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69.

A method is provided to predict response or remission to an anti-depressant in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69. in the test sample using probes and/or primers configured to identify the presence of and/or amplify circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69. In one embodiment, the anti-depressant is for MDD.

A method to monitor progression of, or relapse of, MDD or BD in a mammal is provided. The method includes providing a test physiological sample from the mammal; and comparing the presence or amount of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69 in the test sample to a sample from the mammal obtained at an earlier point in time.

In one embodiment, the step of detecting comprises one or more probes or primers that include a sequence that spans the splice junction of circCDR1as, circTULP4, circCHIC1,

circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69 in an asymmetric manner. In one embodiment, the sample is a physiological fluid sample. In one embodiment, the sample is a blood sample. In one embodiment, the sample is a cellular sample. In one embodiment, the mammal is a human.

In addition, a method for assessing MDD or BD in a subject is provided. The method includes providing a sample from the subject; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; and determining whether the sample has altered levels of the one or more brain disorder-associated circRNAs or a different expression profile of the one or more brain disorder-associated circRNAs relative to a control representing levels of the one or more brain disorder-associated circRNAs or an expression profile of the one or more brain disorder-associated circRNAs in non-MDD or non-BD humans.

All patents and publications referenced below and/or mentioned herein are indicative of the levels of skill of those skilled in the art to which the invention pertains, and each such referenced patent or publication is hereby incorporated by reference to the same extent as if it had been incorporated by reference in its entirety individually or set forth herein in its entirety. Applicants reserve the right to physically incorporate into this specification any and all materials and information from any such cited patents or publications.

WHAT IS CLAIMED IS:

1. A composition comprising one or more circRNAs, where the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

2. The composition of claim 1 wherein at least one of the circRNAs is circTULP4.

3. The composition of claim 1 or 2 wherein at least one of the circRNAs is circCDR1as.

4. The composition of claim 1, 2 or 3 wherein at least one of the circRNAs is circCHIC1.

5. The composition of any one of claims 1 to 4 wherein at least one of the circRNAs is circCOMT.

6. The composition of any one of claims 1 to 5 wherein at least one of the circRNAs is circPICALM.

7. The composition of any one of claims 1 to 6 wherein at least one of the circRNAs is circMIR5695.

8. The composition of any one of claims 1 to 7 wherein at least one of the circRNAs is circRALGAPB.

9. The composition of any one of claims 1 to 8 wherein at least one of the circRNAs is circRERE.

10. The composition of any one of claims 1 to 9 wherein at least one of the circRNAs is circDDX50.

11. The composition of any one of claims 1 to 10 wherein at least one of the circRNAs is circSATB2.

12. The composition of any one of claims 1 to 11 wherein at least one of the circRNAs is circICAM1.

13. The composition of any one of claims 1 to 12 wherein at least one of the circRNAs is is circDDR1.

14. The composition of any one of claims 1 to 13 wherein at least one of the circRNAs is circICAM1.

15. The composition of any one of claims 1 to 14 wherein at least one of the circRNAs is circADAM22.

16. The composition of any one of claims 1 to 15 wherein at least one of the circRNAs is circMALAT1.

17. The composition of any one of claims 1 to 16 wherein at least one of the circRNAs is circHMGA2.

18. The composition of any one of claims 1 to 17 wherein at least one of the circRNAs is circCYP24A1.

19. The composition of any one of claims 1 to 18 wherein at least one of the circRNAs is circDLG5.

20. The composition of any one of claims 1 to 19 wherein at least one of the circRNAs is circMYO9B.

21. The composition of any one of claims 1 to 20 wherein at least one of the circRNAs is circNFATC3.

22. The composition of any one of claims 1 to 21 wherein at least one of the circRNAs is circDUSP22.

23. The composition of any one of claims 1 to 22 wherein at least one of the circRNAs is circFKBP8.

24. The composition of any one of claims 1 to 23 wherein at least one of the circRNAs is circVDAC2.

25. The composition of any one of claims 1 to 24 wherein at least one of the circRNAs is circTRIM69.

26. The composition of any one of claims 1 to 25 wherein at least one of the circRNAs is derived from the differentially altered circRNAs shown in tables 1-18 and/or a sequence according to SEQ ID NO. 1-241.

