

VORTEX FLOWMETER

ABSTRACT OF THE DISCLOSURE

A vortex flowmeter (10) for measuring fluid flow includes a conduit (18) having a wall (14) surrounding a bore for carrying the fluid along a bore axis. A pivoting member (22) moves in response to vortices in the fluid and extends from a hole (24) in the wall (14) into the bore, and sensing means (34) is provided for sensing the motion of the pivoting member (22) to provide a flow indicative output.
