(54) Title: REAL-TIME EQUITY MONITORING SYSTEM, PROCESS AND INTERFACE

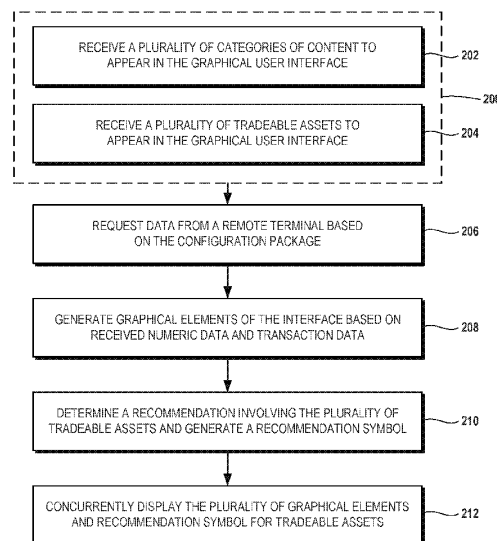

FIG. 2

(57) Abstract: Provided are a system and computer-based process of controlling operation of a display to generate an interface that presents content, for a plurality of different tradeable assets within a common region of the interface. A configuration package including a user-configurable selection of the tradeable assets and categories of content to be presented in the interface are received, and numeric data and transaction data are requested based on the configuration package. Graphical interface elements are generated, including an activity symbol, a dividend symbol, and a recommendation symbol. A signal is transmitted to cause the display to concurrently display, in a common region, each of the tradeable assets, the activity symbol, the dividend symbol and the recommendation symbol for each of the tradable assets.