27. An assay for detecting MDD or BD in a subject comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker.

28. The assay of claim 27 wherein the primer comprises a PCR primer sequence selected from the group of sequences according to SEQ ID NO.'s. 242-433, or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof.

29. The composition of any one of claims 27 to 28, wherein the primer comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner.

30. The assay of any one of claims 27 to 29, wherein the one or more primers are configured to amplify at least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker, and/or wherein the one or more probes are configured to identify least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker.

31. A method for assessing MDD or BD in a subject comprising: obtaining a sample from the patient; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; producing an expression profile of the one or more brain disorder-associated circRNA biomarkers based on the assay; and comparing the expression profile to a control, and optionally administering, changing, or discontinuing an antidepressant treatment for said subject based on the differential expression of

said brain disorder-associated circRNA biomarkers compared to said control, or a second sample from the subject after administration of an antidepressant treatment and wherein the antidepressant treatment optionally is selected from: administering a Selective Serotonin Reuptake Inhibitors (SSRIs), administering a serotonin and norepinephrine reuptake inhibitors (SNRIs), administering a Monoamine oxidase inhibitors (MAOIs), and optionally administering a tricyclic antidepressants, or any combination thereof.

32. A composition comprising one or more isolated circRNAs selected from circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or one or more primers specific for circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

33. A kit comprising a panel of probes comprising probes specific for one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or comprising a plurality of primers specific for one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

34. An assay for detecting a mammal having or at risk of having MDD or BD, or for detecting response or remission to an anti-depressant in a mammal, comprising: one or more probes configured to identify the presence of at least one circRNA selected from circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof, or one or more primers specific for circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

35. A method for diagnosing MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or

circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, in the test sample using probes and/or primers configured to identify the presence of and/or amplify circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or any combination thereof.

36. A method to predict response or remission to an anti-depressant in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, in the test sample using probes and/or primers configured to identify the presence of and/or amplify one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, or circTRIM69, or any combination thereof.

37. A method to monitor progression of, or relapse of, MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and comparing the presence or amount of one or more of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, in the test sample to a sample from the mammal obtained at an earlier point in time, or to a control sample.

38. The method of any one of claims above wherein the step of detecting comprises one or more probes or primers that include a sequence that spans the splice junction of any of circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, or circTRIM69, or any combination thereof, in an asymmetric manner.

39. An assay for detecting MDD or BD in a subject comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker selected from circRNAs shown in Tables 1-18, or any combination thereof.

40. An assay for detecting MDD or BD in a subject comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker selected from a circRNA shown in Tables 1-18, or any combination thereof, or

a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof.

41. The assay of claim 1 to 40 wherein the primer comprises a sequence selected from the group of sequences according to SEQ ID NO.'s. 242-433 or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof.

42. The composition of any one of claims 1 to 40, wherein the circRNA or probe or primer comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner.

43. The assay of any one of claims 1 to 40, wherein the one or more primers are configured to amplify at least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker, and/or wherein the one or more probes are configured to detect least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker.

44. A method for assessing MDD or BD in a subject comprising: obtaining a sample from the patient; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; producing an expression profile of the one or more brain disorder-associated circRNA biomarkers based on the assay; and comparing the expression profile to a control, wherein brain disorder-associated circRNA biomarkers comprise one or more circRNAs selected from the circRNAs shown in Tables 1-18.

45. A composition comprising one or more isolated circRNAs selected from the circRNAs shown in Tables 1-18, or any combination thereof, or one or more primers to amplify a one or more of the circRNAs shown in Tables 1-18, or any combination thereof.

46. A kit comprising a panel of probes comprising probes specific for one or more of the circRNAs shown in Tables 1-18, or any combination thereof, or comprising a plurality of primers to amplify one or more of the circRNAs shown in Tables 1-18, or any combination thereof.

47. An assay for detecting a mammal having or at risk of having MDD or BD, or for detecting response or remission to an anti-depressant in a mammal, comprising: one or more probes configured to identify the presence of at least one circRNA selected from the circRNAs shown in Tables 1-18, or any combination thereof.

