

ABSTRACT

Provided in the embodiments of the present disclosure are a database management method and apparatus. The database management method comprises: first, acquiring, based on a
5 current time, first incremental data of a database and a metadata list of the first incremental data; then, determining, based on the first incremental data, whether the database meets upscaling conditions; next, in response to determining that the database meets the upscaling conditions, executing a data validation on the first incremental data according to the metadata list to obtain validated incremental data; and finally, executing a data migration on
10 the validated incremental data based on a new database and the database to complete database upscaling management.
