

ADJUSTABLE SUPPORT COLUMN FOR FLOOR PANELS

ABSTRACT OF THE DISCLOSURE

An adjustable support column for supporting panels a controllable distance above a base surface to permit the panels to form a panelled surface, is disclosed which comprises a base plate (10) adapted to be installed on the base surface, an externally helically threaded pole (40) fixed at a lower end to a center portion of the base plate (10), and a support pedestal (30) adjustably mounted on the threaded pole (40) and having a top surface for support thereon of the panels (2). A plurality of banks (50a to 50d, 51a to 51d, 52a to 52d, 61a to 61d) are disposed on the top surface of the pedestal (30) for avoiding a direct contact between corners of the panels (2) which are supported from below by the pedestal (30).