48. A method for diagnosing MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of the circRNAs shown in Tables 1-18, or any combination thereof.

49. A method to predict response or remission to an anti-depressant in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of the circRNAs shown in Tables 1-18, or any combination thereof.

50. A method to monitor progression of, or relapse of, MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and comparing the presence or amount of the circRNAs shown in Tables 1-18, or any combination thereof,in the test sample to a sample from the mammal obtained at an earlier point in time, or against a control.

51. The method of any one of claims above wherein the step of detecting comprises contacting one or more probes or primers with a circRNAs that include a sequence that spans the splice junction of the circRNAs shown in Tables 1-18, or any combination thereof, in an asymmetric manner.

52. An assay for detecting MDD or BD in a subject comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker selected SEQ ID NO. 1-241, or any combination thereof.

53. An assay for detecting MDD or BD in a subject comprising: one or more probes or one or more primers configured to identify the presence of or amplify at least one brain disorder-associated circRNA biomarker selected from SEQ ID NO. 1-241, or any combination thereof, or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof.

54. The assay of any of claims 47, or 52 to 53 wherein the circRNA primer comprises a sequence selected from the group of sequences according to SEQ ID NO.'s. 242-433, or a sequence having at least 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% nucleic acid sequence identity thereto, or to the complement thereof.

55. The composition of any claim above, wherein the circRNA or probe comprises a sequence that spans the backspliced junction of the circRNA in an asymmetric manner.

56. The assay of any claim above, wherein the one or more primers are configured to amplify at least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker, and/or wherein the one or more probes are configured to detect least one MDD/BD- or antidepressant response/treatment-associated circRNA biomarker selected from the group consisting of SEQ ID NO. 1-241.

57. A method for assessing MDD or BD in a subject comprising: obtaining a sample from the patient; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; producing an expression profile of the one or more brain disorder-associated circRNA biomarkers based on the assay; and comparing the expression profile to a control, wherein brain disorder-associated circRNA

biomarkers comprising one or more isolated circRNAs are selected from SEQ ID NO. 1-241, or any combination thereof.

58. A composition comprising one or more isolated circRNAs selected from the circRNAs shown in Tables 1-18, or any combination thereof, or one or more primers specific for the circRNAs selected from the group consisting of SEQ ID NO. 1-241, or any combination thereof.

59. A kit comprising a panel of probes comprising probes specific for one or more of the circRNAs shown in Tables 1-18, or any combination thereof, or comprising a plurality of primers specific for one or more of the circRNAs selected from SEQ ID NO. 1-241, or any combination thereof.

60. An assay for detecting a mammal having or at risk of having MDD or BD, or for detecting response or remission to an anti-depressant in a mammal, comprising: one or more probes configured to identify the presence of at least one circRNA selected from SEQ ID NO. 1-241, or any combination thereof.

61. A method for diagnosing MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of one or more circRNAs selected from SEQ ID NO. 1-241, or any combination thereof.

62. A method to predict response or remission to an anti-depressant in a mammal, comprising: providing a test physiological sample from the mammal; and detecting the presence or amount of one or more circRNAs selected from SEQ ID NO. 1-241, or any combination thereof.

63. A method to monitor progression of, or relapse of, MDD or BD in a mammal, comprising: providing a test physiological sample from the mammal; and comparing the presence or amount of one or more circRNAs selected from SEQ ID NO. 1-241, or any combination thereof, in the test sample to a sample from the mammal obtained at an earlier point in time.

64. The method of any one of claims 61 or 62 wherein the step of detecting comprises one or more probes or primers that include a sequence that spans the splice junction of one or more circRNAs selected from SEQ ID NO. 1-241, or any combination thereof, in an asymmetric manner.

65. The method of any one of claims 31, 35-37, 44, 48-51, 57, or 61 to 64 wherein the sample is a physiological fluid sample.

66. The method of any one of claims 31, 35-37, 44, 48-51, 57, or 61 to 64 wherein the sample is a blood sample.

67. The method of any one of claims 31, 35-37, 44, 48-51, 57, or 61 to 64 wherein the sample is a cellular sample.

68. The method of any one of claims 31, 35-37, 44, 48-51, 57, or 61 to 64 wherein the mammal is a human.

69. A method for assessing MDD or BD in a subject comprising: providing a sample from the subject; assaying the sample using probes and/or primers configured to identify the presence of and/or amplify one or more brain disorder-associated circRNA biomarkers; and determining whether the sample has altered levels of the one or more brain disorder-associated circRNAs or a different expression profile of the one or more brain disorder-associated circRNAs relative to a control representing levels of the one or more brain disorder-associated circRNAs or an expression profile of the one or more brain disorder-associated circRNAs in non-MDD or non-BD humans.

70. A method of treating a MDD or BD condition in a patient who is predicted to benefit or not to benefit from therapeutic administration of an antidepressant treatment comprising:

- detecting in a first sample of a patient the expression levels of one or more MDD/BD- or antidepressant response/treatment-associated circRNA biomarkers to establish an expression profile of said patient;

- administering an antidepressant treatment to treat MDD or BD wherein the antidepressant treatment medication is selected from the group consisting of: Selective Serotonin Reuptake Inhibitors (SSRIs), serotonin and norepinephrine reuptake inhibitors (SNRIs), Monoamine oxidase inhibitors (MAOIs), and tricyclic antidepressants;

- detecting in a second sample of said patient the expression levels MDD- or BD-associated circRNA biomarkers or circRNA biomarkers after administration of said antidepressant treatment;

- correlating the levels of expression in said first and second samples to determine if the antidepressant treatment is effective at treating the condition, and continuing to administer the antidepressant treatment to treat MDD or BD based on said correlation, or stopping administering the antidepressant treatment to treat MDD or BD, or administering a different antidepressant treatment to treat MDD or BD.

71. The method of claim 70, wherein said sample comprises a physiological fluid sample.

72. The method of claim 71, wherein said physiological fluid sample comprises blood, cell, or tissue sample.

73. The method of claim 70, wherein said patient is a human.

74. The method of claim 70, wherein the circRNA biomarkers are selected from the group consisting of: a circRNA encoded by a nucleotide sequence according to SEQ ID NO. 1-241.

75. The method of claim 70, wherein the circRNA biomarkers are selected from a circRNA as shown in Tables 1-18.

76. The method of claim 70, wherein the circRNA biomarkers are selected from the group consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

77. The method of claim 70, wherein the circRNA biomarkers are selected from the group consisting of: a MDD-treatment predictive circRNA as shown in Tables 1-9.

78. The method of claim 70, wherein the circRNA biomarkers are selected from the group consisting of: a MDD and BD diagnosis-related circRNA as shown in Tables 10-14.

79. The method of claim 70, wherein the circRNA biomarkers are selected from the group consisting of: a Sertraline treatment-related circRNA as shown in Tables 15-18.

80. An assay kit for selecting a patient who is predicted to benefit or not to benefit from therapeutic administration of an antidepressant treatment comprising:
- a means for detecting in a sample of a patient the expression levels of one or more MDD/BD- or antidepressant response/treatment-associated circRNA biomarkers;
- a control selected from the group consisting of:
  - a control sample for detecting sensitivity to an antidepressant treatment;
  - a control sample for detecting resistance to the antidepressant treatment;
  - information containing a predetermined control level of the one or more biomarkers that has been correlated with sensitivity to the antidepressant treatment; and
  - information containing a predetermined control level of the one or more biomarkers that has been correlated with resistance to the antidepressant treatment.

81. The kit of claim 80, wherein said sample comprises a physiological fluid sample.

82. The kit of claim 81, wherein said physiological fluid sample comprises blood, cell, or tissue sample.

83. The kit of claim 80, wherein said patient is a human.

84. The kit of claim 80, wherein the circRNA biomarkers are selected from: a circRNA encoded by a nucleotide sequence according to SEQ ID NO. 1-241.

85. The kit of claim 80, wherein the circRNA biomarkers are selected from a circRNA as shown in Tables 1-18.

86. The kit of claim 80, wherein the circRNA biomarkers are selected from the group consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

87. The kit of claim 80, wherein the circRNA biomarkers are selected from a MDD-treatment predictive circRNA as shown in Tables 1-9.

88. The kit of claim 80, wherein the circRNA biomarkers are selected from a MDD and BD diagnosis-related circRNA as shown in Tables 10-14.

89. The kit of claim 80, wherein the circRNA biomarkers are selected from a Sertraline treatment-related circRNA as shown in Tables 15-18.

90. The kit of claim 80, wherein the control sample is a circRNA profile from said patient, a circRNA profile from a blood-relative of said patient, or a database of circRNA profiles.

91. An isolated primer configured to amplify a nucleotide sequence selected from SEQ ID NO. 1-241.

92. An isolated primer configured to amplify a circRNA sequence selected from the group of circRNAs show in Tables 1-18.

93. An isolated primer configured to amplify a circRNA sequence selected from circRNAs consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

94. An isolated probe configured to detect a circRNA nucleotide sequence selected from SEQ ID NO. 1-241.

95. An isolated probe configured to detect a circRNA sequence selected from circRNAs shown in Tables 1-18.

96. An isolated probe configured to detect a circRNA sequence selected from circRNAs consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1,

circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

97. An isolated circRNA selected from the group consisting of: SEQ ID NO. 1-241.

98. An isolated circRNA selected from the group of circRNAs shown in in Tables 1-18.

99. An isolated circRNA selected from the group of circRNAs consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

100. An expression vector encoding a circRNA, operably linked to a promoter, selected from the group consisting of: SEQ ID NO. 1-241.

101. An expression vector encoding a circRNA, operably linked to a promoter, selected from the group of circRNAs shown in Tables 1-18.

102. An expression vector encoding a circRNA, operably linked to a promoter, selected from the group of circRNAs consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69.

103. An assay configured to detect one or more circRNAs, where the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

104. An assay configured to detect one or more circRNA biomarkers selected from the group consisting of SEQ ID NO. 1-241, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

105. An assay configured to detect one or more circRNAs biomarkers shown in Tables 1-18 wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

106. An assay configured to detect one or more circRNAs biomarkers selected from the group consisting of: circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, and circTRIM69, wherein the circRNAs are (Major Depressive Disorder)

MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

107. An assay configured to detect one or more circRNAs biomarkers comprising at least one primer selected from the group consisting of: a primer according to SEQ ID NO. 242-287, or a combination of the same, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

108. An assay configured to detect one or more circRNAs biomarkers comprising at least one primer selected from the group consisting of: a primer according to SEQ ID NO. 288-433, or a combination of the same, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

109. An assay configured to detect one or more circRNAs biomarkers comprising at least one primer selected from the group consisting of: a primer configured to amplify a circRNA sequence shown in Tables 1-18, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

110. An assay configured to detect one or more circRNAs biomarkers comprising at least one primer selected from the group consisting of: a primer configured to amplify a circRNA according to SEQ ID NO. 1-241, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

111. An assay configured to detect one or more circRNAs biomarkers comprising at least one primer selected from the group consisting of: a primer configured to amplify circCDR1as, circTULP4, circCHIC1, circMIR5695, circRALGAPB, circCOMT, circPICALM, circDDX50, circRERE, or circSATB2, circICAM1, circDDR1, circADAM22, circMALAT1, circHMGA2, circCYP24A1, circDLG5, circMYO9B, circNFATC3, circDUSP22, circFKBP8, circVDAC2, circTRIM69, or a combination of the same, wherein the circRNAs are (Major Depressive Disorder) MDD- or (Bipolar Disorder) BD-associated circRNA biomarkers or circRNA biomarkers for predicting response or remission after antidepressant treatment.

112. The assay of any of claims 103 to 11, wherein said circRNAs biomarkers are detected in a physiological fluid sample.

113. The assay of claim 112, wherein the sample is a blood or cellular sample.

114. The assay of any of claims 112 to 113, wherein the sample is a human sample.

115. The assay of any of claims 103 to 114, wherein said antidepressant treatment comprises Selective Serotonin Reuptake Inhibitors (SSRIs), serotonin and norepinephrine reuptake inhibitors (SNRIs), Monoamine oxidase inhibitors (MAOIs), tricyclic antidepressants, or psychological therapy.
